Mr. Brian Zemcik
DuPont Fabros Development, LLC
1212 New York Avenue NW, Suite 900
Washington, DC 20005

Subject: Phase I Environmental Site Assessment

2000 & 2100 De La Cruz Boulevard and 505 Reed Street
2000-2070 & 2100-2160 De La Cruz Boulevard and 505-555 Reed Street
Santa Clara, California 95050
AEI Project No. 348184

Dear Mr. Zemcik:

AEI Consultants is pleased to provide the results of the Phase I Environmental Site Assessment (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

This assessment included a site reconnaissance, review of available historical records as well as research and interviews with representatives of the public, property ownership, on-site personnel, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Evans Howell at (650) 303-3856 or ehowell@aeiconsultants.com.

Sincerely,

M. Evans Howell, MS, REPA
Executive Vice President
AEI Consultants

PROJECT SUMMARY

VOC	Volatile Organic Compound

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DuPont Fabros Development, LLC to conduct a Phase I ESA in conformance with our proposal and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 2000-2070 & 2100-2160 De La Cruz Boulevard and 505-555 Reed Street in the City of Santa Clara, Santa Clara County, California. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5 and 1.6 of this report.

PROPERTY DESCRIPTION

The subject property, which consists of a data center and two commercial buildings, is located on the northwest corner of Reed Street and De La Cruz Boulevard in a mixed commercial and industrial area of Santa Clara, California. The property totals approximately 18.82 acres and is improved with a two-story computer data center building (505-555 Reed Street) totaling approximately 360,000 square feet and two one-story commercial buildings (2000-2070 and 2100-2160 De La Cruz Boulevard) totaling approximately 41,000 square feet. The buildings are slab-on-grade and are not constructed with basements or sub-grade areas. The subject property is currently occupied by DuPont Fabros Technology, data center (555 Reed Street), Praxair Distribution, Inc., compressed gas (2020 De La Cruz Boulevard) and Microlux Technology (2050 De La Cruz Boulevard). On-site operations consist of a computer data center and retail sales of compressed gas cylinders. Microlux Technology and the remainder of the tenant spaces are currently unoccupied. In addition to the subject property buildings, the property is improved with a storage shed, an electrical sub-station, and asphalt-paved parking areas and associated landscaping.

During the site reconnaissance, hazardous materials consisting of four 50,000-gallon diesel USTs, for fueling emergency generators, twenty 100-gallon diesel ASTs associated with emergency generators and cooling water treatment chemicals were observed in connection with operation of the data center. In addition, various compressed gas cylinders for retail sale were observed in association with the compressed gas sales facility. No environmental concerns associated with the storage and/or use of these materials was noted during the site reconnaissance or during the review of regulatory records. Please refer to Section 7.1 for additional information.

The subject property was identified in the regulatory database as a Facility Index System (FINDS), CA HAZNET, CA UST, RCRA-Non Generator (Non Gen/NLR), CA Facility Inventory Database (FID) UST, CA LUST, CA HIST LUST, CA Statewide Environmental Evaluation and Planning System (SWEEPS) UST, CA CORTESE, CA Emissions Inventory Data (EMI), CA Enforcement Action Listing (ENF), CA National Pollutant Discharge Elimination System (NPDES), CA SLIC, RCRA-Small Quantity Generator (SQG), and EDR US Historical Auto Station site. These listings are further discussed in Section 5.1.

Based on a review of historical sources, the subject property was identified to consist of agricultural land on the north portion and residences on the south portion, located along Reed Street from circa 1922 to 1929. By 1939 the north portion of the property was agricultural land and the south portion was developed with small commercial buildings along Reed Street. From at least 1955 to 1968 the south portion of the property (555 Reed Street) was commercial in use and included five commercial buildings and a lumber yard. Tenants included: Bayshore

Paper Company, Inc. (1955) and Pacific Redwood Casket Company (1957-1966). The north and west portions of the parcel were developed with seven to eight commercial buildings from at least 1969 to 2008 including 505-555 Reed Street and 500-520 Mathew Street. Tenants included Beaver Lumber Co. circa 1970 until the early 2000s. Other commercial/industrial tenants occupied the property including a building supply company from 1970 to 1980, lumber company from 1986 to 2001, a boat dealership in 1991, auto body repair shop from 1991 to 2001. By 2010 all of the buildings on the west portion of the property had been demolished except the building on the north portion of the property (500-520 Mathews Street). In 2011 the north building was demolished and the current building on the west portion of the subject property was constructed. DuPont Fabros Technology, data center has been the sole tenant since 2011.

The current building at 2100-2160 De La Cruz Boulevard was constructed in 1969. Tenants have included a variety of commercial/light industrial tenants including an appliance repair shop 1970 to 1980, office machine shop 1970 to 1991, a power tool shop from 1991 to 2008 and a printing company from 1991 to 2001. The current building at 2000-20709 De La Cruz Boulevard was constructed in 1971. Tenants have included a compressed gas store from 1975 to 2015, and a computer chip service company from 1996 to 2008.

The following historical addresses were associated with the subject property: 500-520 Mathew Street, 505-555 Reed Street, 2000-2070 De La Cruz Boulevard and 2100-2160 De La Cruz Boulevard. These addresses were also researched as part of this assessment.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Mathew Street followed by California Paperboard (525 Mathew Street)	CA LUST, CA HIST CORTESE, CA NPDES, RCRA-SQG, CA LUST, CA HIST LUST, CA EMI, CA NDS (525 Mathew Street)
East	Bauer's Intelligent Transportation (2290 De La Cruz Boulevard), J&J Acoustics (2260 De La Cruz Boulevard), vacant suite (2250 De La Cruz Boulevard), GotFloor.com (2240 De La Cruz Boulevard), followed by De La Cruz Boulevard, followed by Surface Mount Solutions (2219 De La Cruz Boulevard) Saks Real Estate (2075 De La Cruz Boulevard) De La Cruz Office Center (2005 De La Cruz Boulevard)	CA LUST, CA HIST LUST, CA HAZNET, CA HIST CORTESE, CA HIST UST (2290 De La Cruz Boulevard), RCRA-SQG, FINDS, CA HAZNET (2240 De La Cruz Boulevard) EDR US Historical Auto Station, RCRA-SQG, FINDS, CA HAZNET (2005 De La Cruz Boulevard)
South	Reed Street followed by Avis Budget Group (552 Reed Street) Akins Collision Center (530 Reed Street) Carbonic Service (1920 De La Cruz Boulevard)	RCRA-SQG, CA EMI (530 Reed Street), EDR US Historical Auto Station (556 & 558 Reed Street), CA LUST, CA HIST LUST, CA HIST CORTESE (1920 De La Cruz Boulevard)
Southwest	Intersection of Reed Street and railroad tracks, followed by Belgcars Auto Body (620 Reed Street)	EDR US Historical Auto Station

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
West	Southern Pacific railroad tracks followed by Leland's Marine (601 Reed Street), Motorspeed West (1925 Grant Street), Multi-tenant retail building (1945 Grant Street), Kapa Auto Body Parts (2005 Grant Street), Digital Realty data center (2045-2055 Lafayette Street), Bio Services Wood Recovery, Inc. (600 Mathew Street)	EDR US Historical Auto Station (2005 Grant Street), RCRA-SQG, FINDS, CA HAZNET, EDR US Historical Auto Station (2005 Grant Street) CA HIST UST, CA ENVIROSTAR, CA LUST, GA HIST LUS, CA HIST CORTESE
Northwest	Intersection of Mathew Street and railroad tracks, followed by Mustang Fever (611 Mathew Street)	Not identified

Please refer to Section 5.1 for discussion of adjacent sites listed in the regulatory database as noted above.

Based upon a 2005 Groundwater Monitoring Report and Petition for Case Closure Former Beaver Lumber Site 535 Reed Street, Santa Clara, CA, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast, and groundwater is presumed to be present at an estimated depth of 5 to 25 feet bgs.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- AEI did not identify evidence of on-site RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. AEI's assessment has revealed the following CRECs associated with the subject property or nearby properties:

- AEI did not identify evidence of on-site CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- The Beaver Lumber Co. is listed as a LUST site when five former petroleum USTs were removed from the site at 535 Reed Street in 1992. A release was reported following the removal of USTs on April 16, 1992. According to the CA State Water Resource Control Board the LUST case was officially closed by the Regional Water Quality Control Board (San Francisco Region) on February 7, 2002 following a secondary site investigation to address the 1992 release and also the removal of a 200-gallon waste oil UST that was not fully documented. A site investigation was conducted in June 1992 indicating some residual petroleum contamination (TPH-g and benzene) was present in the soils and groundwater in the vicinity of the former USTs.

On March 31, 2000 five exploratory borings were drilled and sampled. Soil samples contained up to 47 ppm TPH-g, 13 ppm TPH-d and 0.068 ppm MTBE. The maximum groundwater contamination (Boring B-2) contained 840 ppm TPH-g, 1,500 ppm TPH-d and 3,500 ppb benzene. MTBE was not detected in groundwater samples.

In January 2001 six additional exploratory borings were drilled to delineate the downgradient extent of contamination. Soil samples contained up to 1.92 ppm TPH-g and 0.02 ppm benzene. Groundwater samples contained up to 1.2 ppm TPH-g, 1.25 ppm TPH-d and 157 ppb benzene. MTBE was not detected in any soil or groundwater samples.

In February 2001, five additional exploratory borings were drilled. Soil samples were not collected. Groundwater samples collected from the furthest down-gradient wells contained up to 82 ppb TPH-g, 382 ppb TPH-d and 3.2 ppb benzene. A groundwater sample collected from GB-5, which was drilled in the same location as previously sampled boring B-1, contained 2,470 ppb TPH-g and 84 ppb benzene. MTBE was not detected in any groundwater samples. Groundwater samples were also collected from the three pre-existing monitoring wells, MW-1, MW-2 and MW-3. Samples collected from MW-1 and MW-3 were non-detect for all tested contaminants. A sample collected from MW-2 contained 103 ppb TPH-g and 21 ppb benzene.

The February 7, 2002 closure letter also addresses the successful removal of the 10,000 gallon split UST (4,000-gallon diesel & 6,000 gallon gasoline) in April 2001.

According to the RWQCB closure letter, the review of the analytical data indicated that the contaminant levels had significantly attenuated and that the majority of the residual contamination was confined to vicinity of former USTs #4 and #5 and residual contamination was expected to continually attenuate due to natural biodegradation and the Santa Clara Valley Water District staff recommended closure for the site. Based on the successful closure of the site on February 7, 2002, the former USTs at the Beaver Lumber site at 535 Reed Street are considered an HREC.

- According to the SLIC database and the San Francisco Bay State Water Resources Control Board records, the former Beaver Lumber Co. site at 535 Reed Street has undergone site investigations and remediation, beginning in 1985, due to pentachlorophenol (PCP) contamination from former wood treatment activities at the site. The PCP investigation and remediation effort was officially closed on March 9, 2006 by the Regional Water Quality Control Board. An aboveground PCP tank was located at the north end of the former equipment repair building at the west side of the property. From circa 1965 to the late 1980s, lumber

was treated with PCP by dipping it into the PCP tank and then suspending it above the tank for a few hours following the dipping process. The treated lumber was then placed on unpaved ground to dry. During the removal of a nearby waste oil UST in 1985, PCP was detected in a soil sample collected during the installation of a groundwater monitoring well (MW-3). The PCP dipping tank was removed from the subject property in the late 1980s. From October 2000 until 2006 multiple site investigations and remediation activities were conducted at the site including the investigations referenced above regarding the former petroleum USTs. These activities included more than 30 soil borings, the installation of 18 additional monitoring wells in addition to 3 preexisting wells, the excavation of the PCP dipping tank source area along with offsite disposal, the application of Oxygen Release Compound™ (ORC™) in to the excavated area, white rot fungus treatment of the excavated soil stockpile, cone penetrometer tests (CPTs) and the injection of Hydrocarbon Release Treatment™ (HRC™) in barrier configurations around the contaminant plume. In June 2003, the source area excavation was backfilled with 40 percent of the soil stockpile (the portion meeting reuse criteria) and the remaining cavity was backfilled clean fill. The remaining stockpiled soil that did not meet re-use criteria was transported off-site for disposal. Additional groundwater sampling events occurred from 2003 to 2005. The California Regional Water Quality Control Board (CRWQCB) issued an Order of Rescission of Site Cleanup Requirements (Order No. R2-2002-0092), for the PCP cleanup on March 10, 2006 which closed the case. Based on the remediation of the site and the closure issued by the CRWQCB, no further investigation of the site is needed and the former PCP contamination is considered a HREC.

Other Environmental Considerations warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property. AEI's assessment has revealed the following environmental considerations associated with the subject property or nearby properties:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.
- The subject property has four 50,000-gallon diesel USTs, two located east of the Phase I section and two located east of the Phase II section of the DuPont Fabros Technology Building. Two of the USTs were installed in 2011 and the other two were installed in 2015. The USTs are double walled fiberglass, equipped with a leak detection system and are used to fuel on-site emergency generators. The product piping is double-walled and equipped with leak-detection system. The review of reasonably ascertainable information pertinent to the status and operation of the storage tank system included Monitoring System Equipment Certification and Spill Bucket Testing for all four tanks performed in June 2015, did not reveal any reported discharges or gross compliance deficiencies. In the absence of any evidence to suggest the presence or likely presence of a release of petroleum products from

the USTs, and based on the age of the USTs, these USTs do not represent a REC. However, the user of this report should be aware that the environmental risk associated with the use of UST systems increases over time, as these systems age. DuPont Fabros Technology has applied to the CSCFD for UST permits for USTs No. 3 and 4 but has not yet received them.

- One 55-gallon drum of unidentified contents was observed inside Microlux at 2050 De La Cruz Boulevard. The 55-gallon drum was observed to be in excellent condition, stored indoors and there was no evidence of spill in the vicinity of the drum. AEI also observed two unidentified 55-gallon drums in a storage cage at the rear of Praxair Distribution, Inc. Mr. Danny Youngs, Inside Sales representative for Praxair informed AEI that the two 55-gallon drums contain excavated soils from beneath a former aboveground nitrogen storage tank that was removed in 2000. It is recommended that the contents of the drums be properly labeled and removed if no longer in use.
- According to the subject property owner, demolition of the subject property buildings at 2000-2070 and 2100-2160 De La Cruz Boulevard is planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.
- Due to the age of the subject property buildings at 2000-2070 and 2100-2160 De La Cruz Boulevard, there is a potential that LBP is present. AEI understands that demolition activities of the subject property buildings are planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 2000-2070 & 2100-2160 De La Cruz Boulevard and 505-555 Reed Street in the City of Santa Clara, Santa Clara County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5 and 1.6 of this report.

AEI did not identify evidence of RECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

DRAFT

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the proposal and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 2000-2070 & 2100-2160 De La Cruz Boulevard and 505-555 Reed Street in the City of Santa Clara, Santa Clara County, California (Figure 1: Topographic Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other environmental considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1) 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
- 2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
- 3) 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I ESA was limited by the following conditions:

- On September 3, 2015, AEI contacted the Santa Clara County Department of Environmental Health (SCCHEH) via email for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems. As of the writing of this report AEI had not received a response from the SCCDEH. AEI did obtain access to records at the City of Santa Clara Fire Department which is the Certified Unified Program Agency (CUPA) for the City of Santa Clara and maintains records regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons for the City of Santa Clara. Therefore this limitation is not expected to alter the findings of this report.
- Due to the proprietary nature of the data center suites at the DuPont Fabros Technology facility at 555 Reed Street AEI was denied access to all twenty of the data center suites. Given the reported use of these suites for computer hard drives and associated equipment, this limitation is not expected to alter the findings of this report.
- AEI was not provided access to a small storage building located at the rear of the Microlux suite at 2050 De La Cruz Boulevard and AEI was not provided any information regarding the contents of the storage building and was informed by the tenant Mr. Edic Silva that he could not answer any questions under the advice of his attorney. Microlux is no longer conducting operations at the subject property.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.

1.6 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	<p>The earliest historical resource obtained during this assessment were city directories from 1922 an aerial photograph from 1939. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure.</p> <p>In the 1922 city directory, the subject property was listed as a residence (537 Reed Road). In the 1939 aerial photograph, the north 2/3 of the subject property was agricultural land and the south 1/3 of the property appeared cleared with at least two small structures. Thus, it is assumed that prior to 1922; the subject property would have been used for residential or agricultural purposes, if not undeveloped. Therefore, this data failure is not expected to significantly alter the Findings of this assessment.</p>
Information/ Sources Consulted	City Directories and Aerial Photographs

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of DuPont Fabros Development, LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms and Conditions executed by DuPont Fabros Development, LLC on August 28, 2015. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Property Name	2000 & 2100 De La Cruz Boulevard and 505 Reed Street
Street Address(es)	2000-2070 & 2100-2160 De La Cruz Boulevard and 505-555 Reed Street
City	Santa Clara
State	California
Location	Northwest corner of Reed Street and De La Cruz Boulevard
Vicinity Characteristics	Commercial and industrial
Approximate Site Acreage/Source	18.82/Santa Clara County Assessor
Property Type	Commercial and industrial
Subject Property Use(s)	Office, retail and commercial
Assessor Parcel Number(s)	230-03-078, 230-03-079 and 230-03-104
SITE AND BUILDING INFORMATION	
Number of Buildings	4
Year(s) of Construction	1969, 1971 and 2011
Number of Floors/Stories	1 and 2
Basement or Subgrade Area(s)	None identified
Number of Units	10
Building Area (SF)/Source	21,000 (commercial building); 20,350 (commercial building); 360,000 (data center); and 240 (shed)/City of Santa Clara
Building Description(s)	2 one-story commercial buildings with presumed slab foundation, 1 one-story storage shed with presumed slab foundation and 1 two-story commercial building with presumed slab foundation occupied by a data center
Building Occupant(s)	DuPont Fabros Technology, data center (555 Reed Street), Praxair Distribution, compressed gas sales (2020 De La Cruz Boulevard) and Microlux Technology (2050 De La Cruz Boulevard). The remainder of the tenant spaces are unoccupied
Additional Improvements	Parking and landscaping
Current On-site Operations	Data center at 555 Reed Street and compressed gas cylinder sales. Microlux does not currently have any operations at 2050 De La Cruz Boulevard
Current Use of Hazardous Substances	Four 50,000-gallon diesel USTs, twenty 100-gallon diesel ASTs associated with emergency generators, cooling tower water treatment chemicals and compressed gases; refer to Section 7.1
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	PG&E
Electricity Provider	PG&E
Potable Water Provider or Source	Santa Clara Valley Water District
Sewage Disposal Provider or Treatment System	City of Santa Clara Water & Sewer Utilities
REGULATORY INFORMATION

Northwest	Intersection of Mathew Street and railroad tracks, followed by Mustang Fever (611 Mathew Street)	Not identified

Please refer to Section 5.1 for discussion of adjacent sites listed in the regulatory database as noted above.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the USGS, the area surrounding the subject property is underlain by alluvial deposits of the Quaternary-era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Urban land series. Soils from this series are characterized as silts, sands and silty and sandy clays. Based on groundwater monitoring data at the subject property groundwater is expected to be encountered at a depth of 5' bgs.	
USGS Topographic Map:	San Jose West, California Quadrangle
Nearest surface water to subject property:	Coyote Creek/0.75 mi. northeast
Gradient Direction/Source:	North-northeast/CA State Water Resources Control Board GeoTracker online database – 2005 Groundwater Monitoring Report and Petition for Case Closure Former Beaver Lumber Site 535 Reed Street, Santa Clara, CA
Estimated Depth to Groundwater/Source:	Estimated 5 to 25 feet bgs/ 2005 Groundwater Monitoring Report and Petition for Case Closure Former Beaver Lumber Site 535 Reed Street, Santa Clara, CA

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps and agency records is as follows:

Date Range	Subject Property Description/Use	Source(s)
Prior to 1922	Not found	None found (data failure); refer to Section 1.6.1 for discussion
1922-1929	Agricultural land on north portion and residences on south portion (529, 537 Reed Street)	Aerial photographs and city directories
1939	Agricultural land on north portion and residences or small commercial on south portion	Aerial photograph
1955	Bayshore Paper Company, Inc.	City directories
1956-1968	Northern portion of parcel agricultural land, southern portion occupied by four to five commercial buildings and lumber yard / Pacific Redwood Casket Company (555 Reed Street)	Aerial photographs, city directories and agency records, previous reports and Sanborn maps
1969-1974	Parcel developed with seven commercial buildings on the north and west sides of the parcel including 500-520 Mathew Street and 511-555 Reed Street. Both of the current commercial buildings on east side of the property were developed The building at 2100-2170 De La Cruz Boulevard was constructed in 1969 and the building at 2000-2070 De La Cruz Boulevard was constructed in 1971	Aerial photographs, city directories and agency records
1975-2008	Eight commercial buildings at 535-555 Reed Street and 500-520 Mathew Street. Current commercial buildings at 2000-2070 & 2100-2160 De La Cruz Boulevard	Aerial photographs, city directories and agency records
2010	All of property at 535-555 Reed Street is cleared except for warehouse on north portion of parcel, 500-520 Mathew Street Current commercial buildings at 2000-2070 & 2100-2160 De La Cruz Boulevard	Aerial photographs, city directories and agency records
2011-2015	Building on north portion of the parcel was demolished. Developed with current commercial improvements.	Aerial photographs, city directories and agency records

Based on a review of historical sources, the subject property was identified to consist of agricultural land on the north portion and residences on the south portion, located along Reed Street from circa 1922 to 1929. By 1939 the north portion of the property was agricultural land

and the south portion was developed with small commercial buildings along Reed Street. From at least 1955 to 1968 the south portion of the property (555 Reed Street) was commercial in use and included five commercial buildings and a lumber yard. Tenants included: Bayshore Paper Company, Inc. (1955) and Pacific Redwood Casket Company (1957-1966). The north and west portions of the parcel were developed with seven to eight commercial buildings from at least 1969 to 2008 including 505-555 Reed Street and 500-520 Mathew Street. Tenants included Beaver Lumber Co. circa 1970 until the early 2000s. Other commercial/industrial tenants occupied the property including a building supply company from 1970 to 1980, lumber company from 1986 to 2001, a boat dealership in 1991, auto body repair shop from 1991 to 2001. By 2010 all of the buildings on the west portion of the property had been demolished except the building on the north portion of the property (500-520 Mathews Street). In 2011 the north building was demolished and the current building on the west portion of the subject property was constructed. DuPont Fabros Technology, data center has been the sole tenant since 2011.

The current building at 2100-2160 De La Cruz Boulevard was constructed in 1969. Tenants have included a variety of commercial/light industrial tenants including an appliance repair shop 1970 to 1980, office machine shop 1970 to 1991, a power tool shop from 1991 to 2008 and a printing company from 1991 to 2001. The current building at 2000-20709 De La Cruz Boulevard was constructed in 1971. Tenants have included a compressed gas store from 1975 to 2015, and a computer chip service company from 1996 to 2008.

The following historical addresses were associated with the subject property: 500-520 Mathew Street, 505-555 Reed Street, 2000-2070 De La Cruz Boulevard and 2100-2160 De La Cruz Boulevard These addresses were also researched as part of this assessment.

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.

The subject property was historically used as a lumber company with yard, auto body shop, machine shop, printing company as well as several other commercial and industrial uses. Information obtained from the City of Santa Clara Fire Department (CSCFD) detailed the removal of one 10,000-gallon diesel UST from the north portion of the property at 520 Mathew Street, in November 1986. The tank was reportedly installed in 1975. Soil samples collected from the UST excavation pit were analyzed for total volatile hydrocarbons (TVH) and were found to be non-detect for TVH. The SCFD determined that a release from the UST did not occur.

Five additional USTs were removed in 1992 which included one 550-gallon waste oil UST, one 1,000-gallon diesel UST, one 2,000 gallon gasoline UST and two 10,000 gallon gasoline USTs, located on the south portion of the property. Elevated soil samples of TPH were documented. The release was reported to the CSCFD in 1992 and additional soil and groundwater assessment and remediation was performed between 2000 and 2002. The assessment activities also included a 200-gallon waste oil UST that was reportedly removed in 1985, but

was not documented as to location or closure activities. In addition, one 10,000-gallon split UST containing diesel and gasoline was removed in April 2001. According to the CA State Water Resource Control Board the LUST case was officially closed by the Regional Water Quality Control Board (RWQCB) on February 7, 2002 following a secondary site investigation to address the 1992 release. The 2002 closure included the 200-gallon waste oil UST as well as the 10,000-gallon UST removed in 2001.

Based on a Groundwater Monitoring Documentation Report and Petition for Case Closure, performed by Stellar Environmental Solutions, Inc., dated December 2005, an aboveground pentachlorophenol (PCP) tank was located at the north end of the former equipment repair building at the west side of the property. From circa 1965 to the late 1980s, lumber was treated with PCP by dipping it into the PCP tank and then suspending it above the tank for a few hours following the dipping process. The treated lumber was then placed on unpaved ground to dry. During the removal of a nearby waste oil UST in 1985, discussed above, PCP was detected in a soil sample collected during the installation of a groundwater monitoring well (MW-3). The PCP dipping tank was removed from the subject property in the late 1980s. From October 2000 until 2006 multiple site investigations and remediation activities were conducted at the site including the investigations referenced above regarding the former petroleum USTs. The PCP investigation and remediation was closed on March 9, 2006 by the Regional Water Quality Board. Additional information regarding historical tanks at the subject property are detailed in Sections 4.1.2, 4.1.3, 4.1.7, 5.1 and 6.3.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1939	Northern two-thirds of subject property appeared to be agricultural land. Southern third of property appears to be developed with two residences or small commercial buildings	North: Agricultural land East: De La Cruz Boulevard followed by agricultural land South: Reed Street followed by agricultural land with a developed area at east end of parcel West: Railroad tracks followed by agricultural land
1956	North half of property was agricultural land. South half of property is developed with four commercial structures and a lumber storage yard	North: Mathew Street followed by five commercial structures East: No significant changes South: Reed Street followed by five commercial structures West: Railroad followed by two commercial buildings and developed land
1965	No significant changes	North: Additional commercial development, similar to current conditions East: De La Cruz Boulevard followed by a commercial building and agricultural land South: Reed Street followed by six commercial structures West: No significant changes

Year(s)	Subject Property Description	Adjacent Site Descriptions
1974	Current commercial buildings at 2000-2070 & 2100-2160 De La Cruz Boulevard and seven to eight commercial buildings on north and west portions of the property	North: No significant changes East: Current commercial buildings 2240, 2250, 2260 and 2290 De La Cruz Boulevard and De La Cruz Boulevard followed by current commercial buildings at 2005, 2075 and 2115 De La Cruz Boulevard South: No significant changes West: No significant changes
1982	No significant changes	North: No significant changes East: No significant changes South: No significant changes West: Four commercial buildings
1993 1999	No significant changes	North: No significant changes East: No significant changes South: No significant changes West: Five commercial buildings
2006	No significant changes	North: No significant changes East: No significant changes South: No significant changes West: Current commercial buildings
2010	Commercial building on north portion of property (500-520 Mathew Street). However the buildings on the west portion of the property had been demolished (555 Reed Street). The current commercial buildings at 2000-2700 & 2100-2160 De La Cruz Boulevard remained	North: No significant changes East: No significant changes South: No significant changes West: Current commercial buildings

Environmental concerns with historical commercial uses as well as lumber storage yards are discussed in Sections 3.1, 4.1.2, 4.1.3, 4.1.7, 5.1 and 6.3.

If available, copies of historical aerial photographs are provided in the report appendices.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the Environmental Data Resources, Inc. (EDR) collection of Sanborn Fire Insurance maps.

The following maps were reviewed:

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Description
1961	Pacific Redwood Casket Company facility consisting of five structures located at 555 Reed Street including lumber storage and lumber piles	North: Mathew Street followed by Royal Fibre Corp. Paper Manufacturing Facility East: Not mapped South: Not mapped West: Southern Pacific Railroad followed by vacant lots and Myers Ceramics Products Co.
1966	Pacific Redwood Casket Company facility consisting of seven structures located at 555	North: No significant changes East: Not mapped

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Description
	Reed Street including a Mill building and Lumber storage building plus lumber storage and lumber piles	South: Not mapped West: No significant changes

Based on a review of Sanborn Fire Insurance maps the site to the north of the subject property and Mathew Street was occupied by a paper mill from 1961 through 1966 and the site located west of the Southern Pacific railroad and the subject property was occupied by a ceramics manufacturing facility from 1961 through 1966. The subject property at 555 Reed Street was occupied by the Pacific Redwood Casket Company from 1961 through 1966 and it included casket manufacturing, lumber storage and a lumber mill at the subject property. The subject property located at 2000-2070 and 2100-2160 De La Cruz Boulevard was not covered by the Sanborn Fire Insurance maps.

Environmental concerns with historical commercial uses as well as lumber storage yards are discussed in Sections 3.1, 4.1.2, 4.1.3, 4.1.7, 5.1 and 6.3.

If available, copies of historical Sanborn maps are provided in the report appendices.

3.4 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property by EDR. The following table summarizes the results of the city directory search.

City Directory Search Results

Year(s)	Address — Occupant Listed
1922	529 Reed Street – Vacant 537 Reed Street – J W Horning

XXXX: valid address but no occupancy information available

Based on a review of city directories the subject property was developed with two residences along Reed Street circa 1922-1929. In 1955 the subject property was developed with a paper company, Bayshore Paper. Beaver Lumber Company occupied the property at 535 Reed Street from circa 1970 until circa 2001. The north portion of the subject property at 500 Mathew Street was occupied by a building supply and lumber company from circa 1970 until 1986 and from circa 1991 until circa 2001 it was occupied by an auto body repair shop. The subject property at 520 Mathew Street was occupied by a lumber company, Simpson Timber Company from circa 1975 until circa 1980 and was subsequently occupied by another lumber company,

Northern Hardwood from circa 1986 until circa 2001. The subject property at 2000-2070 De La Cruz Boulevard was occupied by multiple commercial and warehouse tenants including a welding supply business from circa 1975 until circa 2013 and a computer chip service company, Microlux from circa 2001 until circa 2013. The subject property at 2100-2160 De La Cruz Boulevard was occupied by multiple commercial and warehouse tenants including an appliance service company from circa 1970 until circa 1975, an office equipment company from circa 1970 until circa 1991, and a printing company from circa 1991 until circa 2001. Environmental concerns associated with the historical use of the subject property identified during the city directory review are discussed in Sections 3.1, 4.1.2, 4.1.3, 4.1.7, 5.1 and 6.3.

If available, copies of historical city directories are provided in the report appendices.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On September 3, 2015, AEI contacted the Santa Clara County Department of Environmental Health (SCCHEH) via email for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems. As of the writing of this report AEI had not received a response from the SCCDEH.

AEI did obtain access to records at the City of Santa Clara Fire Department which is the Certified Unified Program Agency (CUPA) for the City of Santa Clara and maintains records regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons for the City of Santa Clara. Therefore this limitation is not expected to alter the findings of this report.

4.1.2 FIRE DEPARTMENT

On September 1 and 4, 2015, AEI contacted the City of Santa Clara Fire Department Fire Department (CSCFD)/Hazardous Material Division (HMD) via office visits for information on the subject property to identify any evidence of previous or current hazardous substance usage, and/or for any historical information available for the subject property. The Fire Prevention / Hazardous Materials Division is the Certified Unified Program Agency (CUPA) for the City of Santa Clara.

According to Ms. Monica Nguyen, the following information was on file for the subject property:

Records Reviewed

Date	Occupant	Document Type	Document Notes/Violations
1975	Beaver Lumber 500 Mathew Street	Permit to install UST	10,000 gallon steel diesel UST

A review of CSCFD files indicates the use and storage of hazardous substances at several of the former businesses that occupied the subject property including petroleum products stored in USTs and pentachlorophenol (PCP), for treating lumber, stored in an AST at the former Beaver Lumber Company facility at 535 Reed Street. The review also indicated the former presence of a diesel fuel UST at 500 Mathew Street. A summary of the documents associated regarding the former petroleum USTs at the subject property is presented below. Environmental concerns associated with the former PCP AST at 535 Reed Street are discussed in Section 5.1.

CSCFD UST Removal Permit, November 4, 1986

On November 4, 1986, one 10,000-gallon diesel fuel UST was removed from the Beaver Lumber Co. facility at 520 Mathew Street. Soil samples collected from the UST excavation pit were analyzed for total volatile hydrocarbons (TVH) and were found to be non-detect for TVH. The SCFD determined that a release from the UST did not occur. The former presence of the 10,000-gallon UST at 520 Mathew Street does not represent a significant environmental concern.

Soil Sampling Below Underground Storage Tanks, Soil Tech Engineering (STE), April 23, 1992

Following the removal of one 550-gallon waste oil UST, one 1,000-gallon diesel UST, one 2,000 gallon gasoline UST and two 10,000 gallon gasoline USTs, nine soil samples were collected from the respective tank excavation pits by Soil Tech Engineering (STE) at Beaver Lumber Co. at 535 Reed Street. The samples were analyzed for TPH, gasoline, diesel, benzene, toluene, ethyl benzene and xylene (BTEX), total oil and grease, lead and halogenated volatile organics. Two of the samples had concentrations of TPH, diesel and gasoline that exceeded cleanup action levels. STE recommended that a leaking UST incident report be submitted to the appropriate agencies and that further investigation of the release be conducted. The report also stated that a 200-gallon waste oil UST was removed from the subject property in 1985 and the removal and sampling was not properly documented and that STE included the 1985 UST removal as a concern with the 1992 UST release incident.

Underground Storage Tank Removal Permit, CSCFD, March 3, 1993

The report states that three USTs were removed from the site at 535 Reed Street on February 20, 1992 and two USTs were removed on April 16, 1992. Soil samples collected from the UST excavation pits were found to contain elevated concentrations of gasoline, diesel and TPH and Beaver Lumber Company was identified as the responsible party.

Environmental concerns associated with the five USTs that were removed from the subject property in 1992 are discussed Section 5.1 in association with a 2000-2001 subsurface site investigation at 535 Reed Street

UST Removal Report, Alpha Geo Services and Enviro Soil Tech Consultants (ESTC), May 14, 2001

The report states that one 10,000 gallon double walled fiberglass UST (two chambers; 6,000-gallon gasoline and 4,000-gallon diesel) was removed from the Beaver Lumber Co. facility at 535 Reed Street on April 29, 2001. Following the UST removal soil samples were analyzed for BTEX, MTBE, TPH diesel and gasoline. Two of the samples had detectable concentrations of TPH diesel but were well below action levels. A grab sample of water collected from the excavation pit was found to contain TPH diesel but well below action levels. ESTC recommended that the site was properly closed and no further site investigation was needed. Based on these findings, the former presence of the 10,000 gallon fiberglass UST does not represent a significant environmental concern.

Notification Letter of Planned Redevelopment Activities, Cornerstone Earth Group (CEG), April 25, 2008

This letter by CEG to The County of Santa Clara, Hazardous Compliance Division indicated that DuPont Fabros c/o Xeres Ventures LLC, planned to demolish the existing structures circa 2008 and develop a single-story, steel-framed data center facility with electrical substation, garage and asphalt concrete parking (current 505-555 Reed Street building). CEG summarized past removal and remediation activities at the site to include the SCFD and SCVWD oversight of the removal and assessment for several on-site former fuel and oil USTs. The SCVWD issued case closure (February 2002) for four tanks removed in 1992; no further action was required for the two additional tanks removed in 1986 and 2001. In addition the California Regional Water Quality Control Board (RWWQCB) issued case closure (March 2006) for the pentachlorophenol (PCP) release associated with the former Beaver Lumber facility. CEG outlined a Site

Management Plan describing the protocols for developing the property and handling materials suspected to be contaminated (i.e. residual contamination from former fuel or PCP tank areas). If soil or groundwater suspected to be contaminated was encountered the site contractor would stop work and the appropriate notifications would be performed.

The CSCFD CUPA file review also indicates the current use and storage of hazardous materials at the DuPont Fabros Technology facility at 555 Reed Street and at Praxair Distribution. Environmental concerns associated with the current use of hazardous substances at the subject property are discussed in further detail in Sections 5.1 and 7.1.

4.1.3 BUILDING DEPARTMENT

On September 1, 2015, AEI contacted the City of Santa Clara Planning & Inspection Department via office visit for information on the subject property in order to identify historical tenants, features of concern and property use.

Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

Year(s)	Owner/Applicant	Description of Permit/Building Use
1968	Beaver Lumber Co. 500 Mathew Street	Building
1971	Beaver Lumber Co. 500 Mathew Street	Building/Addition
1989	Downtown Truck & Trailer 500 Mathew Street	Building/Spray booth with sprinklers
1993	Premier Body Shop 500 Mathew Street	Building/New office and restrooms
2008	Premier Body Shop 500 Mathew Street	Hazardous Materials/Complete Closure Permit
2010	Holder Data Center 500 Mathew Street	Sewer Cap/Sewer caps for future demolition
2011	Ferma Corp. 500 Mathew Street	Demolition/Demolish buildings (500, 504, 512 & 520 Mathew Street)
1990	Northern Hardwoods 504 Mathew Street	LPG Tank/Install 172 gallon LPG tank
1992	American Camper 504 Mathew Street	LPG Tank/Install 575 gallon LPG tank
2001	Complete R V Service 504 Mathew Street	Hazardous Materials/Oil to be removed 6/12/2001
1956	W.J. Nicholson 535 Reed Street	Building/Storage building
1958	Pacific Redwood Casket Company 535 Reed Street	Certificate of Occupancy
1965	Beaver Lumber Co. 535 Reed Street	Building/Industrial building
1966	Beaver Lumber Co. 535 Reed Street	Building/Office building
1969	Beaver Lumber Co. 535 Reed Street	Building/Storage shed
1974	Beaver Lumber Co. 535 Reed Street	Building/Industrial warehouse

Year(s)	Owner/Applicant	Description of Permit/Building Use
1977	Beaver Lumber Co. 535 Reed Street	Building/Addition – warehouse building
1992	Beaver Lumber Co. 535 Reed Street	Remove five tanks, one 550-gallon waste oil, two 2,000 gallon and two 10,000-gallon gasoline tanks (USTs)
1992	Beaver Lumber Co. 535 Reed Street	Install one 10,000 gallon UST with two chambers; one 6,000-gallon gasoline chamber and one 4,000-gallon diesel chamber
2000	Beaver Lumber Co. 535 Reed Street	Demolition/Demolish buildings and construct new data center
2001	Beaver Lumber Co. 535 Reed Street	Remove 10,000 gallon UST with two chambers; one 6,000-gallon gasoline chamber and one 4,000-gallon diesel chamber
2001	Beaver Limber Co. 535 Reed Street	Complete Closure Permit
2005	Allen K. Ream 535 Reed Street	Architectural Review for site and building for car rental facility
2006	535 Reed Street	Demolition/Demolish four buildings
2006	535 Reed Street	Sewer caps/Install three sewer caps
2007	AVIS 535 Reed Street	Building/Interior alterations
2007	Avis Budget Rent a Car 535 Reed Street	Building/Interior alterations
2007	535-555 Reed Street	Demolish 222,374 sf buildings
2008	Xeres Ventures, LLC 535-555 Reed Street	Demolition/Demolish buildings and site
2008	Allen K. Ream 535 Reed Street	Lot line adjustment/Merge two parcels for 535 Reed Street and 520 Mathew Street
1996	Cope McPheters Marine 555 Reed Street	Building/Remodel boat storage facility
1999	Cope McPheters Marine 555 Reed Street	Complete Facility Closure Permit
1999	True Blue Sales, Inc. 555 Reed Street	Building/Install spray booth
2008	Ferma Corp. 555 Reed Street	Demolition/Demolish 10 buildings
2008	Xeres Ventures	Building/Build new 360,000 sf Data Center building
2010	DuPont Fabros Technology 555 Reed Street	Install Underground Storage Tank Permit/Phase II add two storage tanks (50,000 gallons per tank) and install diesel fuel product piping, transition sump and valve boxes
2010	DuPont Fabros Technology 555 Reed Street	Install 16 day tanks for generators (100 gallons each) including piping, 2 tanks per engine generator room
2011	555 Reed Street	Building/Install refrigeration unit
2011	Holder Data Center 555 Reed Street	Building/Install server racks
2013	DuPont Fabros Technology 555 Reed Street	Install Aboveground Storage Tank Permit/Install eight 150-gallon day tanks for eight optional generators with associated piping
2014	SC-1 Data Center	Install Aboveground Storage Tank Permit/Install

Year(s)	Owner/Applicant	Description of Permit/Building Use
	555 Reed Street	eight 150-gallon day tanks for eight optional generators
2014	Cupertino Electric 555 Reed Street	Building/Install server racks
2015	Xeres Ventures LLC 555 Reed Street	Mitigated Negative Declaration for new Data Center building at 2020-2070 and 2100-2160 De La Cruz Boulevard
1971	Beaver Lumber Co. 2000 De La Cruz Boulevard	Building & Plumbing/Construct industrial one-story building slab-on-grade
1978	Beaver Lumber Co. 2000 De La Cruz Boulevard	Building/Install partitions
1997	A Touch of Magic 2000 De La Cruz Boulevard	Building/Split building space, interior alterations
2000	Pete Krieger 2000 De La Cruz Boulevard	Special/Annual industrial show demonstration
1985	Lin Data Corp. 2010 De La Cruz Boulevard	Building/Shipping room addition
1972	Beaver Lumber Co. 2020 De La Cruz Boulevard	Building/Interior partitions
1984	Robert Dolva 2020 De La Cruz Boulevard	Building/Install nitrogen tank partitions
1986	Gerin Welding Sales 2020 De La Cruz Boulevard	Tent permit/Install tents
1990	Gerin Welding Sales 2020 De La Cruz Boulevard	(Aboveground Storage Tank) Tank Installation Permit/9,000-gallon nitrogen AST, 3,000-gallon argon AST and 14-ton carbon dioxide
1997	Edic Sliva 2020 De La Cruz Boulevard	Building/Remodel interior
1971	B. L. Co. 2070 De La Cruz Boulevard	Building/Alteration install office and lab
1983	Nashua Lin Data 2070 De La Cruz Boulevard	Plumbing/Add area drain
1984	Robert Johnson 2070 De La Cruz Boulevard	Building, Electric & Plumbing/Add equipment, partial demolition and add stairway
1997	Edic Sliva 2070 De La Cruz Boulevard	Building/Interior demolition
1997	Al Carpenter 2070 De La Cruz Boulevard	Building, Electric, Plumbing and Mechanical/Split suite and alter interior
1998	A Touch of Magic 2070 De La Cruz Boulevard	Building/Alter exterior
1998	Hubanson Santal Clara Properties 2070 De La Cruz Boulevard	Building/Build 240 sf storage shed
2002	Microelectronic Component Corp. 2070 De La Cruz Boulevard	Hazardous Material Facility Closure Permit/Complete Closure Permit
1969	Beaver Lumber Co. 2100 De La Cruz Boulevard	Building/Erect 20,350 sf one-story, slab-on-grade building at 2100-2160 De La Cruz Boulevard
1983	Allen Ream 2100 De La Cruz Boulevard	Building, Electrical & Mechanical/Alter interior
1993	Allen Ream 2100 De La Cruz Boulevard	Building/Demolish non-bearing walls
2000	Central Coating Co. Inc.	Re-Roofing Permit/Re-roof front overhang of entire

Year(s)	Owner/Applicant	Description of Permit/Building Use
	2100 De La Cruz Boulevard	building
1969	B. L. Co. 2130 De La Cruz Boulevard	Building/Complete interior
1982	Allen Ream 2130 De La Cruz Boulevard	Electrical & Mechanical/Wire AC unit, replace furnace
2002	C & J Construction Inc. 2130 De La Cruz Boulevard	Building/Alter interior, upgrade restrooms
2003	Pelican Signs 2130 De La Cruz Boulevard	Electrical/Add electrical for new "Bosch" sign
1969	B. L. Co. 2140 De La Cruz Boulevard	Mechanical/Install gas piping and two heating units
1969	B. L. Co. 2140 De La Cruz Boulevard	Building, Electrical, Plumbing & Mechanical/Erect partitions and mezzanine
1978	Allen Ream 2140 De La Cruz Boulevard	Building/Minor remodeling
1989	Arius Alarm Co. 2140 De La Cruz Boulevard	Building, Electrical & Mechanical/Alter interior

1969	B. L. Co. 2160 De La Cruz Boulevard	Building, Electrical, Plumbing & Mechanical/Erect partitions and mezzanine
2008	Cupertino Electric 2160 De La Cruz Boulevard	Electrical/Repair meter section

A review of building permits indicates that a building permit was issued to Beaver Lumber Co. in 1968 for the subject property at 500 Mathew Street and that Premier Body Shop occupied this property from circa 1989 to 2008 and it was likely to store and use hazardous materials associated with auto body repair shops. A hazardous materials facility closure permit was issued to Complete RV Service at 504 Mathew Street in 2001 indicating the use of hazardous materials associated with an auto repair facility. Environmental concerns associated with the former presence of auto repair and auto body repair facilities at 500 and 504 Mathew Street are discussed in Section 5.1.

A building permit was issued for the subject property in 1956 and this facility was occupied by the Pacific Redwood Casket Co. circa 1958. Building permit records indicate that the Beaver Lumber Co. occupied this site from circa 1965 to circa 2001. Building permit records for the installation and removal of petroleum USTs for the subject property are consistent with CSCFD UST records for the subject property. A building permit was issued to True Blue Sales Inc. at 555 Reed Street for the installation of a spray booth indicating the use of hazardous materials associated with paint booths.

In 2010 a permit was issued to DuPont Fabros Technology for the installation of two 50,000 gallon diesel fuel USTs and sixteen 100-gallon diesel fuel ASTs at 555 Reed Street. In 2013 a permit was issued to DuPont Fabros Technology for the installation of eight 150-gallon diesel fuel ASTs at 555 Reed Street. In 2014 another permit was issued to DuPont Fabros Technology for the installation of eight 150-gallon diesel fuel ASTs at 555 Reed Street. Environmental concerns associated with the current presence of the diesel fuel USTs and ASTs at 555 Reed Street are discussed in Sections 5.1 and 7.1.

A building permit was issued to the Beaver Lumber Co. in 1969 for the construction of a one-story building at 2100-2160 De La Cruz Boulevard and a building permit was issued to the Beaver Lumber Co. in 1971 for the construction of a one-story building at 2000-2070 De La Cruz Boulevard. In 1990 a building permit was issued to Gerin Welding Sales for the installation of a 9,000 gallon nitrogen, 3,000-gallon argon and 14-ton carbon-dioxide aboveground compressed gas storage tanks.

4.1.4 PLANNING DEPARTMENT

On September 1, 2015, AEI contacted the City of Santa Clara Department of Planning & Inspection for information on the subject property in order to identify AULs associated with the subject property.

AEI spoke with a Planner, who informed AEI that the three parcels at the subject property are zoned MH, Heavy Industrial and that there is no evidence indicating the existence of AULs was on file for the subject property with the department.

4.1.5 COUNTY ASSESSOR OFFICE

On September 1, 2015, AEI visited the Santa Clara County assessor's office website for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Santa Clara County assessor's website, the current building construction dates were not listed. A plat map with parcel numbers and acreage information was reviewed. The subject property is made up of three parcels which total 18.82 acres.

4.1.6 OIL AND GAS WELLS/PIPELINES

On September 7, 2015, AEI reviewed the California Department of Oil, Gas and Geothermal Resources (DOGGR) Well Finder website to access maps concerning the subject property and nearby properties. The maps contain information regarding oil and gas development.

According to the DOGGR map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.1.7 OTHER AGENCIES SEARCHED

On August 28, 2015, AEI contacted the Santa Clara Valley Water District (SCVWD) via telephone for information regarding wells at the subject property. According to a *Documentation Report for Destruction of 10 A-Zone Monitoring Wells* issued by Stellar Environmental Solutions, Inc. (Stellar) on March 23, 2006, following the closure of the PCP contamination case at 535 Reed Street, the SFRWQCB requested that eleven (11) on-site monitoring wells be properly decommissioned. Stellar reported that it could not access one of the on-site monitoring wells (MW-16S), due to a large pile of construction debris on top of the well. Stellar did decommission the remaining 10 wells and included regulatory documentation in the appendices of the report. AEI contacted the Santa Clara Valley Water District (SCVWD) on August 28, 2015 to inquire about the presence of any wells at the subject property. The SCVWD informed AEI that there are currently no wells at the subject property and that all former wells have been abandoned.

On August 28, 2015, AEI reviewed the Department of Toxic Substances (DTSC) Hazardous Waste Tracking System (HWTS) for any records regarding the subject property and the following former tenants were listed as historic generators of hazardous waste:

Records Reviewed

Date	Occupant	Document Type	Address/Notes
2009	ABB Inc.	EPA ID - Haz. Waste Gen.	504 Mathew Street/Inactive
1991	Francis Winkel	EPA ID - Haz. Waste Gen.	535 Reed Street/Inactive
1992	Beaver Lumber Co.	EPA ID - Haz. Waste Gen.	535 Reed Street/Inactive
2008	DuPont Fabros Tech.	EPA ID - Haz. Waste Gen.	535 Reed Street/Inactive
2008	Xeres Ventures, LLC	EPA ID - Haz. Waste Gen.	535 Reed Street/Inactive
2005	Avis Rent a Car	EPA ID - Haz. Waste Gen.	535 Reed Street/Inactive
2010	Holder Data Center Builders LP	EPA ID - Haz. Waste Gen.	555 Reed Street/Inactive
2011	Cupertino Electric	EPA ID - Haz. Waste Gen.	555 Reed Street/Inactive
2015	Nalco Company	EPA ID - Haz. Waste Gen.	555 Reed Street/Active – quantity not listed
2020	Praxair Distribution Inc.	EPA ID - Haz. Waste Gen.	2020 De La Cruz Boulevard/Inactive
1998	Microelectronics Components	EPA ID - Haz. Waste Gen.	2070 De La Cruz Boulevard/Inactive
1996	Affinity Ontyme Printing & Graphics	EPA ID - Haz. Waste Gen.	2100 De La Cruz Boulevard/Inactive – generated wastes between 1996-2004
1998	VOE Inc.	EPA ID - Haz. Waste Gen.	2120 De La Cruz Boulevard/Inactive
1993	Prussia Graphics	EPA ID - Haz. Waste Gen.	2120 De La Cruz Boulevard/Inactive – generated wastes in 1993, 1994
2001	Robert Bosch Tool Corp.	EPA ID - Haz. Waste Gen.	2130 De La Cruz Boulevard/Inactive – generated waste from 2000-2010
2007	Fault Line Express, Inc.	EPA ID - Haz. Waste Gen.	2140 De La Cruz Boulevard/Inactive – generated waste in 2007
2005	Liberty Lighting & Fixture Supply	EPA ID - Haz. Waste Gen.	2130 De La Cruz Boulevard/Active – generated waste from 2005-2009

Environmental concerns associated with the former and current generation of hazardous waste at these subject property facilities is discussed in Sections 5.1 and 7.1.

On August 28, 2015, AEI reviewed the following online databases for any records regarding the subject property: DTSC Envirostor, and State Water Resources Control Board GeoTracker databases.

The Department of Toxic Substances (DTSC) Envirostor database did not have any records for the subject property.

The State Water Resources Control Board GeoTracker databases did not have any records for the subject property at 2000-2070 and 2100-2160 De La Cruz Boulevard. The GeoTracker database has multiple documents regarding the site investigation and cleanup at 535 Reed Street associated with PCP contamination at the former Beaver Lumber Co. facility at the site. According to the GeoTracker database the site was remediated and the case was closed on March 9, 2006. Environmental concerns associated with the PCP release and subsequent investigation and cleanup at 535 Reed Street is discussed in section 5.1.

On September 3, 2015, submitted an online FOIA request to the Bay Area Air Quality Management District (BAAQMD) regarding the subject property. The BAAQMD informed AEI that they did not have any records regarding the subject property except for the following records for 2070 De La Cruz Boulevard:

Records Reviewed

Date	Occupant	Document Type	Document Notes/Violations
1987	Nashua Computer Products Corp.	BAAQMD Record: Project title: Vapor degreaser	Final Disposition: A/C granted 3/3/1987
1989	Nashua Computer Products Corp.	BAAQMD Record	Principal product: Magnetic media Ceased operation: 5/25/1989
1992	Nashua Computer Products Corp.	BAAQMD Record	Principal product: Magnetic media Ceased operation: 7/1/1992 Closed
1998	Nashua Computer Products	BAAQMD Record: New Facility/Semiconductor	Waived A/C, 12/17/98
2002	Microelectronics Components	BAAQMD Record	Ceased operation: 10/22/2002 Closed

BAAQMD records indicate that between circa 1987 to circa 2002 computer facilities conducted operations at 2070 De La Cruz Boulevard that generated air emissions as documented by the BAAQMD. Environmental concerns associated with the use of hazardous substance at this site that generated air emissions are discussed in Section 5.1.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources, Inc. (EDR) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix B of this report.

The subject property was identified in the regulatory database report as follows: FINDS, CA HAZNET, CA UST, RCRA-Non Gen/NLR, CA FID UST, CA LUST, CA HIST LUST, CA SWEEPS UST, CA CORTESE, CA EMI, CA ENF, CA NPDES, CA SLIC, RCRA-SQG, and EDR US Historical Auto Station. See Section 5.1 for additional discussion.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes, No or N/A)
NPL	1	No	0	N/A
DELISTED NPL	0.5	No	0	N/A
CERCLIS	0.5	No	1	No; based on distance and/or hydrological gradient from the subject property
CERCLIS NFRAP	0.5	No	8	No; based on regulatory status, distance and/or hydrological gradient from the subject property
RCRA CORRACTS	1	No	3	No; based on regulatory status, distance and/or hydrological gradient from the subject property

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes, No or N/A)
RCRA-TSDF	0.5	No	0	
RCRA LQG, SOG, CESQGS, VGN, NLR	SP/ADJ	Yes	8	No; however, these properties are discussed below
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	
STATE/TRIBAL HWS	1	No	53	No; however, two sites are discussed below. The remaining sites are not considered a significant environmental concern based on regulatory status, distance and/or hydrological gradient from the subject property
STATE/TRIBAL SWLF	0.5	No	2	No; based on distance and/or hydrological gradient from the subject property
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	Yes	5	No; subject property is discussed below
STATE/TRIBAL LUST	0.5	Yes	97	No; subject property and three adjacent properties are discussed below. The remaining sites are not considered a significant environmental concern based on regulatory status, distance and/or hydrological gradient from the subject property
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	2	No; based on regulatory status, distance and/or hydrological gradient from the subject property
STATE/TRIBAL BROWNFIELD	0.5	No	1	No; however, site is discussed below

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes, No or N/A)
ORPHAN	N/A	No	3	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	Yes	34	No; subject property and an adjacent properties are discussed below

SP: subject property
ADJ: adjacent property

Facility Name:	Beaver Lumber Co.
Database(s):	CA UST, CA FID UST, CA LUST, CA SLIC, CA HIST LUST, CA SWEEPS UST, CA HIST UST, CA Cortese, CA EMI, CA ENF, CA HIST CORTESE, EDR US Historic Auto Station and CA NPDES
Address:	535 Reed Street,
Distance:	Subject Property
Direction:	Subject Property
Comments:	<p>The Beaver Lumber Co. is listed as a due to a petroleum release which was discovered when five former petroleum USTs were removed from the site at 535 Reed Street in 1992. These included one 500-gallon waste oil UST, two 1,000-gallon gasoline USTs and two 10,000-gallon gasoline USTs. The release was reported following the removal of USTs on April 16, 1992. The USTs were located on the south portion of the subject property (Figure 2a). A site investigation was conducted in June 1992 indicating some residual petroleum contamination (TPG-g and benzene) was present in the soils and groundwater in the vicinity of the former USTs.</p> <p>On March 31, 2000 Five exploratory borings were drilled and sampled. Soil samples contained up to 47 ppm TPH-g, 13 ppm TPH-d and 0.068 ppm MTBE. The maximum groundwater contamination (Boring B-2) contained 840 ppm TPH-g, 1,500 ppm TPH-d and 3,500 ppb benzene. MTBE was not detected in groundwater samples.</p> <p>In January 2001 six additional exploratory borings were drilled to delineate the downgradient extent of contamination. Soil samples contained up to 1.92 ppm TPH-g and 0.02 ppm benzene. Groundwater samples contained up to 1.2 ppm TPH-g, 1.25 ppm TPH-d and 157 ppb benzene. MTBE was not detected in any soil or groundwater samples.</p> <p>In February 2001, five additional exploratory borings were drilled. Soil samples were not collected. Groundwater samples collected from the furthest down-gradient wells contained up to 82 ppb TPG-g, 382 ppb TPH-d and 3.2 ppb benzene. A groundwater sample collected from GB-5, which was drilled in the same location as previously sampled boring B-1, contained 2,470 ppb TPH-g and 84 ppb benzene. MTBE was not detected in any groundwater samples. Groundwater samples were also collected from the three pre-existing monitoring wells, MW-1, MW-2 and MW-3. Samples collected from MW-1 and</p>

Facility Name:	Beaver Lumber Co.
Database(s):	CA UST, CA FID UST, CA LUST, CA SLIC, CA HIST LUST, CA SWEEPS UST, CA HIST UST, CA Cortese, CA EMI, CA ENF, CA HIST CORTESE, EDR US Historic Auto Station and CA NPDES
<p>MW-3 were non-detect for all tested contaminants. A sample collected from MW-2 contained 103 ppb TPH-g and 21 ppb benzene.</p> <p>According to the CA State Water Resource Control Board the LUST case was officially closed by the Regional Water Quality Control Board (RWQCB) on February 7, 2002 following a secondary site investigation to address the 1992 release and also the removal of a 200-gallon waste oil UST in 1985 that was not fully documented. The February 7, 2002 closure letter also addresses the successful removal of one 10,000 gallon split UST (4,000-gallon diesel & 6,000 gallon gasoline) in April 2001.</p> <p>According to the RWQCB closure letter, the review of the analytical data indicated that the contaminant levels had significantly attenuated and that the majority of the residual contamination was confined to vicinity of former USTs #4 and #5 and residual contamination was expected to continually attenuate due to natural biodegradation and the Santa Clara Valley Water District staff recommended closure for the site. Based on the successful closure of the site on February 7, 2002 the presence of the former USTs at the Beaver Lumber site represent a HREC.</p> <p>According to the SLIC database and the San Francisco Bay State Water Resources Control Board (SFBRWQCB) the former Beaver Lumber Co. site at 535 Reed Street has undergone site investigations and remediation beginning in 1985 due to pentachlorophenol (PCP) contamination from former wood treatment activities at the site (Case# 43s0958). The PCP investigation and remediation was closed on March 9, 2006 by the Regional Water Quality Board. Based on a Groundwater Monitoring Documentation Report and Petition for Case Closure, performed by Stellar Environmental Solutions, Inc., dated December 2005, an aboveground PCP tank was located at the north end of the former equipment repair building at the west side of the property. From circa 1965 to the late 1980s, lumber was treated with PCP by dipping it into the PCP tank and then suspending it above the tank for a few hours following the dipping process. The treated lumber was then placed on unpaved ground to dry. During the removal of a nearby waste oil UST in 1985, discussed in previous paragraphs, PCP was detected in a soil sample collected during the installation of a groundwater monitoring well (MW-3). The PCP dipping tank was removed from the subject property in the late 1980s. From October 2000 until 2006 multiple site investigations and remediation activities were conducted at the site including the investigations referenced above regarding the former petroleum USTs. These activities included more than 30 soil borings, the installation of 18 additional monitoring wells in addition to 3 preexisting wells, the excavation of the PCP dipping tank source area along with offsite disposal, the application of Oxygen Release Compound™ (ORC™) in to the excavated area, white rot fungus treatment of the excavated soil stockpile, cone penetrometer tests (CPTs) and the injection of Hydrocarbon Release Treatment™ (HRC™) in barrier configurations around the contaminant plume. In June 2003, the source area excavation was backfilled with 40 percent of the soil stockpile (the portion meeting reuse criteria) and the remaining cavity was backfilled clean fill. The remaining stockpiled soil that did not meet re-use criteria was transported off-site for disposal. Additional groundwater sampling events occurred from 2003 to 2005. Groundwater flow was to the north-northeast and depth to groundwater ranged from 5 to 25 feet below grade. The California Regional Water Quality Control Board (CRWQCB) issued an Order of Rescission of Site Cleanup Requirements (Order No. R2-2002-0092) for the PCP cleanup on March 10, 2006 which closed the case. Based on the remediation of the site and the closure issued by the CRWQCB, no further investigation of the site is needed and the former PCP contamination is considered a HREC.</p>	

Facility Name:	Xeres Ventures LLC
Database(s):	CA UST

Facility Name:	Xeres Ventures LLC
Database(s):	CA UST
Address:	555 Reed Street
Distance:	Subject Property
Direction:	Subject Property
Comments:	The facility is listed as UST site 43-010-701989, permitted by the City of Santa Clara. No other information is listed for this site. Based on the lack of documented release at this site, this listing does not represent a significant environmental concern.

Facility Name:	Simpson Building Supply Co.
Database(s):	CA HIS UST, EDR US Historical Auto Station
Address:	500 Mathew Street
Distance:	Subject Property
Direction:	Subject Property
Comments:	<p>The address was formerly located on the north side of the subject property. The facility was listed as a US EDR Historical Auto Station as Premier Body Shop from 1999 to 2008 and Toyota Body Repairs by Premier in 2003. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the historical information gathered for the subject property during this time period from aerial photographs, city directories and agency records. A gas station was not located on the subject property.</p> <p>According to the HIST UST database a 10,000-gallon diesel UST was installed at the Simpson Building Supply Co. facility at 500 Mathew Street in 1975. According to CSCFD records the UST was successfully removed from the site in 1986 (Section 4.1.2, Figure 2a). Soil samples collected from the UST excavation pit were analyzed for total volatile hydrocarbons (TVH) and were found to be non-detect for TVH. The SCFD determined that a release from the UST did not occur. Based on the lack of documented release at this site, this listing does not represent a significant environmental concern.</p>

Facility Name:	American Camper
Database(s):	CA HAZNET, RCRA-SQG, FINDS, EDR US Historical Auto Station
Address:	504 & 512 Mathew Street
Distance:	Subject Property
Direction:	Subject Property
Comments:	<p>The address was formerly located on the north side of the subject property. The facility was listed as a US EDR Historical Auto Station as Complete RV Service & Repair in 2002. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the historical information gathered for the subject property during this time period from aerial photographs, city directories and agency records. A gas station was not located on the subject property.</p> <p>According to the RCRA-SQG database the former American Camper facility at 504 and 512 Mathew Street generated small quantities of hazardous waste (oxygenated solvents, acetone, butanol, ethyl acetate, etc.) in 1993, 1994, 1995 and 1996. No violations were listed. Based on the lack of documented release at this site, this listing does not represent a significant environmental concern.</p>

Facility Name:	Affinity Ontyme Printing & Graphics, S B Power Tool Co.
----------------	---

Database(s):	FINDS, CA HAZNET, RCRA-SQG
Address:	2100 De La Cruz Boulevard, 2130 De La Cruz Boulevard
Distance:	Subject Property
Direction:	Subject Property
Comments:	According to the FINDS and CA HAZNET database Affinity Ontyme Printing & Graphics is listed as an annual generator of small quantities of photochemicals/photo processing waste from 1998 to 2002 and again in 2004. According to the RCRA-SQG database S B Power Tool Co. generated small quantities of D007 (Chromium) and D008 (Lead) listed hazardous waste in 2000. No violations were listed. Based on the lack of documented releases at this site, the former generation of small quantities of the wastes referenced above does not represent a significant environmental concern.

Facility Name:	Nashua Computer Products
Database(s):	RCRA Non Gen/NLR, FINDS
Address:	2070 De La Cruz Boulevard
Distance:	Subject Property
Direction:	Subject Property
Comments:	According to the RCRA Non Gen/NLR database, Nashua Computer Products is listed as a Non-Generator of hazardous waste in 1992. No violations were listed. The listing of Nashua Computer Products as a non-generator of hazardous waste does not represent a significant environmental concern.

Facility Name:	California Paperboard Co.
Database(s):	CA LUST, CA HIST CORTESE, CA NPDES, RCRA SQG, CA HIST LUST, CA EMI, CA WDS
Address:	525 Mathew Street
Distance:	Adjacent
Direction:	North (hydrologically downgradient)
Comments:	According to the CA LUST database a release of diesel fuel from a UST at the site was reported on January 8, 1991 and as of December 22, 2014 verification monitoring continues at the site. Based on the contaminants of concern and the site being downgradient from the subject property, this listing is not expected to represent a significant environmental concern.

Facility Name:	Intex Auto Parts, Hopper Inc.
Database(s):	CA LUST, CA HIST LUST, CA HIST UST, CA HAZNET, CA HIST CORTESE, CA NPDES
Address:	2290 De La Cruz Boulevard
Distance:	Adjacent
Direction:	East (hydrologically cross-gradient)
Comments:	This facility reportedly had one 2,000-gallon gasoline UST. No installation or removal dates were reported. According to the CA LUST database the site is currently undergoing quarterly monitoring for groundwater contamination from a release of gasoline from a UST at the site in 1985. Based on the fact that the facility is under regulatory oversight, long term monitoring and its cross-gradient location this facility is not expected to represent a significant environmental concern.

Facility Name:	Akins Collision Center
Database(s):	RCRA-SQG, CA EMI, EDR US Historical Auto Station
Address:	530 Reed Street
Distance:	Adjacent
Direction:	South (hydrologically up gradient)

Facility Name: Akins Collision Center
Database(s): RCRA-SQG, CA EMI, EDR US Historical Auto Station
Comments: According to the RCRA-SQG database is listed as an annual generator of small quantities of hazardous waste in 1992. No violations were listed. The facility was listed as a US EDR Historical Auto Station as Akins Body Shop Inc. from 2001-2010. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the lack of documented releases at this site, the former generation of small quantities of the wastes referenced above does not represent a significant environmental concern.

Facility Name: Sam Sung Body Shop
Database(s): EDR US Historical Auto Station
Address: 556 Reed Street
Distance: Adjacent
Direction: South (hydrologically up gradient)
Comments: The facility was listed as a US EDR Historical Auto Station as Sam Sung Body Shop from 1999-2000. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the fact that this facility was not located on any other databases and lack of documented releases at this site, this listing does not represent a significant environmental concern.

Facility Name: Chayas Auto Service
Database(s): EDR US Historical Auto Station
Address: 558 Reed Street
Distance: Adjacent
Direction: South (hydrologically up gradient)
Comments: The facility was listed as a US EDR Historical Auto Station as Chayas Auto Service in 2000. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the fact that this facility was not located on any other databases and lack of documented releases at this site, this listing does not represent a significant environmental concern.

Facility Name: Accura Technology Inc., Satnam Petroleum Inc., Auto Trade Ctr., Attarco Motor & Transmission Corp.
Database(s): RCRA-SQG, CA HAZNET, EDR US Historical Auto Station
Address: 2005 De La Cruz Boulevard
Distance: Adjacent
Direction: South (hydrologically up gradient)
Comments: According to the RCRA-SQG database is listed as an annual generator of small quantities of photochemicals/photo processing waste in 1994. No violations were listed. The facility was listed as a US EDR Historical Auto Station as Satnam Petroleum. from 2003-2004, Auto Trade Center in 2005, Attarco Motor & Transmission Corp. from 2007-2009 and Alliance Motor & Transmission in 2010. This database does not report a release, but rather identify businesses, based on

Facility Name:	Accura Technology Inc., Satnam Petroleum Inc., Auto Trade Ctr., Attarco Motor & Transmission Corp.
Database(s):	RCRA-SQG, CA HAZNET, EDR US Historical Auto Station
name, that may have been associated with an auto station. Based on the lack of documented releases at this site, the former generation of small quantities of the wastes referenced above does not represent a significant environmental concern.	

Facility Name:	Able Auto Body & Paint Shop, Seafarers Auto Body, BNG Vikings West Coast Auto Body
Database(s):	EDR US Historical Auto Station
Address:	620 Reed Street
Distance:	Adjacent
Direction:	Southwest (hydrologically up gradient)
Comments: The facility was listed as a US EDR Historical Auto Station as Able Auto Body & Paint Shop in 1999, Seafarers Auto Body from 2002-2006, BNG Vikings West Coast Auto Body from 2007-2009. This database does not report a release, but rather identify businesses, based on name, that may have been associated with an auto station. Based on the fact that this facility was not located on any other databases and lack of documented releases at this site, this listing does not represent a significant environmental concern.	

Facility Name:	Nelson Bros. Trucking Company
Database(s):	CA HIST UST, CA LUST, CA ENVIROSTOR, CA HIST LUST, CA VCP, CA SWEEPS UST, CA FID UST, CA EMI
Address:	600 Mathew Street
Distance:	Adjacent
Direction:	Northeast (hydrologically up-gradient)
Comments: This facility reportedly had two 12,000-gallon diesel UST, one 2,000-gallon (contents not reported), one 5,000-gallon unleaded UST, and one 500-gallon waste oil UST. All six USTs were reportedly installed in 1978. The site reported a discharge in 2001, based on a Preliminary Endangerment Assessment Report, no further action was required. The facility obtained No Further Action status in March 2001. Based on the current regulatory status, this facility is not expected to represent a significant environmental concern.	

Facility Name:	Provenzano Brothers
Database(s):	CA BROWNFIELDS
Address:	1850 De La Cruz Boulevard
Distance:	0.094 mi.
Direction:	South (hydrologically crossgradient)
Comments: According to the SWRCB GeoTracker database during a site investigation at this property groundwater samples were found to contain concentrations of PCE (up to 440 ppb) and TCE (up to 120 ppb) and the source of the contamination has not yet been determined. Given the distance and cross-gradient location of this site, this facility is not considered a significant environmental concern.	

Facility Name:	Lombardo Diamond Core Drilling
Database(s):	CA SLIC, CA DEED, CA ENVIROSTOR, CA CHMIRS, CA Cortese, CA ENF, CA HIST CORTESE
Address:	585 Roberts Avenue

Facility Name:	Lombardo Diamond Core Drilling
Distance:	0.039 mi.
Direction:	North-northwest (hydrologically downgradient)
Comments:	According to the CA SLIC database the site currently has an Open status involving verification monitoring regarding metals contamination in soils and groundwater resulting from historic zinc plating operations at the site. Based on the contaminants of concern and the site being downgradient from the subject property it is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner's representative, Mr. Brian Zemcik, Senior Director of Development with DuPont Fabros Technology, was contacted via e-mail on September 1, 2015. Mr. Zemcik has been associated with the subject property since 2010. Mr. Zemcik stated the subject property is occupied by a data center and two commercial buildings which are connected to municipal water and sewer service. Mr. Zemcik indicated AEI completed previous environmental assessments on the subject property in 2007 and 2009. Mr. Zemcik was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The key site manager Mr. Brian Zemcik of DuPont Fabros Technology, is also the property owner representative. Refer to Section 6.1.1.

6.1.3 PAST OWNERS, OPERATORS AND OCCUPANTS

In attempt to interview past owners, operators and occupants regarding historical on-site operations, AEI requested the contact information for these entities from the current subject property owner representative, Mr. Zemcik. Mr. Zemcik was unable to provide the contact information for the past owners, operators and occupants. Other methods of researching the contact information for past owners, operators and occupants are performed by AEI when a data gap is encountered and/or if an item of environmental concern is identified for the subject property, which include reviewing historical agency records and/or online research, none of which were encountered during the course of this investigation. As such, interviews with past owners, operators and occupants regarding historical on-site operations were not reasonably ascertainable.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Brian Zemcik of DuPont Fabros Technology. Sections 6.2.1 through 6.2.6 represent information contained therein.

6.2.1 ENVIRONMENTAL LIENS

AEI was not informed by the User, DuPont Fabros Technology, represented by Mr. Brian Zemcik, of any environmental cleanup liens encumbering the subject property that are filed or recorded under federal, tribal, state or local law.

6.2.2 ACTIVITY AND LAND USE LIMITATIONS

AEI was not informed by the User of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law.

6.2.3 SPECIALIZED KNOWLEDGE

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

6.2.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

6.2.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The User did not inform AEI of any commonly known or reasonably ascertainable information about the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

6.2.6 KNOWLEDGE OF PRESENCE OR LIKELY PRESENCE OF CONTAMINATION

The User did not inform AEI of any obvious indicators that pointed to the presence or likely presence of contamination at the subject property.

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

Documentation was provided to AEI by AEI during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment 2100-2160 De La Cruz Boulevard, Santa Clara, California 95050 , prepared by AEI Consultants (May 31, 2007)

The Assessment stated that the subject property was historically used for agricultural purposes until it was developed with the current commercial building in 1969 and that a Certificate of Occupancy for the property was issued to Beaver Lumber Company in 1965. The report stated that the property was occupied by several commercial/light industrial tenants since at least 1980 including a commercial printing company from 1991-2001 and a computer products company from 1980 until 1986. The report concluded that no RECs or HRECs were identified at the site and that no further investigation of the property was needed at that time.

Phase I Environmental Site Assessment 500-520 Mathew Street, Santa Clara, California 95050
, prepared by AEI Consultants (May 31, 2007)

The Assessment stated that the subject property was historically used for agricultural purposes until a one-story 49,000 square foot warehouse building was constructed at the site in 1968 by the Beaver Lumber Company. Simpson Building Supply and Timber occupied the site from 1970 until 1986 and Northern Hardwood, Inc. occupied the site from at least 1991 until 2001. After 2001 the subject property was occupied by Premier Auto Body Shop, Complete RV Repair Shop and the California Paper Shop were tenants at the subject property.

The Assessment did not identify any RECs but did identify the following HRECs:

- Agency records indicate that a 10,000-gallon diesel fuel UST was removed from the site on November 4, 1986. Confirmation samples collected after the UST removal, were non-detect and the CSCFD concluded that a release from the UST did not occur and AEI concluded that the former presence of the UST is not expected to represent a significant environmental concern.
- The south adjacent property, Beaver Lumber Company, at 535 Reed Street was identified in the SLIC database as a result of PCP contamination. The Assessment found that some residual PCP contamination was found in groundwater samples collected near the south boundary of the subject property in 2005 prior to closure of the PCP remediation effort and abandonment of the wells. Based on the SFRWQCB determination that PCP levels had significantly attenuated and would continue to do so, the Assessment concluded that no further investigation at the subject property was warranted at that time.

Phase I Environmental Site Assessment 535-555 Reed Street, Santa Clara, California 95050
, prepared by AEI Consultants (May 31, 2007)

The Assessment found that the site was developed as agricultural land from at least 1939 until the late 1940s. The Pacific Redwood Casket Company occupied the southern portion of the site from the late 1940s until circa 1966. Beaver Lumber Company occupied the site from circa 1970 until the early 2000s as well as other commercial/industrial tenants.

The Assessment identified the following HRECs:

- The presence of PCP contamination resulting from wood-treatment processes conducted at the facility from 1965 to the late 1980s. The Assessment concluded that the PCP contamination was adequately assessed and remediated and received closure from the

SFBRWQB on March 9, 2006 and therefore no further investigation regarding the PCP contamination was required.

- Seven former petroleum USTs were located at the subject property. All of the former USTs were removed from the site by 2001. Some petroleum hydrocarbon contamination was identified following the removal of five USTs in 1992. The contamination resulting from the USTs removed in 1992 was further assessed and defined in 2000 and 2001 and the Santa Clara Valley Water District issued a *Fuel Leak Site Case Closure Report* on February 7, 2002 regarding the former USTs at the site. The Assessment concluded no further investigation regarding the USTs at that time.

Copies of the reports are included in the appendices.

Note: The information obtained from the previous reports was not verified for accuracy by AEI and a critique of the reports is beyond the scope of this assessment.

DRAFT

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	September 1, 2015
AEI Site Assessor(s)	Mr. Scott Van de Mark
Property Escort/Relationship to Property	Ruben Zuniga, Property Manager, DuPont Fabros Technology
Units/Areas Observed	555 Reed Street: AEI inspected 15% of emergency power generator rooms. AEI also inspected the Chiller Rooms in Phase I and Phase II as well as the Cooling Tower area at the west side of the property. 2000-2070 De La Cruz Boulevard: AEI inspected all of the interior units and exterior areas 2100-2160 De La Cruz Boulevard: AEI inspected all of the interior units and exterior areas
Area(s) not accessed and reason(s)	AEI was not provided access to any of the 20 computer/data center suites at the DuPont Fabros Technology Data Center at 535 Reed Street AEI was not provided access to a storage building located at the rear of Microlux at 2050 De La Cruz Boulevard
Weather	85 degrees and sunny

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Waste Water Discharges

Yes	No	Observation
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Wells
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Septic Systems
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Biomedical Wastes
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Other

The subject property is currently occupied by DuPont Fabros Technology at 535 Reed Street and by Praxair Distribution at 2020 De La Cruz Boulevard and Microlux at 2050 De La Cruz Boulevard. On-site operations consist of a computer data center at 535 Reed Street and compressed gas retail sales at 2020 De La Cruz Boulevard. Microlux does not currently have any operations at 2050 De La Cruz Boulevard.

ABOVEGROUND/UNDERGROUND HAZARDOUS SUBSTANCE OR PETROLEUM PRODUCT STORAGE TANKS (ASTs / USTs)

AST(s): DuPont Fabros Technology 535 Reed Street

Size (gallons)/ Contents	Location	Construction/ Secondary Containment	Product Piping (Aboveground/ Underground)

Inhibitor / 200 gallon	Yard		
Sodium Hypochlorite / 270 Gallon	East Chiller Plant	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Aboveground
Sulfuric Acid / 270 Gallon	East Chiller Plant	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Aboveground
90005 – Non-Ox Biocide / 65 gallon	East Chiller Plant	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Aboveground
1338 - Oxidizing Biocide / 65 gallon	East Chiller Plant	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Aboveground
3DT230 - Bromine Inhibitor / 65 gallon	East Chiller Plant	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Aboveground

AEI observed an emergency power generator room in the Phase I section and the Phase II section of the data center. The diesel fuel ASTs, secondary containment structures, generators and spill kits were in excellent condition and housekeeping was also observed to be excellent. AEI inspected the Chiller Rooms in Phase I and Phase II and again all of the ASTs and Chillers and associated piping was observed to be in excellent repair with excellent housekeeping. Therefore, the use and storage of these substances does not represent a significant environmental concern.

UST(s):

Subject	UST#1	UST#2	UST#3	UST#4

Date of Last Integrity Test	6/8/15	6/8/15	6/8/15	6/8/15
Integrity Test Results	Pass	Pass	Pass	Pass
Registration Confirmed	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

The subject property has four 50,000-gallon diesel USTs, two located east of the Phase I section and two located east of the Phase II section of the DuPont Fabros Technology Building. Two of the USTs were installed in 2011 and the other two were installed in March 2015. The USTs are double walled fiberglass, equipped with a leak detection system and are used to fuel on-site emergency generators. The product piping is double-walled and equipped with leak-detection system. The review of reasonably ascertainable information pertinent to the status and operation of the storage tank system included Monitoring System Equipment Certification and Spill Bucket Testing for all four tanks performed in June 2015, did not reveal any reported discharges or gross compliance deficiencies. In the absence of any evidence to suggest the presence or likely presence of a release of petroleum products from the USTs, and based on the age of the USTs, these USTs do not represent a REC. However, the user of this report should be aware that the environmental risk associated with the use of UST systems increases over time, as these systems age. DuPont Fabros Technology has applied to the CSCFD for UST permits for USTs No. 3 and 4 but has not yet received them.

UNIDENTIFIED SUBSTANCE CONTAINERS

One 55-gallon drum of unidentified contents was observed inside Microlux at 2050 De La Cruz Boulevard. AEI inquired with the owner of Microlux, Mr. Edic Sliva by telephone on September 2, 2015, regarding the contents of the 55-gallon drum. Mr. Sliva informed AEI that he could not answer any questions under the advisement of his attorney. The 55-gallon drum was observed to be in excellent condition, stored indoors and there was no evidence of spill in the vicinity of the drum. It is recommended that the contents of the drum be properly labeled and removed if no longer in use.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed	Non-PCB Label
Pad-Mounted	Multiple	DuPont Fabros	2010	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed	Non-PCB Label
		Technology			
Vaulted	Multiple	DuPont Fabros Technology	2010	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Elevators

The subject property building is equipped with a hydraulic elevator. The hydraulic fluid contained within elevator systems can potentially contain toxic PCBs. Based on the age of the building (post-1978), it is unlikely that the hydraulic fluid within the equipment contains PCBs. The equipment for the elevator is located in the center of the building at 535 Reed Street. No evidence of stains or leaks was observed at the base of the equipment during the site inspection. Based on the good condition and regular maintenance of the elevator equipment, the elevator is not expected to represent a significant environmental concern.

DRAINS, SUMPS AND CLARIFIERS

Multiple storm drains were observed in the parking area of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

Two floor drains were observed in a former work room at the Microlux suite at 2050 De La Cruz Boulevard. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for drainage from custodial activities and the fact that the building is connected to the municipal sanitary sewer system, the presence of the drains is not expected to represent a significant environmental concern.

OTHER

Praxair Distribution, Inc. at 2020 De La Cruz Boulevard sells a variety of compressed gas cylinders to local businesses.

AEI observed the following inventory of compressed gas cylinders at Praxair Distribution

Regulated Hazardous Substances/Wastes (size/quantity)	Location

Regulated Hazardous Substances/Wastes (size/quantity)	Location
Acetylene (125-250 cu.ft./47)	Flammable gas cage in storage yard
Argon (125-250 cu.ft./38)	Storage yard
Argon/Carbon Dioxide mix (125-250 cu.ft./25)	Storage yard
Carbon Dioxide (40-250 cu.ft./25)	Storage yard
Helium (40-250 cu.ft./12)	Storage yard
Propane (20 lb./7)	Flammable gas cage
Hydrogen (80-250 cu.ft./7)	Flammable gas cage
Helium/Argon mix (80-250 cu.ft./8)	Storage yard
Nitrogen (80-250 cu.ft./40)	Storage yard
Oxygen (80-250 cu.ft./52)	Storage yard

Based on the proper storage and security of the compressed gas cylinders at Praxair Distribution, they do not represent a significant environmental concern.

AEI also observed two unidentified 55-gallon drums in a storage cage at the rear of Praxair Distribution, Inc. Mr. Danny Youngs, Inside Sales representative for Praxair informed AEI that the two 55-gallon drums contain excavated soils from beneath a former aboveground nitrogen storage tank that was removed in 2000. It is recommended that the drums be labeled appropriately and/or removed.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hazardous Substances and/or Petroleum Products in Connection with Property Use
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Aboveground and Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)

Yes	No	Observation
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Septic Systems
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Other

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Multiple pad-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining or leaks were observed on or around the transformer(s). Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

DRAFT

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that are considered to be “fibrous” and through processing can be separated into smaller and smaller fibers. The fibers are strong, durable, chemical resistant, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos was considered an ideal product and has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products.

At the federal level, asbestos is primarily regulated by the US Environmental Protection Agency (USEPA) primarily through the EPA’s National Emission Standards for Hazardous Air Pollutants (EPA’s NESHAP Standard 40 CFR Chapter 61, Subpart M), the Occupational Health and Safety Administration (OSHA) through the General Industry Standard and the Construction Industry Standard (29 CFR 1926.1101 and 29 CFR 1910.1001). Many states have regulations in place for the inspection, management, and remediation of asbestos including company and individual licensing requirements for all activities relating to asbestos. Under both federal and state regulations building Owners and employers may be required to perform certain activities related to the in-place management of asbestos, and prior to renovations or demolition activities (i.e. asbestos inspections or remediation) that may disturb building materials suspected of containing asbestos.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings at 2000-2070 and 2100-2160 De La Cruz Boulevard, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Although the cutoff date of 1981 referenced in the OSHA regulations is generally accepted for estimating the likelihood that certain building materials may contain asbestos, building materials manufactured after 1981, while not expected to, may still contain asbestos. Typical materials that are known to still be manufactured with asbestos include but are not limited to: asphalt roofing products and building caulking materials and adhesives. A limited list of typical suspect ACMs is included in the following table:

Typical Suspect ACMs

Material Type	Location
Plaster (Acoustical and Smooth)	Walls and Ceilings
Ceiling Tile	Ceiling Systems
Thermal Systems Insulations, Packings, Gaskets	Heating Systems, Cooling Systems, Domestic and Heating and Cooling Piping, Ductwork, Other Equipment
Floor Tile and Associated Mastics, Flooring Felts, Papers (under hardwood/other)	Floors
Vinyl Sheet Flooring and Adhesives	Floors
Cove Base and Associated Mastics	Walls

Material Type	Location
Ceramic Tile Adhesives and Grouts	Walls and Floors and Ceilings
All Adhesives	Mirrors, Wall Coverings, Construction, etc.
Grout and Caulking	Windows and Doors
Gypsum Board, Tape and Joint Compound	Wall and Ceiling Systems
Insulation Materials	Walls, Ceilings, Attic Spaces
Roofing Materials (Felts, Rolled, Shingle, Flashings, Adhesives, Tar, Insulations)	Roof and Parapet Wall Systems
Brick and Block, Mortars	Walls

According to the subject property owner demolition of the subject property building(s) at 2000-2070 and 2100-2160 De La Cruz Boulevard is planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.

8.2 LEAD-BASED PAINT

LBP is defined as any paint, varnish, stain, or other applied coating that has $\geq 1 \text{ mg/cm}^2$ (5,000 $\mu\text{g/g}$ or 5,000 ppm) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2 . Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, federally owned or subsidized housing is affected by this rule.

LCP is defined as any paint with any detectable amount of lead present in it. It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to LCP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property buildings at 2000-2070 and 2100-2160 De La Cruz Boulevard, there is a potential that LBP is present. AEI understands that demolition activities of the subject property buildings are planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 RADON

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2.0 pCi/L and 4.0 pCi/L, equal to or below the action level of 4.0 pCi/L set forth by the US EPA.

8.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The Santa Clara Valley Water District supplies potable water to the subject property. The most recent water quality report (July 2015) states that 90th percentile lead levels in the areas water supply were non-detect and therefore are well within standards established by the USEPA.

8.5 MOLD/INDOOR AIR QUALITY ISSUES

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property in order to identify the presence/absence of visible mold (fungal) growth. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, bulk sampling of suspect surfaces was not conducted as part of this assessment and additional action with respect to mold does not appear to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the subject property.

DRAFT

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
UNISYS	1040 DIGIULIO AVE	W 1/4 - 1/2 (0.336 mi.)	AQ207	475

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 8 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3

EXECUTIVE SUMMARY

CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 33 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 05/04/2015 has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information

EXECUTIVE SUMMARY

that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 33 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, and dated 05/18/2015 has revealed that there are 2 CA SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 3 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HWP: Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

A review of the CA HWP list, as provided by EDR, and dated 05/26/2015 has revealed that there are 3 CA HWP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CA HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the CA HWT list, as provided by EDR, and dated 07/13/2015 has revealed that there is 1 CA HWT site within approximately 0.25 miles of the target property.

ECS REFINING Reg Num: 6092	705 REED ST	SW 0 - 1/8 (0.071 mi.)	D40	143

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, has revealed that there is 1 NY MANIFEST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

CA Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the CA Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 CA Notify 65 site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

PG AND E GAS PLANT S	COR BENTON AND RAILR	SSE 1/2 - 1 (0.520 mi.)	268	660

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 42 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 2 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Other Metal

Site History:

From 1960 to 1981, the site was owned by Gillmore Supply Company who leased the property to Metal Coating Company/Galvanizers, Inc., who operated a galvanizing facility. Operations included the use of zinc-rich plating solutions and other acidic process solutions. Releases likely occurred through accidental spills of process solutions, leaks from process tanks and piping, onsite disposal of spent solutions, and onsite discharges of wastewater. Lombardo Diamond Core Drilling Company, Inc. (Lombardo) purchased the property in 1985. Lombardo currently uses the property for parking and storage of vehicles, heavy equipment and supplies used in its concrete cutting business. Starting in 1983, several investigations have been performed which have completely defined the extent of soil and groundwater contamination. Contamination has not migrated off site. Elevated levels of metals, primarily zinc, were found in the shallow soils near the former galvanizing building. Zinc had the highest concentrations. Volatile organic compounds were not identified. Elevated lead concentrations were found only in the top five feet of soil, while zinc concentrations were found deeper. Zinc concentrations were highest where the soils were more acidic (low pH values). Most of the zinc impact was 10-25 feet bgs, and was confined to the vicinity near the former galvanizing building. Shallow groundwater was also contaminated with zinc. The maximum concentrations of zinc in 1990 were 34,000 milligrams per kilogram (mg/kg) in the soil and 10,000 milligrams per liter (mg/l) in groundwater. The most recent maximum groundwater concentration in November 2005 was 2,600 mg/l. For comparison, the maximum contaminant level considered safe for drinking water is 5 mg/l.

 Completed Document Type: Site Screening
 Completed Date: 04/08/1993
 Comments: The Lombardo site is approximately 2 acres in size and used for parking and storage of vehicles, heavy equipment and supplies by the company in its concrete cutting business. Lombardo has owned this property since April 1985. Historical information indicates that from the 1960's to the 1970's, metal coating company, a galvanizing facility operated onsite. Available information likewise indicates that metal coating may have discharged waste pickling and washing

solution on-site, resulting to soil and ground- water contamination prior to Lombarbo's purchase of the property in 1985. Sampling results in 1991 showed zinc in soil as high as 34,000 ppm; and 364 ppm in groundwater. The San Francisco Regional Water Quality Control Board (SF RWQCB) is currently providing direct oversight in remedial activities at the site. Site cleanup requirements (order 92-052) was issued on May 20, 1992 to Lombardo and outlines specific tasks needed to be complied with.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/22/2010
Comments: Field work to implement the Supplemental Site Investigation Work Plan was completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 05/10/2012
Comments: 30-day public comment period ended on April 30, 2012. No comments received. DTSC approved the Removal Action Workplan without modifications.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/01/2013
Comments: The Report documents the removal action, which consisted of excavating soil contaminated with arsenic and total petroleum hydrocarbons in the first two feet of soil, backfilling with clean imported fill, and confirmation soil sampling. Since residual soil contamination above levels that allow for unrestricted land use remains deeper than two feet below the ground surface, the remedy includes a Land Use Covenant restricting sensitive land uses on the site and requiring a soil management plan if soil deeper than two feet is disturbed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: *Correspondence - Received
Completed Date: 10/07/2010
Comments: The extension is being requested because delays in completing the building demolition and debris disposal continue to prevent access to soil sampling locations. Extension request was granted. New due date for the Supplemental Site Investigation Report is December 1, 2010.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 235

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 10

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 5500.2

Waste code: D007

Waste name: CHROMIUM

Amount (Lbs): 5500.2

Waste code: F006

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

PROVENZANO BROS INC. (Continued)

U001601802

Case Worker: REG
Local Agency: Not reported
RB Case Number: 43S1120
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: Historically, the property has been used for trucking, parking and automotive-related business since the 1950's. The prior owner, Provenzano Brothers, went bankrupt recently. One underground storage tank for gasoline was installed in 1985 and removed in 1992. Soil samples collected after tank removal did not indicate any leakage. 2007 due diligence site investigation, however, found PCE (up to 440 ppb) and TCE (up to 180 ppb) in groundwater. Since no on-site source could be identified (only one sample showed elevated lead concentration at 1,200 mg/kg), the applicant suspects the source of VOCs is from off-site. But, since groundwater gradient has not been established for the Site, this issue would have to be addressed later.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Aquifer used for drinking water supply, Soil
 Potential Contaminants of Concern: Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
 Site History: The site resides in a commercial area of Santa Clara and consists of the westernmost unit of a 20,000 square foot (SF), multi-tenant commercial & industrial building with individual addresses ranging from 440 through 448 Robert Avenue. According to a report by Shaw Environmental dated 2005, a 2,000 gallon Underground Storage Tank (UST) was installed outside the southwest corner of the site building after the building was constructed in 1960. The UST was used from approximately 1971 to 1973. The tank was not used from 1973 until its removal in 1990. Records indicate that approximately 125 cubic yards (CY) of soil were excavated concurrent with the tank removal. Following the UST removal, groundwater monitoring wells were installed on the site and its vicinity in 1992, 1995, and 2000. In addition, a site investigation occurred in 2005 consisting of Hydropunch, Geoprobe, Cone Penetration Testing Procedure (CPT), and Pore Pressure Dissipation Tests. The site is located in the Santa Clara Valley, at the southern end of the San Francisco Bay. The San Francisco Bay resides in a broad depression between the San Andreas and Hayward fault systems. This area lies within the Coast Range Physiographic Province, characterized by northwest-southeast trending valleys and ridges, between the Pacific Ocean to the west and the Great Valley to the east. The oldest known bedrock in the Coast Range Province is marine sedimentary and volcanic rocks from the Franciscan Assemblage. Geologic formations in the San Francisco Bay Region range in age from Jurassic to recent Holocene. The site lithology is relatively homogeneous in the upper 30 feet, primarily consisting of cohesive, silty clay soils with minor interbedded silty sands. From approximately 30 feet below grade (fbg) to the maximum depth explored of 44 fbg, coarser grained materials are present. No logs of wells MW-1 through MW-6 or VEW-1 were available to describe subsurface sediments. Boring B-5 was the only available log, and describes sandy clay in the upper 7.5 feet. The site is located in the Santa Clara Sub-basin of the Santa Clara Groundwater Basin, designated with Basin

JENIC (Continued)

S101309463

ID 2-9.02 (DWR 2003). The Santa Clara Groundwater Basin is a northwest trending alluvial basin, bounded on the northeast by the Diablo Range and on the southwest by the Santa Cruz Mountains. The Santa Clara Sub-basin aquifer system consists of unconsolidated sediments of Quaternary age. The Santa Clara Valley Water District Groundwater Management Plan, July 2001, cites that basin lithology beneath the subject site consists of a series of low permeability clay and silt layers, resulting in confined conditions at depth beneath the site. Shallow groundwater occurs within these low permeability clays and silts. In the area average annual rainfall is approximately 24 inches and is received primarily between November and March. Throughout most of the Santa Clara Valley Sub-basin, regional water level contours show that the direction of groundwater flow is generally northwesterly, towards San Francisco Bay, with some localized variation. Groundwater flow direction typically correlates to topography. Recent groundwater level measurements from December 2008 indicate a northeasterly flow direction beneath the site. The first water-bearing zone beneath the site was encountered between 5 and 7 fbg during the investigation conducted in 2005. 1960 through 1973 UST Installation and Usage: A 2,000-gallon UST was installed outside the southwest corner of the site building sometime after the building was constructed in 1960. Previous reports indicate that the UST was used from approximately 1971 until 1973 to dispense motor fuels to delivery vans. The previous reports also stated that the tank remained unused from 1973 until its removal in 1990. 1990 - UST Removal and Excavation of Impacted Soil: The 2,000-gallon UST was removed in 1990. Approximately 125 CY of gasoline impacted soil was excavated during the removal. No information regarding conditions encountered during the tank removal, confirmed excavation limits, or compliance sampling results have been located. 1991, 1995 and 2000 - Monitoring Well Installation: Groundwater monitoring wells were installed at the site on four different occasions. It was reported that wells were installed during two field operations in 1991, and also in 1995 and 2000. Groundwater monitoring and analytical data indicate that wells MW-1 and MW-2 were installed in 1991, although report texts have stated this occurred in 1992. Wells MW-3-J and MW-4 were installed in 1995 and wells MW-5, MW-6 and VEW-1 were installed in 2000. Periodic groundwater monitoring and sampling began in August 1991 with wells MW-1 and MW-2, then occurred again after the installation of wells MW-3-J and MW-4. Since October 1998, sampling frequency has fluctuated between quarterly and semi-annually. 2005 In-situ Chemical Oxidation Remediation: In-situ chemical oxidation (ISCO) remediation was conducted for several years through mid-2005, via the monthly introduction of hydrogen peroxide solutions into several site monitoring wells. The remedial approach was discontinued with agency concurrence because it appeared to be only partially effective. 2005 - Environmental Document Review and Site Investigation: Shaw Environmental, Inc. (Shaw) reviewed historical environmental documents for the site and inferred that the Site Conceptual Model (SCM) may have been flawed (Shaw, 2005). To date, no records of an SCM report have been located. Shaw conducted a Cone Penetrometer Testing (CPT) investigation in November 2005 to further characterize conditions beneath the site. Data suggest that the water table may have been much lower during the 1970s, when a fuel release appears to have occurred, and that a significant mass of immobile hydrocarbons might be present at depths down to 25 fbg. This is evidenced by soil sample analysis from boring B-5 showing up to 2,000

milligrams per kilogram (mg/kg) total petroleum hydrocarbons as gasoline (TPHg) at 25 fbg. Although well completion records are not available, groundwater monitoring data sheets indicate that deepest site well is MW-1 with a total depth of 20.8 fbg. Therefore, it is surmised that this residual mass lies beneath the depth of many, if not all, site wells and, therefore, below any effective depth of treatment using those wells.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 149048

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 1135788

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 35658

Waste code: D004

Waste name: ARSENIC

Amount (Lbs): 104250

Waste code: D007

Waste name: CHROMIUM

Amount (Lbs): 142008

Waste code: D008

Waste name: LEAD

Amount (Lbs): 415759

Waste code: F006

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Amount (Lbs): 397800

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Amount (Lbs): 396

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Amount (Lbs): 14420.1

- Waste code: D007
- Waste name: CHROMIUM
- Amount (Lbs): 51239.4

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The report of this work was not found in the file. The information presented here is from summaries contained in later reports. Maximum concentrations of 6,100 parts per billion by volume (ppbv) total purgeable petroleum hydrocarbons calculated as Gasoline (TPPH-g), 77 ppbv benzene, and 1,400 ppbv methyl tertiary butyl ether (MtBE) were detected. Locations of samples are not known. 1998 In December, 1 Geoprobe boring (EB1) was advanced onsite to 17 feet below the ground surface (ft bgs). 3 soil samples were collected and reported to contain maximum concentrations of 505 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.0667 ppm benzene, 6.26 ppm Ethylbenzene, 2.56 ppm Xylenes, and 3.44 ppm MtBE. A grab groundwater sample was collected and reported to contain 17,000 parts per billion (ppb) TPHg, 74 ppb benzene, 197 ppb Toluene, 56.1 ppb Ethylbenzene, 2,130 ppb Xylenes, and 3,830 ppb MtBE. Product dispensers and piping were replaced. 4 soil samples (D1 through D4) were collected from beneath the dispensers between 2-2.5 ft bgs and 3 soil samples (P1 through P3) were collected along the piping at 2.5-3 ft bgs. The maximum concentrations reported for the piping samples was 12.2 ppm TPHg, 0.199 ppm Benzene, 0.045 ppm Toluene, 0.784 ppm Ethylbenzene, 0.194 ppm Xylenes, 2.75 ppm MtBE, and 18.7 ppm Total Lead. The maximum concentrations for the dispenser samples were 339 ppm TPHg, 1.99 ppm Benzene, 1.81 ppm Toluene, 5.16 ppm Ethylbenzene, 13.8 ppm Xylenes, 84.6 ppm MtBE, and 20 ppm Total Lead. Additional excavation was conducted in the area of sample D1 to a depth of 6 ft bgs. Sample D1B was collected at 6 ft bgs and reported to contain 16.1 ppm TPHg, 0.013 ppm Benzene, 0.011 ppm Toluene, 0.17 ppm

Ethylbenzene, 0.041 ppm Xylenes, and 1.89 ppm MtBE. 1999 In June, 3 groundwater monitoring wells (MW-1 through MW-3) were advanced to 15 ft bgs. 7 soil samples were collected and reported to have maximum concentrations of 1,300 ppm TPHg, 0.063 ppm Benzene, 2.5 ppm Toluene, 29 ppm Ethylbenzene, 130 ppm Xylenes, and 0.12 ppm MtBE. Periodic groundwater sampling began at the site. 2000 In March, a batch extraction test was conducted on a tank complex vadose monitoring well TB1. Reportedly, there are 3 tank complex vadose monitoring wells installed within the tank pit (TB1 through TB3). Approximately 50 gallons of groundwater were removed and the well was dewatered. Drawdown was not recorded in nearby wells. Another test was conducted on well MW1, which dewatered immediately and did not produce a significant volume of water. In August, 4 groundwater monitoring wells (MW-4 through MW-7) were installed on and offsite to approximately 15 ft bgs. Soil samples were not collected and submitted for laboratory analysis during this investigation. The new wells were incorporated into the monitoring program. 2001 In September, 5 Geoprobe borings (B1 through B5) were advanced onsite to 30 ft bgs as part of a transect study. 24 soil samples were collected and reported to have non-detectable to low concentrations of the Constituents of Concern (COCs). 15 depth discrete grab groundwater samples were collected. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) were not reported to be present in any of the samples above the laboratory reporting limits. The maximum concentration of 45,000 ppb MtBE was reported for the sample collected from 11 ft bgs in boring B4. Deeper samples collected from this boring decreased to 3,500 ppb MtBE. 2002 In January and February, 8 Geoprobe borings (B6 through B13) were advanced offsite to depths ranging from 31 to 42 fbg as part of a transect study. 23 soil samples were collected and reported to have non-detectable to very low concentrations of COCs. 21 depth discrete grab groundwater samples were collected and reported to have maximum concentrations of 230 ppb TPHg, 1 ppb Benzene, 0.99 ppb Toluene, 1.2 ppb Ethylbenzene, 8.7 ppb Xylenes, and 840 ppb MtBE. The transect study concluded that dissolved TPPH-g (sic) and benzene impact downgradient of the site do not appear to warrant further investigation or remediation. And that the detected concentration of 840 ppb MtBE in the location of boring B-8, approximately 250 to the north of the site, is generally consistent with historical analytical data for existing monitoring well MW-7. And that the Dissolved MtBE impact approximately 500 feet north-northwest of the site attenuates to a concentration of 23 ppb, as quantified by analytical data for boring B-10, sampled during this investigation. In April, 3 shallow extraction wells (EW1, EW3 and EW4) to 25 ft bgs and 1 deeper extraction well (EW2) to 35 ft bgs were installed onsite. 10 soil samples were collected and reported to have non-detectable to low concentrations of COCs. The new wells were incorporated into the monitoring program. Wells EW2 and EW3 were installed adjacent to each other and based on the gauging data, there is an upward vertical hydraulic gradient from the deeper water-bearing zone toward the shallow water-bearing zone. In October, groundwater extraction from EW-1 and EW-3 commenced and continued through September 2004. Groundwater was extracted and stored in an onsite holding tank and hauled offsite. As of June 24, 2004, approximately 425,650 gallons of groundwater had been extracted, and approximately 4.0 pounds of TPH-g and 4.5 pounds of MTBE had been removed. 2003 In July, 2 groundwater monitoring wells (MW8 and MW9) were installed offsite to 17 ft bgs. 6 soil samples were collected

and were not reported to have concentrations of the COCs above the laboratory reporting limits. The new wells were incorporated into the monitoring program. An underground conduit survey was conducted and concluded that a 78-inch storm drain beneath De La Cruz Boulevard and the telecommunication conduit beneath Martin Avenue were in contact with groundwater. Based on proximity, size, and local groundwater flow direction, the conduit likely to have the greatest influence for acting as a preferential pathway for the migration of hydrocarbon-impacted groundwater is the 78-inch storm drain that underlies De La Cruz Boulevard. Shaw also notes that the 33-inch storm drain and 24-inch sanitary sewer lines underlying De La Cruz Boulevard and the 12-inch sanitary sewer line and the 33-inch storm drain underlying Martin Avenue, may have been in contact with groundwater previously, based on historical depth to groundwater data. 2004 In August, 10 ozone sparge wells (C1 through C10) were installed between 18 and 22 ft bgs onsite. The ozone sparge system began operations in October and ran through May 2008. 2007 In September, 2 hydraulic hoists and 1 clarifier were removed from the site. 1 soil sample was collected from each hoist between 9.7 and 9.9 ft bgs and were reported to have maximum concentrations of 6.1 ppm TPH as Diesel (TPHd), and 53 ppm Hydraulic Oil. 3 soil samples were collected in association with the clarifier and piping; the depths of these samples were not reported. Maximum concentrations of 360 ppm TPHd, 2,300 ppm Hydraulic Oil and 110 ppm Total Oil and Grease (TOG) were reported for sample PIPE-2. Soil was excavated in the area of this sample to remove impacted soil and sample PIPE-3 was collected from 10 ft bgs. PIPE-3 was reported to contain 8.68 ppm TOG, 33 ppm Chromium, 18 ppm Nickel, 50 ppm Lead, and 53 ppm Zinc. Approximately 47.7 tons of soil was removed from the site.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:
In January 1985, Mr. Russell Thornhill with Valley Rockery Inc. contacted the Santa Clara Fire Department regarding removal/decommissioning of the empty and unused 1,000-gallon gasoline UST located partially under the current building. A letter dated January 31, 1985 from the City of Santa Clara Fire Department signed by Richard Peterson, Deputy Fire Marshal and Bill Gianatasio, Fire Marshal, stated that waiver of U.F.C. Section 79.113(e) (Tank Removal) will be granted, provided compliance with Local Ordinance #1490 is met. The letter also indicated that Valley Rockery had thirty days to submit a letter of intent and 90 days to complete the required work. In a letter dated February 11, 1985, Mr. Thornhill indicated that Valley Rockery would obtain the required soil samples. On April 26, 1985, one exploratory boring was advanced to a depth of 21.5 feet below ground surface (bgs) immediately north of the UST. One soil sample was collected from a depth of 15 feet bgs and submitted for analysis. The sample was analyzed for benzene, toluene, ethylbenzene and total xylenes (BTEX), and the other sample was analyzed for total hydrocarbons and reported concentrations of BTEX at 0.0312 milligrams per kilogram (mg/kg), 0.5992 mg/kg, 2.213 mg/kg, and 1.081 mg/kg, respectively. Groundwater was not encountered during the investigation. AEI performed a subsurface investigation at the subject property on August 25, 2006. Four (4) soil borings (SB-1, SB-2, SB-3, and SB-4) were advanced in the area of the UST, which was located under a landscaped area between the driveway and the building. Soil boring SB-1 encountered the north end of the UST at a depth of five (5) feet bgs. The locations of these soil borings are shown on Figure 2, Site Plan and Figure 3, Detailed Site Plan. The results of TPH-g analyses on soil samples collected from borings SB-2 through SB-4 ranged from 34 mg/kg (SB3-10) to 8,500 mg/kg (SB2-8.5). The results of TPH-d analyses ranged from 2.0 mg/kg (SB3-10) to 1,800 mg/kg (SB2-8.5). The results of TPH-mo analyses ranged from ND<5.0 mg/kg (SB3-10 and SB4-8) to ND<250 mg/kg (SB2-8.5). Analysis by Method 8021B found no detectable concentrations of methyl tertiary butyl ether (MTBE) at reporting limits of 0.50 mg/kg (SB3-10 and SB4-8) and elevated reporting limit of 50 mg/kg in boring SB2-8.5. Grab groundwater samples were collected from the borings and reported to have maximum concentrations of 240,000 ppb TPHg, 140,000 ppb TPHd,

22,000 ppb Benzene, 25,000 ppb Toluene, 5,000 ppb Ethylbenzene, 23,000 ppb xylenes, and 1,000 ppb MtBE (EPA Method No. 8021B). 12/06 additional 9 soil borings (SB5-SB13) were advanced onsite. TPH-g was reported at concentrations ranging from 23 mg/kg (SB-5-10) to 190 mg/kg (SB-7- 9.5). TPH-d was reported at concentrations ranging from 5.5 mg/kg (SB-5-10) to 57 mg/kg (SB-7-9.5). Analysis by Method 8021B found no detectable concentrations of MTBE at or above reporting limits ranging from 0.50 mg/kg (SB3-10 and SB4-8) to 50 mg/kg (SB2-8.5). The maximum concentrations of BTEX reported were 0.42 mg/kg (SB-10-10), 0.69 mg/kg (SB-7-9.5), 0.079 mg/kg (SB-10-10), and 0.12 mg/kg (SB-10-10), respectively. Light non-aqueous phase liquid (LNAPL) was seen in the groundwater grab samples from borings SB-7 and SB-10. LNAPL sheen was seen on the sampler in soil boring SB-5 at a depth of 12 feet bgs. 8/07 - 4 monitoring wells were installed and groundwater monitoring began.

SJIA- WESTSIDE PARKING LOT (Continued)

S112346707

Site History: These 2 parcels are located on the west-side of the SJ International Airport. The site is also known by the Airport address of 1701 Airport Blvd.. The current use is parking lot and staging area for construction materials for the airport; and historically this area was agricultural farmland. There are plans to put in multiple hangars, parking lots and runway access taxiways.

Registry ID: 110001185217

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Registry ID: 110002798465

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:

Facility ID: San Francisco Bay 43I009931
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 4087275218

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Facility ID: San Francisco Bay 43I006910
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 4087274155
Facility Contact: DYANNE CASTRO
Agency Name: MONTOYA JARAMILLO INC
Agency Address: 1161 Richard Ave

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern: Trichloroethylene (TCE), Freon, Polychlorinated biphenyls (PCBs), Waste Oil / Motor / Hydraulic / Lubricating

Actual:
61 ft.

Site History: The Site was used for agricultural purposes prior to its industrial development in the early 1950's by predecessors of Federal Pacific Electric (FPE). The Site was used by FPE and its predecessors to manufacture electrical components (e.g., air switches, circuit breakers and components, and transformers). FMC purchased the Site in 1964 and began operations associated with manufacturing of artillery shells and then assembly and painting of military tracked vehicles. FPE retained a portion of the Site and continued transformer manufacturing until 1968, when FMC purchased the remainder of the Site. Soil and groundwater characterization was initiated in May 1989, and revealed concentrations of trichloroethene (TCE) in groundwater above its State of California Environmental Protection Agency (CalEPA) maximum contaminant level (MCL) of 5 micrograms per liter (ug/L) in the A-level aquifer. On February 20, 1991, the State

of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) adopted Site Cleanup Requirement Order No. 91-020 (RWQCB, 1991). The RWQCB adopted Order No. 92-132 (RWQCB, 1992) on October 21, 1992, which amended Order No. 91-020. On February 17, 1993, the RWQCB adopted Order No. 93-018 (RWQCB, 1993), amending Orders No. 91-020 and 92-132. On March 16, 1994, the RWQCB adopted Order No. 94-043 (RWQCB, 1994), amending Orders No. 91-020, 92-132, and 93-018. Demolition activities occurred at the Site in 1995 and 1996 as part of redevelopment activities. Plant 31 (the Armor Building) and Plant 22 are no longer present. Approximately 13 acres of the property were sold to Costco Wholesale Corporation (Costco), and a warehouse with associated parking lots and gasoline fueling station were constructed on that parcel in 1995 (currently 1601 Coleman Avenue). Additionally, approximately 12-acres (former Plant 22) were sold to Swenson Development, LP in August 1996, and a warehouse and associated parking lots (currently 335 West Brokaw Road) were constructed in 1996-1997. Swenson Development, LP sold this portion of the property to K.J.L. Associates in 1997. The remaining 3.8-acres of the Site were sold to Hunter/Storm/Coleman, LLC in November 1996 (currently 1331 through 1351 and 1451 Coleman Avenue). Construction of various retail services and associated parking lots occurred in this area during 1997. The portion of the site currently occupied by Costco has been impacted with petroleum constituents, including methyl tertiary-butyl ether (MTBE), caused by a leaking fuel tank operated by Costco. In a letter dated September 18, 2001 (FMC, 2001), FMC requested a revision to the Self-Monitoring Program (SMP) for the Site. The RWQCB conditionally accepted the modification in a letter dated November 6, 2001 (RWQCB, 2001). Monitoring well W- 42A was added to the sampling schedule by the RWQCB. In July 2002, FMC requested Site curtailment and rescission of Site Cleanup Requirements Orders No. 91-020, 92-132, 93-018, and 94-043 based on long-term groundwater monitoring data confirming constituents of concern are well below healthbased target levels (HBTs). FMC also requested abandonment of ten groundwater monitoring wells located on or adjacent to the Site. FMC proposed to retain five extraction wells, five monitoring wells, and three piezometers for use as part of FMCs remedial measures under RWQCB Order No. 96-024 at the adjacent 328 West Brokaw Road facility. During October 2003, FMC requested an additional reduction in monitoring frequency, and proposed to abandon eight groundwater wells as the collection of chemical and groundwater elevation data from these wells was no longer necessary. The RWQCB approved the modification to the SMP and FMCs proposal to abandon the wells in their October 30, 2003 letter (RWQCB, 2003), with one revision: retaining monitoring well W- 31A and abandoning W-27A instead. FMC chose to retain W-27A for future monitoring purposes.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Site history as of July 2012: Two releases at this site - one from a gasoline UST and another from a diesel UST. The Site is located on the north side of Memorex Drive in Santa Clara, CA, and is currently operated as a steel treating facility. A gasoline underground storage tank (UST) was removed from the Site in 1986, and in May 2011 an abandoned diesel UST was discovered and removed. The diesel UST may have been owned by Kraft Foods and used to fuel delivery trucks. The abandoned diesel UST, and likely co-contributor, was discovered adjacent to MW-2 at 1185 Memorex Drive (which is part of this same property) and removed in May 2011 with ORC added to the excavation prior to backfilling. Treatment of the UST excavation with ORC appears to have significantly decreased contaminant concentrations in monitor well MW-2, located adjacent to the former excavation. Ground water monitor wells were installed in 1999 and 2002 and have been sampled semi-annually since 2002. Quarterly monitoring has occurred

since August 2011 in order to evaluate the effectiveness of the May 2011 UST removal and remediation. Based on the results of ground water monitoring performed at 1225 Memorex Drive ground water gradient direction is to the north at an average of 0.0071 feet per foot which is consistent with historical trends and regional topography.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

WDS:

Facility ID: San Francisco Bay 43I014274
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Site History: The AT&T facility is located in a mixed commercial and industrial area in Santa Clara, California. A two-story building that houses offices and telephone switching equipment occupies the central portion of the site. North of the building, adjacent to the walkway leading to the main entrance was a former 1,000-gallon underground storage tank (UST) and three aboveground storage tanks (ASTs) that contained diesel fuel for a standby generator. AT&T is in the process of vacating the facility and no longer requires a standby generator

at this facility. 2010 Tank Removal Activities November: Prior to the start of tank removal activities, AT&T arranged for the removal of the bulk of diesel fuel within the tank systems to be removed by AT&T's fuel supply vendor. Philips West Industrial Services transported 1,500 gallon of diesel fuel to Evergreen Oil recycling facility in Newark, California. Paradiso Mechanical, Inc. (Paradiso) began excavation activities of the fill material surrounding the UST and around the associated piping. The removed fill material was placed on polyethylene sheeting and stockpiled adjacent to the UST excavation pending removal. The interiors of the UST, ASTs, and day tanks were triple-rinsed by PSC Environmental Services (PSC) personnel using a fresh water/detergent mixture and a hot water pressure washer in order to remove any residual diesel fuel. The rinsate was removed from the tanks by a PSC vacuum truck, with the interior of the tanks then inspected to ensure all sludge and liquids had been removed. Following completion of rinsing activities, the rinsate and fuel was transported for disposal under manifest number 007751519 JJK to Evergreen Oil, Inc., in Newark, California. Paradiso personnel added approximately 75 lbs. of dry ice to the UST interior to inert its atmosphere. After approximately 1 hour, the lower explosion limit (LEL) and percent oxygen were measured at below 10%, with Ms. Giang Tran with the SCFD granting permission to remove the UST. After removal, both the UST and AST were inspected for signs of deterioration, holes, or leakage with none noted. However, discolored soils and a petroleum hydrocarbon odor were noted in the sidewalls of the UST excavation. Approximately 3 inches of water with a slight sheen was also present in the excavation. At the base of the tank excavation was a concrete slab, at a depth of 10 feet below surface grade (bsg). Under the direction of Ms. Giang Tran with the SCFD, Shaw personnel collected one soil sample, labeled TP-1, from along the sidewall of the excavation at the soil-water interface. Due to the small volume present, a water sample was not collected. The soil sample was collected by pushing a brass sample tube into soils collected by the bucket of the backhoe. An additional soil sample, labeled PL-1, was also collected from the former pipeline trench at a depth of 4 feet below surface grade (bsg), two feet below the base of the trench. In order to evaluate fill material reuse and disposal options, Shaw personnel collected one four-point composite sample, labeled CS 1-4, by pushing brass sample tubes into the stockpile soil. The soil samples were submitted to McCampbell Analytical, Inc. (McCampbell) in Pittsburg, California for analysis for total petroleum hydrocarbons as diesel (TPH-D) via EPA Method 8015, and for benzene, toluene, ethylbenzene, and xylenes (BTEX) constituents via EPA Method 8260B. The samples were further analyzed for the fuel oxygenates tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert butyl ether (MTBE) via EPA Method 8260B. Results of the analysis reported TPH-D in the tank excavation sample TP-1 and pipeline sample PL-1 at concentrations of 2,200 milligrams per kilogram (mg/kg) and 3.3 mg/kg, respectively. TPH-D was also reported in the composite stockpile sample CS 1-4 at a concentration of 86 mg/kg. No other analytes were detected in any of the samples. Soil sample analytical results are presented in Attachment 3. No BTEX constituents or fuel oxygenates were reported in the analysis of any of the samples. Soil discoloration and a petroleum hydrocarbon odor were noted in the excavation sidewall. Approximately 3 inches of water with a slight sheen was also noted in the excavation. On November 23, 2010, the two

tanks (1,000-gallon UST and the 2,000-gallon AST) were transported by PSC to Ecology Control Industries (ECI) facility in Richmond, California, for disposal under hazardous waste manifest 002135778 JJK. The removed piping and the 25-gallon and 50-gallon day tanks that had been placed into the 20-cubic yard bin was transported by PSC to ECI's facility for disposal under hazardous waste manifest 000011727 DAT. Following completion of tank removal and sampling activities, the excavation was temporarily backfilled with stockpiled fill material to prevent collapse of the sidewalls and potentially undermining the adjacent AT&T building. Due to the presence of impacted soils reported within the UST excavation, Shaw and AT&T planned to remove the backfilled material, over-excavate accessible hydrocarbon-impacted soils, and transport removed fill and soils to an appropriate offsite disposal facility. 2011 Soil Over-Excavation and Dewatering Activities In February, 2011, Paradiso Mechanical, Inc. (Paradiso) installed sheet-pile shoring around the former excavation in order to ensure the integrity of the adjacent building was not compromised during over-excavation activities. Paradiso then removed the fill material down to approximately 13 feet bsg, which was the original depth of the former USTs excavation. Following removal of the fill material, Paradiso widened the excavation to the extent of the sheet-pile shoring (15 feet by 20 feet), and deepened the excavation to 15 feet bsg, with ground water encountered at a depth of approximately 13 feet bsg. Approximately 165 cubic yards (213 tons) were excavated and transported for disposal by Intrinsic Transportation, Inc., (Intrinsic) to Ox Mountain Landfill in Half Moon Bay, California. The excavation was dewatered by PSC Environmental Services (PSC) using a vacuum truck. Prior to purging, a moderate sheen was noted on the groundwater. A total of 5,000 gallons of groundwater were removed from the excavation and transported off-site for disposal. In March 2011, Shaw collected a sample, labeled GW-1, of the ground water within the excavation. The sample was analyzed for TPH-D, benzene, toluene, ethylbenzene, and xylenes (BTEX), and five fuels oxygenates tert-amyl methyl ether (TAME), t-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert-butyl ether (MTBE). Results of the sample analysis reported TPH-D and MTBE at concentrations of 18,000 micrograms per liter (ug/L) and 0.70 ug/L, respectively. No BTEX constituents or fuel oxygenates were reported in the analysis. The excavation was dewatered again by PSC, with an additional 4,500 gallons of groundwater removed. Before purging began, a slight sheen was noted on the groundwater. On March 8, 2011, after allowing the excavation to recharge overnight, Shaw collected two confirmation groundwater samples, labeled GW-2 and GW-2-F, from the excavation using disposable bailers as before. The samples were analyzed for TPH-D only under EPA Method 8015B, and sample GW-2-F was filtered and then analyzed for TPH-D to determine if sediment within the groundwater was impacting sample results. Results of the analysis reported TPH-D in both samples GW-2 and GW-2-F at a concentration of 150 ug/L. The fuel oxygenate MTBE was also reported in sample GW-2-F at 0.57 ug/L. 2013 In March 2013, a fifth round of groundwater sampling was conducted. Water level elevations ranged from 43.61 feet above msl in well MW-2 to 40.79 feet above msl in well MW-3. The direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported TPH-D in all five wells ranging from 230 ug/L in MW-4 and MW-5, to 580 ug/L in MW-1. Concentrations of all other constituents

(TPH-G, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Based upon previous groundwater sampling results, Shaw and AT&T believed the TPH-D results to be anomalous and not reflective of groundwater conditions. As a result, Shaw mobilized to the site on May 2, 2013 to resample all five monitoring wells for TPH-D. Laboratory analytical results for the May 2, 2013 sampling reported TPH-D below laboratory detection limits in MW-2, MW-3, MW-4, and MW-5. TPH-D was reported in MW-1 at a concentration of 43 ug/L. In June 2013, a sixth round of groundwater sampling was conducted. Water level elevations in wells ranged from 40.60 feet above msl in well MW-1 to 43.64 feet above msl in well MW-2. The direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported concentrations of all constituents (TPH-G, TPH-D, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Additional Site Assessment In September 2013, four direct-push borings were advanced by National Exploration of Woodland, California, a C- 57 licensed driller. Each boring was initiated by hand-digging the first few feet of each location to clearly unmarked utilities. The boring were then cored continuously using a 48-inch-long core direct-push sampler lined with clear, Lexan sample tubes. The soil cores were used for lithologic evaluation and field screening of organic vapors. Headspace screening for organic vapors was accomplished using a photo ionization detector (PID). Two samples were collected from each boring, with one sample from the 0- to 5-foot depth interval and another sample from the 5- to 10-foot depth interval. Sample locations were determined by visual observation and PID readings. If groundwater was encountered, a sample from the capillary fringe was collected. The soil samples were submitted to Pace Analytical in Minneapolis, Minnesota, an ELAP certified laboratory for analysis for TPH-D under EPA Method 8015 (modified), and for BTEX constituents and naphthalene by EPA Method 82608. Laboratory analytical data reported TPH-D, BTEX, and naphthalene concentrations were below laboratory detection limits in all samples with the exception of TPH-D in sample SB-6-7 which was reported at 16.7 mg/kg. The concentration of TPH-D in SB-6 is below the San Francisco RWQCB's Environmental Screening Level for Residential Properties (shallow soils, 3 meters, groundwater is a potential drinking water source of drinking water). In August 2013, Shaw reviewed regulatory and database records to assess for sensitive receptors. The following are the key findings: DWR records indicate that well installation records for 950 wells have been submitted within 2,000 feet of the subject site in the Santa Clara area. Most of the wells were reported as geologic test wells or groundwater monitoring wells and are not considered sensitive receptors. Two of the reported well records were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. Approximately 10 additional well records were provided which did not identify a concise location in relation to the subject site. The Guadalupe River and Saratoga Creek are the closest surface water bodies to the subject site, located approximately 1.2 miles northeast and 0.85 miles west of the site. Based on the depth of the contaminants of concern and utilities, and the paving which covers the property, it is unlikely that site-related contamination (if any)

MAP FINDINGS

AT&T MOBILITY (Continued)

S101542336

is entering site surface water pathways. Most recent ground water sampling at the subject site did not indicate any contaminants of concern in site monitoring wells. The City of Santa Clara Water Utility supplies drinking water to Santa Clara. Water in the vicinity of the subject site is obtained primarily from water wells. However, the City also imports a portion of the water supply from the San Francisco Hetch Hetchy system and from SCVWD. Drinking water received from this system as a whole is tested on a regular basis, per USEPA and California standards. Two of the reported well records within 2,000 feet of the subject site were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. The impacted area on the subject site is paved with asphalt and concrete, which should preclude any human contact with petroleum-impacted ground water that has been reported at depths ranging from approximately five to six and a half feet bsg. It is very unlikely for workers to come in contact with impacted groundwater during subgrade construction activities. No sensitive receptors were identified during the execution of the SRS.

Completed Document Type: Site Screening
Completed Date: 10/26/1992
Comments: The present level of contamination at the site poses a significant threat to public and environmental health. Therefore, PEA of high priority is recommended. The site consists of 25 acres of land. Both soil and groundwater were contaminated. Soil was contaminated by metals and solvents. Some of the metals were present in the on site soil are as follows: copper, lead, and nickel. The maximum level of 30 ppm of TCE was present in the groundwater and 100,000 ppm (see Note below) of cu was in the on site soil. Groundwater was contaminated by solvents including TCE. TCE levels in the groundwater was 30 ppm. Based on available information, there is a documented observe release at the site. The site poses a significant threat to public and environmental health. Therefore, PEA investigation is required. NOTE: Proposal for Final Cleanup Objectives, 1992 and Montn Technical Report on status compliance, CAMPSI Property, 1992

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 09/24/1981
Comments: MONSANTO: Discovery. Facility identified from Superfund active site. On 11/25/81, facility drive-by. No evidence of waste visible. On 1/7/82 phone follow-up with plant manager. On 01/20/82, Inspection (state): ASP site inspection. On 03/31/82, Final strategy; identified abandoned site. On 11/01/82, Sample results: Mostly volatile organics in groundwater. On 01/20/87, Site screening done pending status due to RWQCB lead. Dump- site excavated 11/82. Source of Contamination currently being investigated by RWQCB. On 01/14/91, DHS received FIT SSI -EPA recommends NFA.

Site History:

The Monsanto Company owned the site from about 1950-1983, the eastern portion of the property was developed and used by Monsanto for the manufacture of plastics and resins. Monsanto discharged liquid wastes on a portion of the property from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the property. Monsanto also maintained one or more above-ground tanks (removed in 1985) and an underground storage tank (UST), which was discovered in 1995. Volatile organic compounds (VOCs), fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found on the site. Monsanto commenced site investigations in 1981. The Regional Water Board adopted Site Cleanup Requirements (SCRs) in 1989 and ammended in 1991, and revised these in 1992. The site is currently regulated under SCR 92-106, and Waste Discharge Requirements (WDR) 90-160 for the reinfiltration of treated groundwater. SCR 92-106 was ammended in 1996 by SCR 96-140. Monsanto has undergone many property ownerships (in chronological order): Hunter Technology Corporation, CAMSI IV partnership, LafayetteHolding Corporation, Spieker Properties (May 16, 1995 - redeveloped to Lafayette Industrial Park), Equity Office Properties (June 2001) and RREEF America REIT II Corp. MMM (Summer 2004). A deed restriction is currently active on this property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: Not reported
RB Case Number: 43S0127
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Benzene, * * METHYL ISOBUTYL KETONE, Xylene

Site History: Organic solvents were first detected in the soils and groundwater at the site in March 1983. The organic solvents were determined to be from underground storage tanks used to store methyl isobutyl ketone (MIBK), methyl ethyl ketone (MEK), toluene, xylene, petroleum naphtha, fish oil, alkyd resin, gasoline and diesel fuel. The tanks, which ranged in age from 14 to 29 years, were emptied after the soil and groundwater contamination was detected. The underground storage tanks and surrounding soil were removed during the summer of 1985 and nine low-flow groundwater extraction wells were installed in the underlying aquifer systems. Site investigation activities conducted since 1987 include the drilling of over 50 boreholes, installation of over 25 groundwater monitoring wells, and extensive site characterization and remedial activities. Groundwater remediation strategy included the installation of groundwater extraction wells and interception trenches. The interception trenches were installed to prevent chemical-bearing groundwater from leaving the site. The pump and treat cleanup activities from extraction wells and interception trenches were conducted from 1987 to 1998. The Board adopted Order number R2-2002-0104 (on October 16, 2002. The new Order instituted MNA as the site groundwater remedial alternative. Annual groundwater monitoring reports are prepared and submitted to the Board

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/23/2006
Comments: Implemented remedy (Cap) continues to be adequately protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan
Completed Date: 09/12/2000
Comments: O&M Plan approved describing required cap maintenance activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 05/04/1999
Comments: The remedial actions consisted of debris removal, excavation and encapsulation of 5,560 cubic yards of lampblack and metal contaminated soil in two onsite consolidation areas, excavation and offsite disposal of approximately 5,720 cubic yards of hydrocarbon impacted soil, removal of a 400-gallon underground storage tank and other concrete debris, as well as proper closure and destruction of four previously unknown onsite abandoned water supply wells. A two-foot cap of clean material including the parking lot baserock layer asphalt concrete layer was then installed over the excavated and consolidated lampblack impacted soil. The impacted soils were consolidated under an asphalt parking area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 01/26/1998
Comments: Sample results from a soil quality evaluation conducted in 1997 under DTSC oversight indicated lead, nickel, and polynuclear aromatic hydrocarbons (PAHs) including but not limited to anthracene, benzo(a)pyrene, and pyrene were found in soil. Lead contaminated soil was found to be the major issue, with concentrations up to 4,100 mg/kg. The RAW required consolidation and capping of impacted soil as well as underground tank removal and capping.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/19/2013
Comments: The City of Santa Clara conducted an annual inspection and submitted the annual summary report as required by section 1.02 of the Land Use Covenant and section 2.4 of the Operation and Maintenance Agreement. About 20 feet of small cracks were observed in the asphalt of the parking lot over the cells where contaminated soil is contained. The cracks are small and will not let significant water penetrate the asphalt. The City Street Department plans to seal the cracks when the weather is drier and warmer.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 03/11/2014
Comments: The City of Santa Clara performed an annual inspection of the parking lot of the City police station where contaminated soil remains in place. During the inspection, the parking lot pavement that serves as a cap was observed to be in good condition with a approximately 20 lineal feet of minor visible cracks. No significant deterioration that would allow surface water to penetrate to cap was observed..

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/05/2015
Comments: The annual inspection was conducted as required by the Land Use Covenant and Operation and Maintenance Plan/Agreement. The cap was observed to be in good condition and showed no signs of significant deterioration that would allow surface water to penetrate through the cap.

Completed Document Type: Removal Action Completion Report
Completed Date: 01/20/1983
Comments: In November 1981, the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), collected information after a routine Interim Status Document (ISD) inspection indicating that the plant was to be closed and demolished. Samples taken by DHS in August 1982 contained asbestos, with levels as high as 6% (plus or minus 4%). Cleanup of the site was required by DHS. The responsibility for site cleanup was placed upon Certainteed. Cleanup activities were overseen by DHS and included the removal of any asbestos fibers in the buildings and on the surface of the property, along with the removal of soil below the settling basin and drying area down to 5 feet. Also, all transformers and capacitors containing PCBs were removed. Additional soil samples were taken and analyzed for asbestos during site cleanup activities. Asbestos levels were less than 1% in samples, the cleanup level goal set by DHS, and the transformers and capacitors containing PCBs were removed from the site.

Background Info: Certainteed Corporation occupied this 26-acre site from 1962-1982 and manufactured asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch which led to a settling basin. The previous owner of the property was Keasby and Mattison, also a manufacturer of asbestos pipe at the

site from 1953-1962. Operations entailed the mixing of around 12% asbestos fiber with 60% concrete. Due to recycling of slurry, varying amounts of slurry and concrete were added to 12% asbestos. During the operation of Certainteed, the company gave permission for the storage of components from other companies (their origins unknown). Some of these components included transformers and conductors, both containing polychlorinated biphenyls (PCBs).

 Classification: Small Small Quantity Generator
 Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Sub Area Name: Test Track Area
Completed Document Type: Operations and Maintenance Report
Completed Date: 05/10/2010
Comments: From January 15th through February 11th, the system was off for short periods of time due to power failures. Each time this occurred, a technician was sent to the site to restart the system as soon as possible. These power failures corresponded with severe weather events. Additionally, on March 17th, the system was off for 18 hours due to an overloaded variable frequency drive (VFD). The VFD was repaired and the system was restarted on March 18th. The total flow volume discharged to the storm drain from the system during this quarter, based on daily average flow volumes, was 2,077,904 gallons. No exceedances to the NPDES permit were observed.

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: Central Plant Area
Completed Document Type: Technical Workplan
Completed Date: 06/10/2014
Comments: The Work Plan presents details for the destruction and replacement of groundwater monitoring wells TW2-55 and TW59-SC in the Central Plant Area. These two monitoring wells were buried and damaged during activities related to the construction of the San Jose Earthquakes soccer stadium. The monitoring wells were located, but could not be repaired. Two new monitoring wells are to be installed near the original wells.

Management Plan will be implemented during the construction.

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: Central Plant Area
Completed Document Type: Soils Management Plan
Completed Date: 11/14/2007
Comments: The Soil Management Plan outlines the procedures for management of subsurface soil and groundwater that may be brought to the surface and is intended to provide for the protection of workers and occupants during construction and redevelopment activities. The Plan identifies the location of the groundwater extraction and treatment system and monitoring wells in order to protect their integrity, presents general health and safety guidelines for Site construction or maintenance workers, and summarizes the portions of the Land Use Covenant that are relevant to the management of soil groundwater, and soil vapor that may be generated by future activities at the Site.

Longitude: -121.927672
Case Type: Cleanup Program Site
Case Worker: LG
Local Agency: Not reported
RB Case Number: 43S1048
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

WDS:

Facility ID: San Francisco Bay 438520004
 Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAG912003 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 2
 Facility Telephone: 4082894285
 Facility Contact: Peter Wan (FMC)
 Agency Name: FMC CORPORATION
 Agency Address: PO BOX 58123
 Agency City,St,Zip: SANTA CLARA 950528123
 Agency Contact: ZAHRA M. ZAHIRALESLAMZADEH
 Agency Telephone: 4082893141
 Agency Type: Private
 SIC Code: 0
 SIC Code 2: Not reported
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
 Primary Waste: CNWTRS
 Waste Type2: Not reported
 Waste2: Contaminated Ground Water
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
 Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Count: 3 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015
Date Data Arrived at EDR: 03/31/2015

	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 05/04/2015	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 05/05/2015	Telephone: 916-323-3400

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

SUBJECT: Rescission of Site Cleanup Requirements for 535 Reed Street, Santa Clara, CA

Dear Mr. Nicolaysen, Mr. Ream, and Mr. Trythall:

Enclosed is Water Board Order No. R2-2006-0016 that was adopted by the Board on March 8, 2006. This Order rescinds the Site Cleanup Requirements for the subject site.

If you have any question, please contact Vincent Christian at (510) 622-2336, or via e-mail at vchristian@waterboards.ca.gov.

Sincerely,

 Bruce H. Wolfe
 Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN FRANCISCO BAY REGION

ORDER NO. R2-2006-0016

RESCISSION OF SITE CLEANUP REQUIREMENTS (ORDER NO. R2-2002-0092) FOR:
BEAVER LUMBER COMPANY, WINKEL PROPERTIES, LLC, AND ALLEN K. REAM
(AS TRUSTEE OF THE MILTON P. REAM TRUST #4)

for the property located at

535 REED STREET
SANTA CLARA
SANTA CLARA COUNTY

The California Regional Water Quality Control Board, San Francisco Bay Region (hereinafter the Board), finds that:

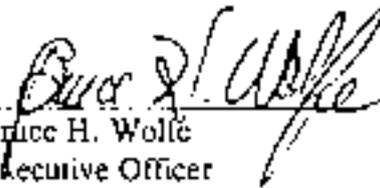

1. **Regional Board Orders:** The Board adopted site cleanup requirements for this site on September 18, 2002 (Order No. R2-2002-0092).
2. **Summary of Investigation and Remediation Activities:** This site is located in a commercial/industrial area of Santa Clara. A lumber yard formerly operated at the site from 1965 to 2001. Soil and groundwater was contaminated with pentachlorophenol (PCP), a wood preservative, from a concrete "dipping" tank formerly used to treat lumber. In July 2001, three monitoring wells were installed near the former dipping tank. In January 2002, the former dipping tank and approximately 300 cubic yards of PCP contaminated soils were excavated and removed from the site. Before backfilling, the standing water in the excavation pit was treated with Oxygen Releasing Compound (ORC), which reduced the PCP concentration in the pit from 2500 micrograms per liter ($\mu\text{g/l}$) to 3.2 $\mu\text{g/l}$. In January 2003, 12 more monitoring wells were installed and approximately 11,400 pounds of Hydrogen Releasing Compound (HRC) was injected into the groundwater through 76 injection points down gradient of the former dipping tank. Ten groundwater monitoring events since the HRC injection indicate that the treatment was effective. PCP concentrations have declined or remained stable in all wells over time. While concentrations are currently above the cleanup goal of 3 $\mu\text{g/l}$, they are relatively low and stable. Other than one anomalous hit of 35 $\mu\text{g/l}$ in October 2005, the highest concentration of PCP in groundwater over the past eight quarters was 13 $\mu\text{g/l}$.

3. **Basis for Rescission:** Soils have been cleaned up to concentrations that do not present a risk to human health, the environment, or to groundwater from leaching. The HRC injections have reduced groundwater pollution to asymptotic levels. Subsequent monitoring has shown no evidence of a rebound in PCP concentrations in groundwater. The dischargers have performed a well survey indicating that no drinking water supply wells are likely to be impacted from this site. Natural processes should reduce the concentrations of PCP in groundwater to drinking water standards before such time as the groundwater may be needed for water supply purposes. Consequently, it is appropriate to terminate groundwater monitoring activities and rescind Order No. R2-2002-0092. No further remedial action is needed at this site.
4. **CEQA:** This action rescinds an order to enforce the laws and regulations administered by the Board. As such, this action is categorically exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to Section 15321 of the Resources Agency Guidelines.
5. **Notification:** The Board has notified the discharger and all interested agencies and persons of its intent under California Water Code Section 13304 to rescind site cleanup requirements for the discharge, and has provided them with an opportunity to submit their written comments.
6. **Public Hearing:** The Board, at a public meeting, heard and considered all comments pertaining to this discharge.

IT IS HEREBY ORDERED, pursuant to Section 13304 of the California Water Code, that Order No. R2-2002-0092 is rescinded.

IT IS FURTHER ORDERED that the dischargers shall properly close all monitoring and extraction wells consistent with applicable local agency requirements, and shall document such closure in a technical report to be submitted to the Board within 30 days following the completion of closure activities.

I, Bruce H. Wolfe, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Francisco Bay Region, on March 8, 2006.

Bruce H. Wolfe
Executive Officer

Permit No: 701989

Facility: Xeres Ventures, LLC

In order to maintain the operating permit, the permit holder must comply with all regulatory requirements, to include, but not all inclusive of the number items below:

* Underground Tank Program, CHSC Division 20, Chapter 6.7 and 6.75 and Title 23 CCR Chapters 16 and 18

1. In the event of a spill, leak or other unauthorized release, the permittee must comply with the requirements of Title 23, CCR Chapter 16, Article 5.
2. The permittee must comply with, and maintain on site, copies of a current permit, written monitoring procedures, emergency response plans, and a plot plan designating the location where monitoring will be performed. Title 23, Section 2712(i). Copies of these items shall be sent to the local agency. Title 23, CCR Chapter 16, 2632(b) and Section 2712.
3. The permittee must notify the City of Santa Clara Fire Department within thirty (30) days after any changes in the usage of any UST including: a) The storage of new hazardous substances; b) changes in any monitoring procedure; c) change of owner/operator. The City of Santa Clara Fire Department may review, modify or terminate the Permit to Operate upon receiving notification of the above changes.
4. The permittee must have a qualified person perform yearly maintenance testing on all leak detection equipment, maintain files on site regarding this maintenance and provide documentation of such tests to the City of Santa Clara Fire Department."")
5. The permittee must obtain permission from the City of Santa Clara Fire Department prior to the modification of an underground tank system.
6. Written monitoring and maintenance records shall be maintained on site or off site at a readily available location, if approved by the City of Santa Clara Fire Department, for a period of at least 3 years, 6 1/2 years for cathodic protection maintenance records, and 5 years for written performance claims pertaining to release detection systems, and calibration and maintenance records for such systems. Records and repairs, lining, and upgrades shall be maintained on site or at another location for the remaining life of the underground storage tank. These records shall be made available, upon request within 36 hours, to the City of Santa Clara Fire Department or the State Water Board. Title 23, CCR Chapter 16, Section 2712(b).
7. The permittee must submit annual permit fees and the state surcharge and maintain a current City of Santa Clara "Annual Business Tax Certificate/Fire Permit.
8. Facilities will be inspected on an annual basis, for compliance with the above conditions. Please be advised that any violation of the above conditions may be cause for revocation of the permit to operate.

Piping Leak Detection Code Definitions:

Monitoring System Equipment Certification

For Use By All Jurisdictions Within The State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST system within 30 days of test date.

A. General Information

Facility Name: DuPont Fabros Technology, Inc. Bldg. No.: _____

Site Address: 555 Reed St. City: Santa Clara, CA Zip: 95050

Facility Contact Person: Manager Contact Phone No.: (202) 728-0044

Make/Model of Monitoring System: VR TLS-350 (1) Date of Testing/Servicing: 6-8-15 to 6-12-15

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

<p>Tank ID: 01-Diesel</p> <input type="checkbox"/> In - Tank Gauging Probe. Model: <u>VR 846390-112</u> <input type="checkbox"/> Annular Space or Vault Sensor. *If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufactures' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the; (check all that apply): System set-up Alarm history report

Technician Name (print) Jose Rodriguez Signature [Signature]

Mfg. Cert.#: B37364 ICC# 8024952-CJ License No.: 485184

Testing Company Name: Service Station Systems Phone No.: (408) 971-2445

Testing Company Address: 680 Quinn Ave., San Jose, CA 95112 Date of Testing/Servicing: 6-8-15 to 6-12-15

Site Address: 555 Reed St.

Date of Testing/Service: 6.8.15 to 6.12.15

D. Results of Testing / Servicing

Software Version Installed: 129.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>90</u> %
<input checked="" type="checkbox"/> Yes*	No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? (Attach set-up reports, if applicable.)
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when those deficiencies were or will be corrected.

E. Comments: Replaced TLS Battery for PM purposes.

Secondary Brine Sensors (794380-304): L1 (T1A Sump Glycol), L2 (T1DF Sump Glycol), L3 (T1B Sump Glycol), L4 (T1C Sump Glycol), L5 (T2A Sump Glycol), L6 (T2DF Sump Glycol), L7 (T2B Sump Glycol) & L8 (T2C Sump Glycol) - Tested & Passed.

Discriminating Sensors # (794380-352): L11 (T1B Sump), L12 (T1C Sump), L15 (T2B Sump), L16 (T2C Sump) - Tested & Passed.

Replaced L1, L3, L7 & L8 (794380-304) brine sensors
retested and Passed

Site Address: 555 Road St.

Date of Testing/Service: 6-8-15 to 6-12-15

F. In Tank Gauging / SRR Equipment:

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SRR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLD's are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h. (1.); <input type="checkbox"/> 0.1 g.p.h. (2.); <input type="checkbox"/> 0.2 g.p.h. (3). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

II. Comments:

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating LST systems within 30 days of test date.

Manufacturer: <u>Venture Box</u>		Model: <u>463</u>		System Type: <input type="checkbox"/> Pressure; <input checked="" type="checkbox"/> Vacuum	
Sensor ID	Component(s) Monitored by this Sensor				
<u>S-1</u>	<u>2A - FOS Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-2</u>	<u>2A - FOR Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-3</u>	<u>2B - FOS Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-4</u>	<u>2B - FOR Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-5</u>	<u>2C - FOS Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-6</u>	<u>2C - FOR Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-7</u>	<u>2E-2 Annular Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-8</u>	<u>1A - FOS Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-10</u>	<u>1A - FOR Pipe Vac</u>				
	Sensor Functionality Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
<u>S-11</u>	<u>1B - FOS Pipe Vac</u>				
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail		Interstitial Communication Test Result: <input checked="" type="checkbox"/> Pass; <input type="checkbox"/> Fail		
How was interstitial communication verified?					
<input checked="" type="checkbox"/> Leak Introduced at Per End of Interstitial Space; <input checked="" type="checkbox"/> Gauge; <input type="checkbox"/> Visual Inspection; <input type="checkbox"/> Other (Describe in Sec. J, below)					
Vacuum was restored to operating levels in all interstitial spaces: <input checked="" type="checkbox"/> Yes; <input type="checkbox"/> No (If no, describe in Sec. J, below)					

J. Comments: _____

¹ If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the farthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

6-8-15 to 6-12-15

I. Results of Vacuum/Pressure Monitoring Equipment Testing

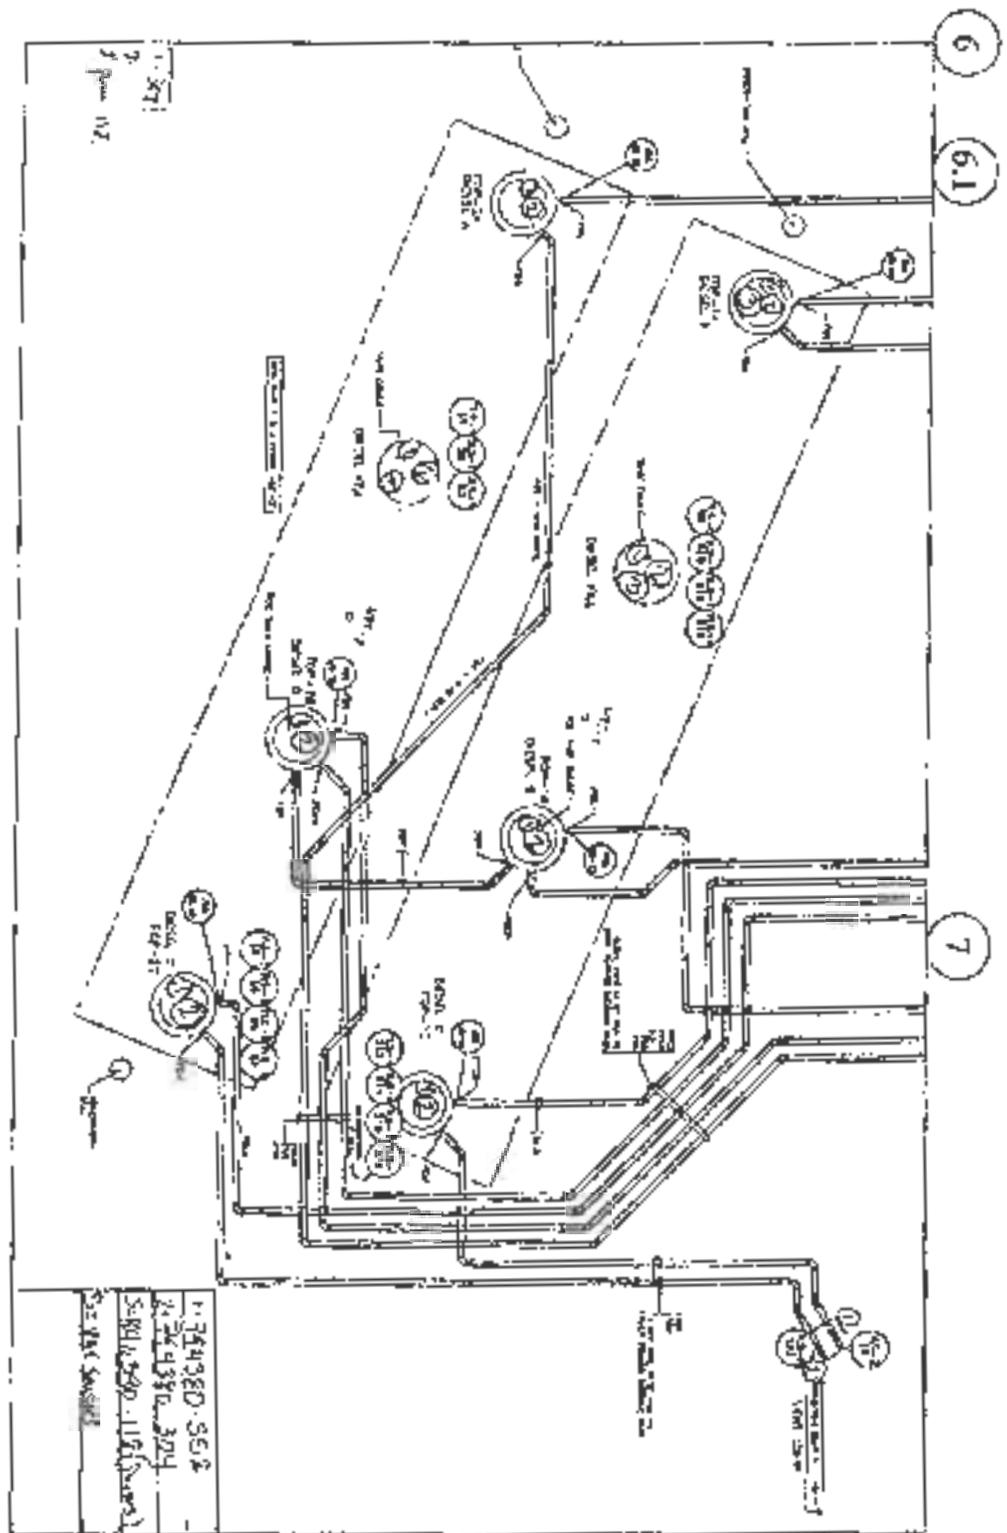

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes <input type="checkbox"/> No
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>0</u> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? (Attach set-up reports, if applicable.)
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments: Both tanks have 4 Sumps. Each Sump has a (794380-352) Sensor (L7 thru L12) & (794380-304) Secondary Brine Sensor (L1 thru L6) - Tested & Passed.

(L13) Vent Sump Sensor (794380-352) & (L14) Secondary Brine Sensor (794380-304) - Tested & Passed.

2 Valve Boxes (L13 & L14) - 1 near Tank Pad & 1 along the building, both with (794380-352) & Secondary Brine Sensors (L7 & L12), both with (794380-304) - Tested & Passed.

Inside building there are 26 Sensors (L17-L42) # (794390-420) on the 2nd Floor & 2 Sensors (L43 & L44) # (794390-420) on the 1st Floor - Tested & Passed.

Site Address: 555 Reed St. Date of Testing/Service: 6-15-96 (12-95)

F. In - Tank Gauging / NIR Equipment:

- Check this box if tank gauging is used only for inventory control.
 Check this box if no tank gauging or NIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section II below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLD's are not installed.

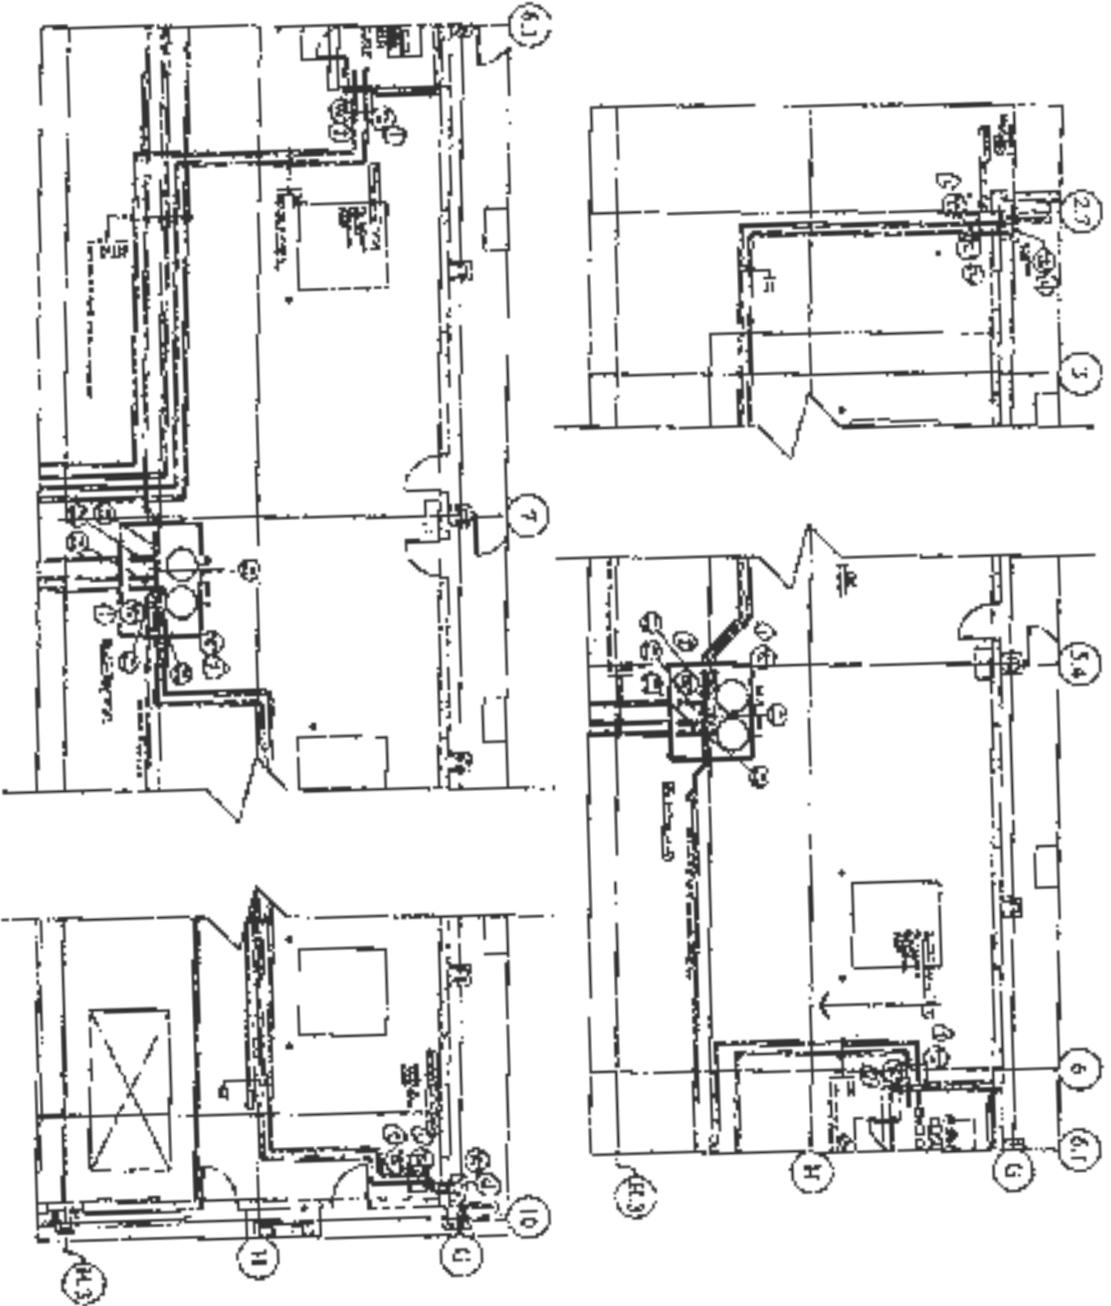

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h. (1.); <input type="checkbox"/> 0.1 g.p.h. (2.); <input type="checkbox"/> 0.2 g.p.h. (2). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section II below, describe how and when these deficiencies were or will be corrected.

Monitoring System Equipment Certification

For Use By All Jurisdictions Within The State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST system within 30 days of test date.

A. General Information

Facility Name: DuPont Fabros Technology, Inc. Bldg. No.: _____
 Site Address: 555 Reed St. City: Santa Clara, CA Zip: 95050
 Facility Contact Person: Manager Contact Phone No.: (202) 728-0044
 Make/Model of Monitoring System: VR TLS-350 (3) Date of Testing/Service: 6-8-15 to 6-12-15

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

<p>Tank ID: <u>03 Diesel</u></p> <input type="checkbox"/> In - Tank Gauging Probe. Model: <u>VR 846380-112</u> <input type="checkbox"/> Annular Space or Vault Sensor. *If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the: (check all that apply): System set-up Alarm history report

Technician Name (print) Jesse Rodriguez Signature: Jesse Rodriguez
 Mfg. Cert.#: B37358 ICC# 5024952-01 License No.: 485184
 Testing Company Name: Service Station Systems Phone No.: (408) 971-2445
 Testing Company Address: 680 Quinn Ave., San Jose, CA 95112 Date of Testing/Service: 6-8-15 to 6-12-15

Site Address: 555 Reed St.

Date of Testing/Service: 6-25-10-12:45

D. Results of Testlog / Servicing

Software Version Installed: 13349

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>90</u> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section F, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? (Attach set-up reports, if applicable)
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments: Replaced TLS Battery for PM purposes.

Secondary Brine Sensors (794380-304): L1 T3 A Sump Glycol), L2 T3 OF Sump Glycol), L3 T3 B Sump Glycol), L4 T3 C Sump Glycol), L5 T4 A Sump Glycol), L6 T4 DF Sump Glycol), L7 T4 B Sump Glycol) & L8 T4 C Sump Glycol) - Tested & Passed.

Discriminating Sensors # (794380-352): L11 T3 B Sump), L12 T3 C Sump), L16 T4 B Sump), L16 T4 C Sump) - Tested & Passed.

Site Address: 555 Road St.

Date of Testing/Service: 6-8-15 to 6-18-15

F. In-Tank Gauging / SIR Equipment:

- Check this box if tank gauging is used only for inventory control
 Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLD's are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h. (1); <input type="checkbox"/> 0.1 g.p.h. (2); <input type="checkbox"/> 0.2 g.p.h. (2). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufactures' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the; (check all that apply): System set-up Alarm history report

Technician Name (print) José Rodriguez Signature: [Signature]

Mfg. Cert.#: 137358 ICC# 8024952-47 License No.: 485184

Testing Company Name: Service Station Systems Phone No.: (408) 971-2445

Testing Company Address: 680 Quinn Ave., San Jose, CA 95112 Date of Testing/Servicing: 6-8-15 to 6-12-15

Site Address: 555 Reed St.Date of Testing/Service: 6-8-15 10612A**D. Results of Testing / Servicing**Software Version Installed: 133.03

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes <input type="checkbox"/> No
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <input type="checkbox"/> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? (Attach set-up reports, if applicable.)
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments: Both tanks have 4 Sumps. Each Sump has a (794380-352) Sensor (L¹) thru L¹²) & (794380-304) Secondary Brine Sensor (L¹ thru L¹) - Tested & Passed.

(L¹³)Vent Sump Sensor (794380-352) & (L¹⁵) Secondary Brine Sensor (794380-304) - Tested & Passed.

2 Valve Boxes (L⁵ & L¹⁴) - 1 near Tank Pad & 1 along the building, both with (794380-352) & Secondary Brine Sensors (L⁷ & L⁴), both with (794380-304) - Tested & Passed.

Inside building there are 25 Sensors (L¹⁷-L⁴²) # (794380-420) on the 2nd Floor & 2 Sensors (L⁴³ & L⁴⁴) # (794380-420) on the 1st Floor - Tested & Passed.

Site Address 555 Reed St.

Date of Testing/Service: 6-2-15 to 6-12-15

F. In-Tank Gauging / SIR Equipment:

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residua build-up?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLD's are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h. (1); <input type="checkbox"/> 0.1 g.p.h. (2); <input type="checkbox"/> 0.2 g.p.h. (2). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

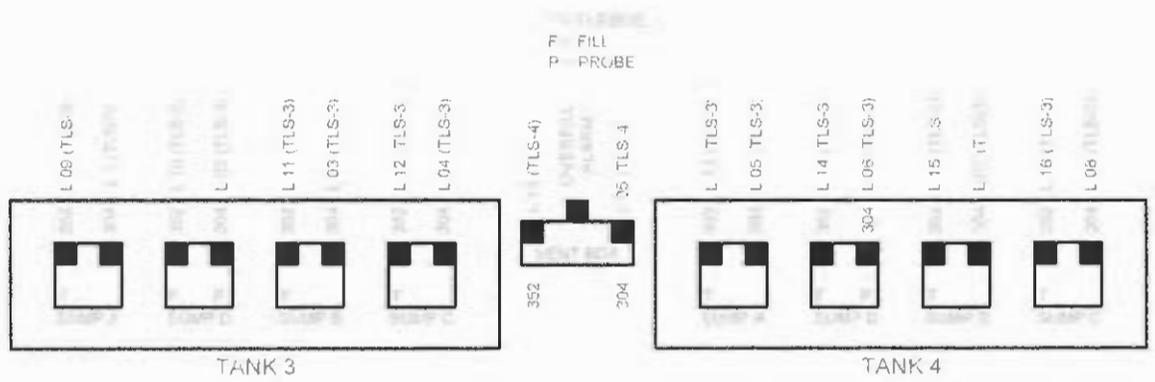

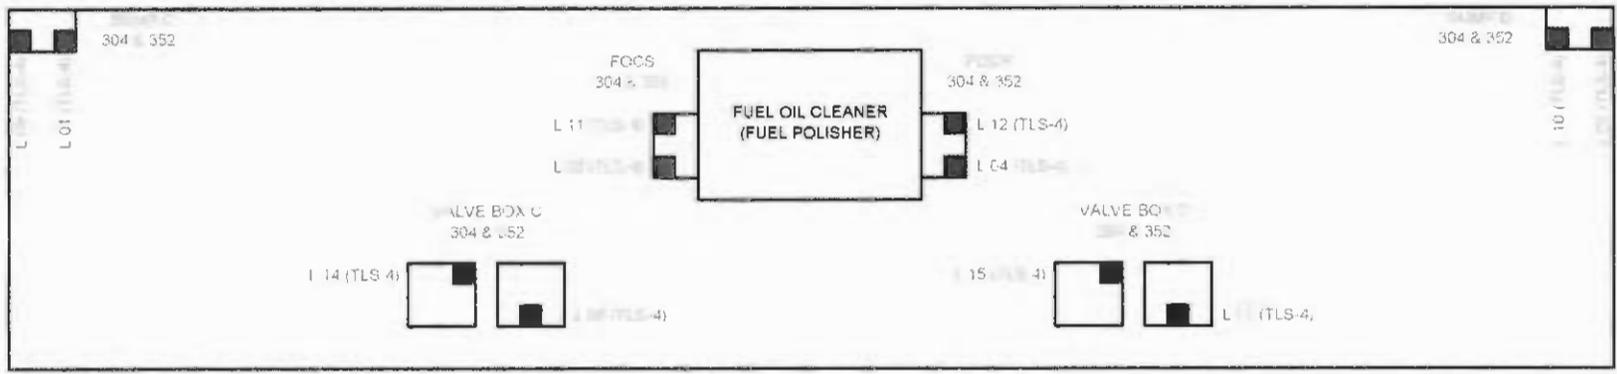

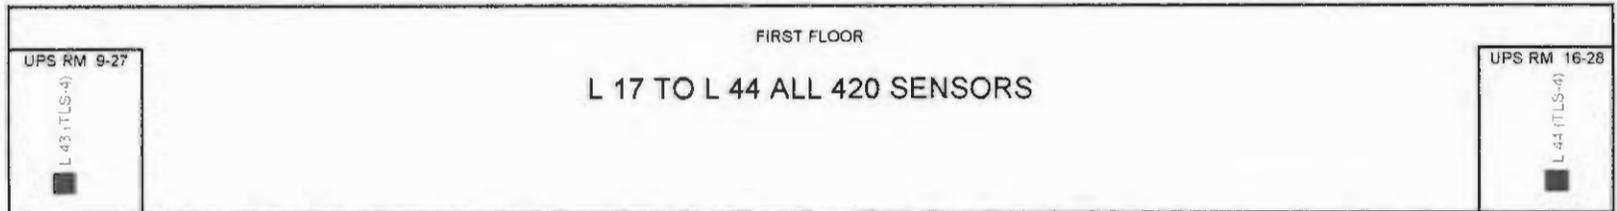

* In Section H below, describe how and when these deficiencies were or will be corrected.

APPENDIX E

ASTM USER QUESTIONNAIRE

ASTM E 1527-13 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: _____

Person Interviewed/Title: _____ Date: _____

If known, when was the property initially developed? _____

If different, when were the current building(s) on the property constructed? _____

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes ___ No ___ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes ___ No ___

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes ___ No ___

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes ___ No ___

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes ___ No ___

If you answered yes to any of the questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

Please provide the following property contact information:

Property Owner: _____

Phone Number: _____

Key Site Personnel: _____

Phone Number: _____

Past Owner: _____

Phone Number: _____

Signature:  _____

Date: 9/3/2015 _____

AEI

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DuPont Fabros Development LLC to conduct a Phase I Environmental Site Assessment (ESA), in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 500-520 Mathew Street in the City of Santa Clara, Santa Clara County, California. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

Property Description

The subject property is located on the south side of Mathew Street in a mixed commercial and industrial area of Santa Clara. The property totals approximately two acres and is improved with a one-story warehouse building totaling approximately 49,000 square feet. The building is occupied by Premier Auto Body Shop, Complete RV Repair Shop, and the California Paper Storage Center. On-site operations consist of auto body work, motor home repair, paper roll storage, and office activities. In addition to the subject property building, the property is improved with asphalt-paved parking areas and associated landscaping.

According to historical sources, portions of the current subject property building were constructed in 1968 by Beaver Lumber Company for use as a warehouse/storage facility. Two additions were made to the building in the 1970s to complete the current configuration. The subject property has been occupied by several commercial/industrial tenants since at least 1970, including Simpson Building Supply and Timber since 1970 until 1986, Northern Hardwood, Inc. since at least 1991 until 2001. Prior to the construction of the building, the property was agricultural land.

The immediately surrounding properties consist of Mathew Street followed by the California Paper Processing Facility to the north, AMI Recycling to the east, railroad tracks followed by a vacant industrial/commercial building to the west, and a vacant industrial property to the south.

Based on groundwater monitoring data from subsurface investigations performed on the south adjacent property, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast, and present at a depth of five feet below ground surface (bgs).

Findings

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- According to an *Underground Storage Tank Removal Permit* issued by the Santa Clara Fire Department (SCFD), one (1) 10,000-gallon diesel fuel underground storage tank (UST) was removed from the subject property on November 4, 1986. The owner is listed as Beaver Lumber. Confirmation samples were taken from the tank excavation walls and floor, which were analyzed for Total Volatile Hydrocarbons (TVH). Concentrations of TVH were not detected, and it was determined by the SCFD that a release did not occur. Based on the result of the confirmation sampling, the historical presence of the UST is not expected to represent a significant environmental concern.
- The south adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the Spills, Leaks, Investigations, and Cleanups database. The site is located hydrologically upgradient from the subject property. The site was monitored by the San Francisco Regional Water Quality Control Board (SFRWQCB) and is listed as closed. This listing is in relation to onsite pentachlorophenol (PCP) contamination from a PCP aboveground storage tank located at the site. Beaver Lumber Company reportedly utilized a portion of the subject property during the 1970s and 1980s as a storage facility and shipping receiving area, in which a UST was utilized for refueling trucks (discussed above). The plume of PCP contamination appears to have reached the subject property. According to the SFRWQCB Geotracker website, two monitoring wells were installed on the subject property in order to determine if contamination was present. The most recent groundwater monitoring event prior to closure took place on July 28, 2005. During that event, MW-5, located on the southern boundary of the subject property, yielded non-detectable concentrations of PCP. MW-20S, also located along the southern boundary, yielded 11 milligrams per liter (mg/L) of PCP. The SFRWQCB determined that PCP levels had significantly attenuated and would continue to do so in the future, and the south adjacent property reached closure on March 9, 2006. Both of the wells located on the subject property were decommissioned in 2006. Based on this information and the nature of former subject property use, no further action or investigation appears to be warranted at this time. However, any proposed disturbance of the subsurface for construction or other purposes would require the implementation of engineering controls to protect the health and safety of workers involved with subsurface activities.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. However, the entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 500-520 Mathew Street in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 500-520 Mathew Street in the City of Santa Clara, Santa Clara County, California (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I Environmental Site Assessment is to identify potential environmental liabilities associated with the presence of hazardous materials, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 Significant Assumptions

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. Except as set forth in this report, AEI Consultants has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. AEI Consultants assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes

the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 Limitations

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-05.

If requested by the client, these non-scope issues are discussed in Section 6.2. Otherwise, the purpose of this investigation is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-05 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-05.
- 2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
- 3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market

conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 Data Gap and Data Failure

According to ASTM E1527-05, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-05 “data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met”. Pursuant to ASTM Standards, historical sources are required to document property use back to the property’s first developed use or back to 1940, whichever is earlier.

The following data gaps were identified during the course of this investigation.

- On May 11, 2007, the Santa Clara County Health Department (SCCHD) was contacted to review files on the subject property and nearby sites of concern. Files at the SCCHD may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area. Due to the time constraints associated with this report, AEI was not able to obtain records from the SCCHD. However, based on the detailed information gathered from other historical sources, such as aerial photographs and Water Quality Board records, the absence of this information is not expected to alter the findings of this investigation.
- Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations, this data gap is not expected to significantly alter the overall findings of this investigation.

Due to time constraints, the client has requested that AEI issue this report despite the above-listed limitations.

1.5 Reliance

This investigation was prepared for the sole use and benefit of DuPont Fabros Development LLC. Neither this report, nor any of the information contained herein shall be used or relied upon for any purpose by any person or entity other than DuPont Fabros Development LLC.

2.0 SITE AND VICINITY DESCRIPTION

2.1 Site Location and Description

The subject property is located on the south side of South Mathew Street in a mixed commercial and industrial area of Santa Clara. The property totals approximately two acres and is improved with a one-story warehouse building totaling approximately 49,000 square feet. The building is occupied by Premier Auto Body Shop, Complete RV Repair Shop, and the California Paper Storage Center. On-site operations consist of auto body work, motor home repair, paper roll storage, and office activities. In addition to the subject property building, the property is improved with asphalt-paved parking areas and associated landscaping.

The subject property was identified in the regulatory database as a small quantity generator of hazardous waste, which is further discussed in Section 5.3

The Assessor's Parcel Number (APN) for the subject property is 230-03-0751. Heating and cooling systems on the subject property are fueled by natural gas and electricity provided by Pacific Gas & Electric. Potable water and sewage disposal are provided by municipal services.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 Site and Vicinity Characteristics

The subject property is located in a mixed commercial and industrial area of Santa Clara. The immediately surrounding properties consist of Mathew Street followed by the California Paper Processing Facility to the north, AMI Recycling to the east, railroad tracks followed by a vacant industrial/commercial building to the west, and a vacant industrial property to the south.

The south adjacent property was identified as a Spills, Leaks, Investigations and Cleanups (SLIC) site and a Leaking Underground Storage Tank (LUST) site in the regulatory database. The west adjacent property was identified as a LUST, Voluntary Cleanup Program site, and an ENVIROSTOR site. The north adjacent property was identified as a small quantity generator of hazardous waste and a LUST site. These listings are further discussed in Section 5.3.

2.3 Geology and Hydrogeology

According to information obtained from the US Geological Survey (USGS), the area surrounding the subject property is underlain by sedimentary deposits of the Cenozoic-era. Based on a review of the US Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Botella Series. According to subsurface investigations performed on the south adjacent property, the soils underneath the subject property consist of silty and sandy clays up to a depth of 11 and ½ feet below ground surface (bgs), followed by clayey silt.

Based on a review of the USGS San Jose West, California Quadrangle Topographic Map, the subject property is situated approximately 53 feet above mean sea level, and the local topography is relatively flat with a slight slope to the northeast. The nearest surface water is Coyote Creek, located approximately 3/4-mile to the northeast. Based on groundwater monitoring data obtained from previous subsurface investigations performed at the south adjacent property, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast and is expected to be encountered at five feet bgs.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

According to historical sources, portions of the current subject property building were constructed in 1968 by Beaver Lumber Company for use as a warehouse/storage facility. Two additions were made to the building in the 1970s to complete the current configuration. The subject property has been occupied by several commercial/industrial tenants since at least 1970, including Simpson Building Supply and Timber since 1970 until 1986, Northern Hardwood, Inc. since at least 1991 until 2001. Prior to the construction of the building, the property was agricultural land.

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. However, the entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

3.1 Aerial Photograph Review

On May 11, 2007, AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Date: 1939 Scale: 1" = xxx' OR 1:xxxx	Date: 1982 Scale: 1" = xxx' OR 1:xxxx
Date: 1956 Scale: 1" = xxx' OR 1:xxxx	Date: 1993 Scale: 1" = xxx' OR 1:xxxx
Date: 1965 Scale: 1" = xxx' OR 1:xxxx	Date: 1999 Scale: 1" = xxx' OR 1:xxxx
Date: 1974 Scale: 1" = xxx' OR 1:xxxx	Date: 2005 Scale: Unknown

In the 1939 aerial photograph, the subject property and all of the adjacent properties appear to be agricultural land. Railroad tracks appear to be developed along the western boundary of the subject property as they are today.

In the 1956 aerial photograph, the north adjacent property appears to be developed with several factory buildings much like it is today. The west adjacent property appears under development. Mathew Street appears developed along the northern boundary of the subject property. No other significant changes were noted.

In the 1965 aerial photograph, the west adjacent property appears to be developed with several medium-sized commercial/industrial structures. No other significant changes were noted.

In the 1974 aerial photograph, the subject property appears to be developed with the current building. The east adjacent property appears to be developed with a portion of the building currently occupied by AMI Recycling. The south adjacent property appears to be developed with the two current warehouse/storage structures. The west adjacent property appears to be developed with one (1) large industrial structure and one medium-sized commercial/industrial structure. No other significant changes were noted.

In the 1982 aerial photograph, the west adjacent property appears to be developed with one commercial/industrial structure. The east adjacent property appears to be developed with the complete building currently occupied by AMI Recycling. No other significant changes were noted.

No significant changes were noted in the 1993, 1999, and 2005 aerial photographs.

If available, high-quality copies of reviewed aerial photographs are included as Figure 3.

3.2 Regulatory Agencies

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested. Specifically AULs are comprised of engineering controls (EC) and institutional controls (IC).

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property. *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

3.2.1 Health Department

On May 11, 2007, the Santa Clara County Health Department (SCCHD) was contacted to review files on the subject property and nearby sites of concern. Files at the SCCHD may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

Due to the time constraints associated with this report, AEI was not able to obtain records from the SCCHD. However, based on the detailed information gathered from other historical sources, such as aerial photographs and Water Quality Board records, the absence of this information is not expected to alter the findings of this investigation.

3.2.2 Fire Department

On May 18, 2007, the Santa Clara Fire Department (SCFD) was visited for information on the subject property to identify any evidence of previous or current hazardous material usage.

AEI was provided with the following documentation:

Underground Storage Tank Removal Permit, SCFD (November 4, 1986)

The document indicated that a permit was issued for the removal of one (1) 10,000-gallon diesel fuel Underground Storage Tank (UST). The owner is listed as Beaver Lumber, who reportedly utilized the UST to refuel their trucks. Confirmation samples were taken from the tank excavation walls and floor, which were analyzed for Total Volatile Hydrocarbons (TVH). Concentrations of TVH were not detected, and it was determined by the SCFD that a release did not occur.

Based on the result of the confirmation sampling, the historical presence of the UST is not expected to represent a significant environmental concern.

3.2.3 Building Department

On May 18, 2007, the Santa Clara Building Department (SCBD) was visited for information on the subject property in order to identify historical tenants and property use. Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

Year(s)	Owner/Applicant	Description of Permit / Building Use
1968	Beaver Lumber Company	Construction Permit (500)
1971	Beaver Lumber Company	Addition Permit (500)
1976	Not Listed	Addition Permit (500)
1988	Not Listed	Tenant Buildout Permit (520)
1995	Not Listed	Tenant Buildout Permit (510)

Beaver Lumber Company occupied the subject property from approximately 1968 until at least 1986. A UST was removed from the site in 1986 in association with this tenant, which is further discussed in Section 3.2.2. Beaver Lumber Company also owned the south adjacent property, which has had two LUST incidents and one spills incident, all of which are closed. However, according to historical Sanborn Maps and information obtained from local agencies, it does not appear that major operations took place at the subject property and the former tenant is not

expected to represent a significant environmental concern. Refer to Section 5.3 for more information concerning the incidents that have occurred at the south adjacent property.

3.2.4 Planning Department

On May 18, 2007, the Santa Clara County Planning Department (SCCPD) was contacted for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the SCCPD.

3.2.5 Department of Toxic Substances Control

On May 11, 2007, the Department of Toxic Substances Control (DTSC) was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the DTSC.

3.2.6 Regional Water Quality Control Board

On May 11, 2007, the San Francisco Regional Water Quality Control Board (SFRWQCB) was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the SFRWQCB.

3.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resource's collection of Sanborn Fire Insurance maps on May 11, 2007.

In the 1961 map, the subject property is vacant. The south adjacent is occupied by the Pacific Redwood Casket Company, which occupies the southern portion of the site. Six structures are developed, including a casket manufacturing building, a lumber shed, a lumber storage building, a steam dry kiln building, a sawdust bin, and an unnamed warehouse structure. The west adjacent property is vacant beyond railroad tracks. The east adjacent property is also vacant. The north adjacent property is occupied by a large Paper Production facility as it is today.

In the 1966 map, the south adjacent property is additionally developed with another lumber storage building and two storage sheds. No other significant changes were noted.

3.4 City Directories

A search of historic city directories was conducted for the subject property through Environmental Data Resources and the Santa Clara Public Library on May 18, 2007. Directories were available and reviewed for the years 1922, 1925, 1926, 1930, 1931, 1935, 1936, 1940, 1942, 1946, 1950, 1955, 1957, 1960, 1962, 1963, 1966, 1968, 1970, 1974, 1975, 1978, 1980, 1982, 1985, 1986, 1991, 1996, 2000, 2001 and 2006. The following table summarizes the results of the city directory search.

City Directory Search Results

Year(s)	Occupant Listed
1922-1968	Addresses Not Listed in Research Source
1970	Simpson Building Supply (500), Remaining Addresses not Listed in Research Source
1974-1986	Simpson Building Supply (500), Simpson Timber (520), Remaining Addresses not Listed in Research Source
1991	Premier Body Shop (500), Northern Hardwood, Inc. (520), Remaining Addresses not Listed in Research Source
1996-2001	Premier Body Shop (500), American Camper (504), Northern Hardwood, Inc. (520), Remaining Addresses not Listed in Research Source
2006	Premier Body Shop (500), Complete RV Repair (504), California Paperboard (520), Remaining Addresses not Listed in Research Source

Based on the above information, the subject property has been occupied by several commercial/industrial tenants since at least 1970, including Simpson Building Supply and Timber since 1970 until 1986, Northern Hardwood, Inc. since at least 1991 until 2001. Based on the period of time that Premier Body Shop has occupied the site and the current operations observed (further discussed in Section 6.1), this tenant is not expected to represent a significant environmental concern. California Paperboard utilizes the subject property solely for the storage of paper reams and is not expected to represent a significant environmental concern. According to a previous environmental investigation performed at the subject property, Simpson Building Supply and Timber and Northern Hardwoods, Inc. utilized the subject property solely as a storage facility and are not expected to represent a significant environmental concern.

4.0 INTERVIEWS AND USER PROVIDED INFORMATION

4.1 Interviews

Pursuant to ASTM E1527-05, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

4.1.1 Interview with Owner

The subject property owner, Mr. Alan Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.2 Interview with Report User

The report user, DuPont Fabros Development, LLC, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.3 Interview with Key Site Manager

The key site manager, Mr. Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.4 Past Owners, Operators and Occupants

Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations, this data gap is not expected to significantly alter the overall findings of this investigation.

4.1.5 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

4.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. In addition, pursuant to ASTM E1527-05, the User completed the *ASTM User Questionnaire*. Please refer to Appendix C: References for a copy of the questionnaire.

4.2.1 Title Records/Environmental Liens/AULs

The User did not provide any title records, AULs or documentation indicating environmental liens encumbering the subject property or any information regarding previous uses or ownership of the subject property that indicated recognized environmental conditions.

4.2.2 Specialized Knowledge

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

4.2.3 Valuation Reduction for Environmental Issues

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

4.2.4 Commonly Known or Reasonably Ascertainable Information

The User did not inform AEI of any commonly known or reasonably ascertainable information about that the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

4.2.5 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by the Client during this investigation. A summary of this information follows:

Phase I Environmental Site Assessment, E2C, Inc. (September 18, 2000)

The report was performed for the subject property as well as the south adjacent property. The report confirmed that the subject property was formerly developed agriculturally since at least 1939 until the late 1960s, when it was developed with a portion of the current building. Two

additions were made throughout the 1970s. The report confirmed that the subject property was occupied by Simpson Building Supply from 1970 until at least 1986, Premier Body Shop since at least 1990, and American Camper and Northern Hardwoods in the 1990s. Beaver Lumber Company reportedly utilized a portion of the subject property during the 1970s and 1980s as a storage and shipping and receiving facility, in which one UST (discussed in Section 3.2.2) was utilized to refuel onsite trucks. According to the report, Simpson Building Supply and Timber and Northern Hardwoods, Inc. utilized the subject property solely as a storage facility and are not expected to represent a significant environmental concern.

The report noted that six USTs were known to have existed on the south adjacent property. Two LUST incidents were reported for the USTs. Several monitoring wells were installed at the site between 1985 and 2002 to delineate the contamination. Total petroleum hydrocarbons (TPH) as gasoline and diesel, and Benzene, Toluene, Ethylbenzene, and Xylene (BTEX) concentrations were detected in samples in the immediate vicinity of the UST areas. A Pentachlorophenol (PCP) aboveground tank was noted to have existed on the south adjacent property as well, and was addressed as an environmental concern.

Several 55-gallon drums were observed on the subject property at the time of the report, and it was recommended that all empty drums be properly disposed of. No other environmental concerns were identified for the subject property.

Documentation Report for Destruction of 10 A-Zone Monitoring Wells, Stellar Environmental Solutions, Inc. (Stellar) (March 23, 2006)

This report concerned the PCP contamination that was located on the south adjacent property. According to the report, the site has undergone remedial activities for the release of PCP from an AST since 1985. The SFRWQCB granted closure to the site on March 9, 2006, and requested that eleven (11) installed monitoring wells be properly decommissioned. Two of those monitoring wells were located on the subject property. Stellar reported that it could not access one of the monitoring wells at the south adjacent property, MW-16S, due to a large pile of construction debris being located on top of the well. However, Stellar properly decommissioned ten (10) remaining wells, including the two wells on the subject property, and included regulatory documentation in the appendices of their report.

Based on the proper decommissioning of the onsite wells, the former monitoring wells are not expected to represent a significant environmental concern.

5.0 REVIEW OF REGULATORY AGENCY RECORDS

The following information was obtained through a search of electronically compiled federal, state, county, and city databases provided by Environmental Data Resources, Inc. (EDR). The database search includes regulatory agency lists of known or potential hazardous waste sites, landfills, hazardous waste generators, and disposal facilities in addition to sites under investigation. The information provided in this report was obtained from publicly available sources. The locations of the sites listed in this report are plotted with a geographic information system utilizing geocoding of site addresses. The accuracy of these locations is generally +/- 300 feet. AEI's field representative has attempted to confirm the locations of listings on or adjacent to the subject property. Refer to the radius map (Appendix B: Regulatory Database Review Report) for the locations of the sites in relation to the subject property.

5.1 Records Summary

DATABASE REVIEWED	SUBJECT PROPERTY	ADJACENT PROPERTY
Identification as National Priorities List (NPL) "Superfund" site	No	No
Identification as a Federal Delisted NPL site	No	No
Identification as CERCLIS and/or CERCLIS/NFRAP site	No	No
Identification as hazardous waste handler and/or generator (RCRA-TSD, LG-GEN and/or SM-GEN)	Yes	Yes
Identification as RCRA CORRACTS site	No	No
Identification in Federal Institutional Control/Engineering Control Registries	No	N/A
Identification as an Emergency Response Notification Systems (ERNS) site	No	N/A
Identification as Historical State (Historical CalSites SPL/SCL) site	No	No
Identification as an ENVIROSTOR site	No	No
Identification as SLIC Site	No	Yes
Identification as solid waste landfill (SWLF)	No	No
Identification as HAZNET site	No	No
Identification as registered underground/aboveground storage tanks (UST/AST)	No	No
Identification as leaking underground storage tanks (LUST) site	No	Yes

Identification as a State DEED Restriction site	No	N/A
Identification as a State Voluntary Cleanup Program (VCP) site	No	No
Identification as Federal Land Use/Indian Lands of the U.S. sites	No	No
Identification as State/Tribal Brownfields site	No	No

The subject property was identified as a small quantity generator of hazardous waste. The west adjacent property was identified as a LUST, VCP, and ENVIROSTAR site. The south adjacent property was identified as a SLIC and LUST site. The north adjacent property was identified as a small quantity generator of hazardous waste and a LUST site. These listings are further discussed in Section 5.3.

5.2 Contaminant Migration

Migration of petroleum hydrocarbon or volatile organic compound (VOC) contamination is generally via groundwater. Therefore, only those contaminant release sites located hydrologically upgradient relative to the subject property are expected to represent a potential environmental concern to the subject property. Contaminated sites located hydrologically downgradient of the subject property are not expected to represent a potential threat to the groundwater quality beneath the subject property. Sites that are situated hydrologically cross-gradient relative to the subject property are not expected to represent a concern unless close proximity allows for the potential of lateral migration. As discussed in Section 2.3, groundwater in the vicinity of the subject property is assumed to flow to the north-northeast. Migration of VOC contaminants in the vapor phase have also been documented which have the potential to impact the subject property; however, evaluation of vapor phase migration and intrusion is beyond the scope of this assessment.

5.3 Record Details

National Priorities List (NPL) is EPA's national listing of contaminated sites targeted for cleanup because they pose a threat to human health and the environment. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) authorizes and requires the EPA to investigate, categorize, and enforce the cleanup of hazardous waste sites on the NPL. An NPL site on or near a particular property may threaten the environmental integrity of the property or affect its marketability.

No sites within a 1-mile radius of the subject property were identified during the NPL database search.

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No sites within a ½-mile radius of the subject property were identified during the Delisted NPL database search.

CERCLIS and CERCLIS/NFRAP List consists of sites that the EPA has investigated or is presently investigating for release or threatened release of hazardous substances, which may be subject to review in accordance with the terms and conditions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, also known as Superfund). Sites listed on the “No Further Remedial Action Planned” (NFRAP) database are sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund or NPL consideration.

Nine sites within a ½-mile radius of the subject property were identified during the CERCLIS/NFRAP database search. Eight of these sites are identified on the NFRAP database, indicating that no further remedial action is necessary at these sites. The remaining site is plotted as being located a distance in excess of 1/4-mile from the subject property in a cross-gradient position. Based on regulatory status, relative distance, and the presumed direction of groundwater flow, these sites are not considered to be an environmental concern.

Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Information from the RCRA database is divided into three categories: TSD, LG GEN and SM GEN. The TSD category is searched to a 1-mile radius and tracks facilities which treat, store and/or dispose of hazardous waste. LG GEN, or large generators, are facilities that generate more than 1000 kg of hazardous waste per month. SM GEN, or small generators, are facilities that generate between 100 and 1000 kg of hazardous waste per month. The LG-GEN and SM-GEN databases are searched up to a 1/8-mile radius from the subject property.

One site within a 1-mile radius of the subject property was identified during the RCRA-TSD database search.

- The All Metals DBA ECS Refinery site, located at 705 Reed Street, is located approximately 346 feet to the west-southwest (hydrologically cross-gradient) of the subject property. The site is listed as a TSD site with several violations on file that are limited to paperwork issues. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.

Forty-two sites within a 1/8-mile radius of the subject property were identified during the RCRA (LG-and SM-GEN) database search.

- The subject property, identified as the American Camper site located at 504 and 512 Mathew Street, was identified as a SM-GEN site with no violations on file. Based on the lack of a documented release and observations detailed in Section 6.1, this listing is not expected to represent a significant environmental concern.

- The California Paperboard site, located at 525 Mathew Street, is located on the north adjacent property. The site is located hydrologically downgradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the presumed direction of groundwater flow and factors discussed in the LUST segment of Section 5.3, this site is not expected to represent a significant environmental concern.

The storage, treatment, disposal and/or generation of hazardous materials at the remaining sites is not a significant environmental concern based on the lack of a documented release or factors discussed in prior segments of Section 5.3.

CORRACTS is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing “corrective action”. A “corrective action order” is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility’s boundary and can be required regardless of when the release occurred, even if it predates RCRA.

Two sites within a 1-mile radius of the subject property were identified during the CORRACTS database search.

- The All Metals DBA ECS Refinery site, located at 705 Reed Street, is located approximately 346 feet to the west-southwest (hydrologically cross-gradient) of the subject property. The site is listed as a Materials Recovery Facility and has been assigned a low corrective action priority. Based on the presumed direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern.

The remaining site is located in excess of ½-mile from the subject property in a cross-gradient position. Based on the distance from the subject property and the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

Federal Institutional Control (IC)/Engineering Control (EC) Registries consist of sites with institutional controls (administrative measures such as land use restrictions, deed restrictions and post remediation requirements intended to prevent exposure to contaminants remaining on site), and engineering controls (physical methods to create pathway elimination for regulated substances to enter environmental media or effect human health).

The subject property was not identified in the Federal IC/EC database search.

Emergency Response Notification Systems (ERNS) List is EPA’s database of emergency response actions.

The subject property was not identified during the ERNS database search.

Historical California Sites (CalSites) are provided by the California Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC) and include state equivalent NPL (SPL) and CERCLIS (SCL) sites. The CalSites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the CalSites database. The database is no longer updated by the state agency and has been replaced by EnviroStor.

One site within a 1-mile radius of the subject property were identified during the Historical CalSites database search.

This site is located in excess of ½-mile from the subject property in a downgradient position. Based on the distance from the subject property and the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

ENVIROSTOR is a database maintained by the DTSC Site Mitigation and Brownfields Reuse Program, which identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (NPL); States Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Fifteen sites within a 1-mile radius of the subject property were identified during the Envirostor database search.

- The Lombardo Diamond Core Drilling site, located at 585 Roberts Avenue, is located approximately 130 feet to the north (hydrologically down-gradient) of the subject property. Metal coating and galvanizing has historically occurred onsite. The SFRWQCB is currently performing remedial activities at the property. Based on the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The 600 Mathew Street site is located on the northernmost west adjacent property. The site is located hydrologically cross-gradient from the subject property. The site is currently enrolled in the Voluntary Cleanup Program, and is listed as a No Further Action site. Based on the presumed direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern. Refer to the VCP segment of this Section for more information concerning this site.

The remaining sites are located in excess of ¼-mile from the subject property in either cross- or downgradient positions. Based on the distance and presumed direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

SLIC sites are provided by the Regional Water Quality Control Board (RWQCB). This list includes sites that have recorded spills, leaks, investigations, and cleanups.

Eleven sites, within a ⅛-mile radius of the subject property were identified during the SLIC database search.

- The south adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the Spills, Leaks, Investigations, and Cleanups database. The site is located hydrologically upgradient from the subject property. The site was monitored by the San Francisco Regional Water Quality Control Board (SFRWQCB) and is listed as closed. This listing is in relation to onsite pentachlorophenol (PCP) contamination from a PCP aboveground storage tank located at the site. Beaver Lumber Company reportedly utilized a portion of the subject property during the 1970s and 1980s as a storage facility and shipping receiving area, in which a UST was utilized for refueling trucks (discussed above). The plume of PCP contamination appears to have reached the subject property. According to the SFRWQCB Geotracker website, two monitoring wells were installed on the subject property in order to determine if contamination was present. The most recent groundwater monitoring event prior to closure took place on July 28, 2005. During that event, MW-5, located on the southern boundary of the subject property, yielded non-detectable concentrations of PCP. MW-20S, also located along the southern boundary, yielded 11 milligrams per liter (mg/L) of PCP. The SFRWQCB determined that PCP levels had significantly attenuated and would continue to do so in the future, and the south adjacent property reached closure on March 9, 2006. Both of the wells located on the subject property were decommissioned in 2006. Based on this information and the nature of former subject property use, no further action or investigation appears to be warranted at this time. However, any proposed disturbance of the subsurface for construction or other purposes would require the implementation of engineering controls to protect the health and safety of workers involved with subsurface activities.
- The Lombardo Diamond Core Drilling site, located at 585 Roberts Avenue, is located approximately 130 feet to the north (hydrologically down-gradient) of the subject property. Metal coating and galvanizing has historically occurred onsite. The SFRWQCB is currently performing remedial activities at the property. Based on the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

The remaining sites are located in excess of ¼-mile from the subject property in either cross- or downgradient positions. Based on the distance and the presumed direction of groundwater flow, the remaining sites are not expected to represent a significant environmental concern.

Solid Waste Landfills (SWLF) is a database generated by the State of California Solid Waste Information System (SWIS), which includes active and inactive landfills and transfer stations within the state maintained by the California Integrated Waste Management Board.

One site within a ½-mile radius of the subject property was identified during the SWLF database search. This site is located in excess of ¼-mile from the subject property in a cross-gradient position. Based on the distance and the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

HAZNET Sites database consists of data that is extracted from the copies of hazardous waste manifests received each year by the DTSC.

The subject property was not identified in the HAZNET database.

Underground/Aboveground Storage Tanks (UST/AST) List is a comprehensive listing of registered underground and aboveground storage tanks located within the State of California.

Four sites within a ¼-mile radius of the subject property were identified during the UST/AST database search. None of these sites are located adjacent to the subject property. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

Leaking Underground Storage Tanks (LUST) List is a list produced by the Regional Water Quality Control Board (RWQCB) of known sites with current or former leaking underground storage tanks on the premises.

One-hundred and twenty-eight sites within a ½-mile radius of the subject property were identified during the LUST database search.

- The south adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified twice in the LUST database. The site is located hydrologically up-gradient from the subject property. The site received closure for both incidents on February 7, 2002, one of which took place in May 29, 1985. According to the SFRWQCB Geotracker website, the nearest monitoring well in relation to the onsite LUST incidents was MW-3, which is located approximately 300 feet to the south of the subject property. The most recent groundwater monitoring event before the site reached closure on February 28, 2002 yielded no concentrations of Total Petroleum Hydrocarbons for gas or diesel, Benzene, Toluene, Ethylbenzene, and Xylene (BTEX), Methyl tert-Butyl Ether (MTBE), and Total Oil and Gas. Based on these facts and the regulatory status, this site is not expected to represent a significant environmental concern.
- The California Paperboard site, located at 525 Mathew Street, is located on the north adjacent property. The site is listed twice. On January 8, 1991, a release of an unknown quantity of gasoline was reported. No information concerning the second listing was

listed. The site is currently undergoing pollution characterization for both incidents. Based on the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

- The Nelson Brothers Trucking site, located at 600 Mathew Street, is located on the west adjacent property. The site is located hydrologically cross-gradient from the subject property. The site is listed three times. On January 29, 1992, a release of an unknown quantity of gasoline was reported. This incident received case closure on December 22, 2000. No information concerning the second and third listings was listed, excluding a Case Closed status that was granted on December 22, 2000. Based on the regulatory status and the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The Intex Auto Parts site, located at 2290 De La Cruz Boulevard, is located approximately 274 feet to the east (hydrologically cross-gradient) of the subject property. On January 1, 1992, a release of an unknown quantity of gasoline was reported. Pollution characterization activities are currently ongoing. Based on the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The Jenic site, located at 448 Robert Avenue, is located approximately 44 feet to the north (hydrologically downgradient) of the subject property. The site is listed twice for the same release. On January 7, 1991, a release of an unknown quantity of gasoline was reported. Pollution Characterization is currently ongoing at the site. Based on the presumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

The remaining sites are located in excess of 1/8-mile from the subject property, have received Case Closed status, and/or are located in cross- or downgradient positions. Based on the regulatory status, the distance, and/or the presumed direction of the groundwater flow, these sites are not expected to represent a significant environmental concern.

State Deed Restriction (DEED) List is maintained by the DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) and Hazardous Waste Management Program (HWMP). The SMBRP list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. The HWMP has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

The subject property was not identified during the DEED database search.

State Voluntary Cleanup Program (VCP) Sites are incorporated in the DTSC SMBRPD database which identifies sites that have known contamination, or those properties undergoing voluntary investigation and/or cleanup and which are listed in the VCP program.

One site within a ½-mile radius of the subject property was identified during the State VCP database search.

- The 600 Mathew Street site is located on the west adjacent property. The site is located hydrologically cross-gradient from the subject property. The site reached closure on March 21, 2001. Based on the presumed direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern.

Federal Land Use/Indian Lands of the U.S. is a database of areas administered by the Bureau of Indian Affairs which include areas of 640 acres or more. Included in the database are Federally-administered lands within a reservation which may or may not be considered part of the reservation. Hazardous materials use/storage permits, LUSTs and USTs on Indian Lands may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Federal Land Use/Indian Lands Use database search.

State/Tribal Brownfields is a database of abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment. Various states do not have specific Brownfields programs, and thus the information may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Brownfields database search.

6.0 SITE INSPECTION AND RECONNAISSANCE

On May 18, 2007, a site reconnaissance of the subject property and adjacent properties was conducted by Neil Yodnane of AEI in order to obtain information indicating the likelihood of recognized environmental conditions at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-05 §8.4.2, 8.4.3 and 8.4.4.

The subject property is occupied by Premier Auto Body Shop, Complete RV Repair Shop, and the California Paper Storage Center. On-site operations consist of auto body work, motor home repair, paper roll storage, and office activities.

Hazardous Substances and/or Petroleum Products in Connection with Property Use

Although hazardous substances and petroleum products are associated with the current auto repair operations conducted on the subject property, no evidence of improper storage or handling of these materials was observed during the site reconnaissance. Additionally, no staining or evidence of a release was observed during the site reconnaissance, and the subject property is not listed for any spills or releases in connection with the use or handling of these materials. Based on this information and the observations made during the site reconnaissance the use of these materials on the subject property is not expected to represent a significant environmental concern.

The Premier Body Shop is equipped with a paint booth. The paint booth is used for painting vehicles onsite. Premier Body Shop utilizes small quantities of solvent-based paints onsite. No floor drains or conduits to the subsurface were observed in the vicinity of the paint booth and paint storage area. Due to the on-site observations, the current presence of the paint booth and paints on the subject property is not expected to represent a significant environmental concern.

AEI observed two (2) 55-gallon drums of used motor oil and two (2) 55-gallon drums of antifreeze onsite. The drums were provided with secondary containment. No stains or leaks were observed at the base of the drums. Based on these facts, the drums are not expected to represent a significant environmental concern.

Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Three pad-mounted transformers were observed on the subject property during the site inspection. The transformers are owned and operated by Pacific Gas & Electric, and based on the presumed date of installation, are PCB containing. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Premier Body Shop is equipped with two aboveground lifts. Each of the lifts is equipped with a container of hydraulic fluid totaling approximately ten gallons situated approximately four feet above the ground surface. No evidence of stains or leakage from the units was observed, and the lifts are therefore not expected to represent a significant environmental concern.

Drains, Sumps and Clarifiers

Two storm drains were observed in the parking area of the subject property. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

6.2 Non-ASTM Services

Building Components

In general, building components that are in good condition are not expected to represent a health and safety concern to the occupants of a property. Please refer to the table below for a general description of the building components observed during AEI's site inspection.

Observed Building Components

Material	Location	Condition
Drywall Systems	Throughout Office Areas	Good
Acoustical Ceiling Tiles	Throughout Office Areas	Good
Roofing Systems	Roof	Not Inspected

Building components were observed to be in good condition during AEI's site inspection.

Asbestos-Containing Building Materials

For buildings constructed prior to 1980, the Code of Federal Regulations (29 CFR 1926.1101) states that all thermal system insulation (boiler insulation, pipe lagging, and related materials) and surface materials must be designated as "presumed asbestos-containing material" (PACM) unless proven otherwise through sampling in accordance with the standards of the Asbestos Hazard Emergency Response Act.

Regardless of building construction date, the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) requires that an asbestos survey adhering to AHERA sampling protocol be performed prior to demolition or renovation activities that may disturb ACMs. This requirement is typically enforced by the local air pollution control or air quality management district, and specifies that all suspect asbestos-containing materials (ACMs) be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

In general, the following commonly-encountered building components are considered to be friable materials: acoustical plaster, fireproofing, drywall systems, ceiling tiles, wall and ceiling texturing, thermal systems insulation (TSI), various mastics, and roofing products. The following commonly-encountered building materials are considered to be non-friable: vinyl floor tile, sheet vinyl flooring, and asbestos-cement products.

Lead-Based Paint

Lead-based paint is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g by dry weight) or more of lead. Section 1017 of the Housing and Urban Development Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a lead-based paint hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is

deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a “hazard”, although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, Federally owned housing, and housing receiving Federal assistance are affected by this rule.

In buildings constructed after 1978, it is very unlikely that lead-based paint is present. Due to the age of the subject property building, there is a potential that lead-based paint is present. Both interior and exterior painted surfaces were observed to be in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time.

Local regulations may apply to lead-based paint in association with building renovation/demolition and worker/occupant protection. Actual material samples would need to be collected in order to determine if lead-based paint is present.

Radon

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this investigation. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, below the action level of 4.0 pCi/L set forth by the EPA.

Drinking Water Sources and Lead in Drinking Water

Santa Clara County supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were not detected and therefore are well within standards established by the EPA.

Mold/Indoor Air Quality Issues

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates

indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI Consultants observed interior areas of the subject building in order to identify the significant presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the Property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the Property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the Property.

Electrical or Mechanical Equipment Likely to Contain Fluids

Several pole-mounted and pad-mounted transformers were observed on the adjacent sites during the site inspection. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Railroad tracks are located adjacent to the west of the subject property. Railroad spurs represent environmental concerns due to the historical application of oils containing polychlorinated biphenyls (PCBs), herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. However, the railroad tracks located adjacent to the west of the subject property are surrounded by gravel. Based on the presence of gravel, the use of oils, arsenic, and herbicides associated with weed or pest control is expected to be minimal, and therefore does not represent a significant environmental concern.

Drains and Sumps

Several storm drains were observed in the parking areas of the adjacent properties. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

Wells

According to an *A-Zone Well Closure* report performed for the south adjacent property by Stellar Environmental Solutions, Inc. on March 24, 2006, one inactive monitoring well is located on the south adjacent property. AEI did not observe the monitoring well during the site visit. Monitoring wells have the potential to be a conduit to the subsurface. However, the monitoring well is located approximately 200 feet to the south of the subject property. Based on these facts, the adjacent monitoring well is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

Findings

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- According to an *Underground Storage Tank Removal Permit* issued by the Santa Clara Fire Department (SCFD), one (1) 10,000-gallon diesel fuel underground storage tank (UST) was removed from the subject property on November 4, 1986. The owner is listed as Beaver Lumber. Confirmation samples were taken from the tank excavation walls and floor, which were analyzed for Total Volatile Hydrocarbons (TVH). Concentrations of TVH were not detected, and it was determined by the SCFD that a release did not occur. Based on the result of the confirmation sampling, the historical presence of the UST is not expected to represent a significant environmental concern.
- The south adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the Spills, Leaks, Investigations, and Cleanups database. The site is located hydrologically upgradient from the subject property. The site was monitored by the San Francisco Regional Water Quality Control Board (SFRWQCB) and is listed as closed. This listing is in relation to onsite pentachlorophenol (PCP) contamination from a PCP aboveground storage tank located at the site. Beaver Lumber Company reportedly utilized a portion of the subject property during the 1970s and 1980s as a storage facility and shipping receiving area, in which a UST was utilized for refueling trucks (discussed above). The plume of PCP contamination appears to have reached the subject property. According to the SFRWQCB Geotracker website, two monitoring wells were installed on the subject property in order to determine if contamination was present. The most recent groundwater monitoring event prior to closure took place on July 28, 2005. During that event, MW-5, located on the southern boundary of the subject property, yielded non-detectable concentrations of PCP. MW-20S, also located along the southern boundary, yielded 11 milligrams per liter (mg/L) of PCP. The SFRWQCB determined that PCP levels had significantly attenuated and would

continue to do so in the future, and the south adjacent property reached closure on March 9, 2006. Both of the wells located on the subject property were decommissioned in 2006. Based on this information and the nature of former subject property use, no further action or investigation appears to be warranted at this time. However, any proposed disturbance of the subsurface for construction or other purposes would require the implementation of engineering controls to protect the health and safety of workers involved with subsurface activities.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. However, the entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 500-520 Mathew Street in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

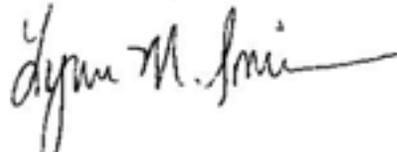

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40CFR Part 312.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DuPont Fabros Development LLC to conduct a Phase I Environmental Site Assessment (ESA), in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 535-555 Reed Street in the City of Santa Clara, Santa Clara County, California. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

Property Description

The subject property is located on the north side of Reed Street in a mixed commercial and industrial area of Santa Clara. The property totals approximately 6.9 acres and is improved with eight (8) one-story warehouse/storage buildings, one (1) one-story office building, and one (1) one-story equipment building totaling approximately 800,000 square feet. The buildings are vacant; excluding one warehouse building located on the eastern boundary of the property, which is utilized for vehicle parking by Avis Rental Cars. In addition to the subject property buildings, the property is improved with asphalt-paved parking areas. The property was developed with the office building, the equipment building, and three of the warehouses in the late 1940s. The five remaining warehouse buildings were constructed in phases in the late 1960s and early 1970s.

Based on a review of historical sources, the subject property was formerly developed with agricultural land since at least 1939 until the late 1940s. The site was occupied by the Pacific Redwood Casket Company from the late 1940s until approximately 1966 on the southern portion of the property. The site was occupied by Beaver Lumber from at least 1970 until the early 2000s. Several commercial/industrial tenants have additionally occupied the property, including Variety Merchandising in 1970, Sports Boats, Inc. in 1990, Renewed Truck and Trailer from at least 1989 until 1991, and Cope & McPhetres Marine in 1999. According to a previous Phase I ESA, the operations by these later tenants consisted of office activities, warehouse storage activities, truck and truck accessory sales, and boat sales. Environmental concerns associated with the historical occupancy of the property are further discussed below and in Sections 3.2.1, 4.2.6 and 5.3.

The immediately surrounding properties consist of a multi-tenant industrial building and AMI Recycling to the north; Harrington Industrial Plastics and three multi-tenant retail centers to the east; Reed Street followed by Enterprise Rental Cars and Akins Collision Center to the south; and a multi-tenant commercial building, a vacant industrial/commercial building, and Kapa Auto Supply Wholesaler to the west beyond railroad tracks.

Based upon groundwater monitoring data, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast and present at a depth of approximately five feet below ground surface (bgs).

Findings

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- The subject property was formerly developed with an aboveground Pentachlorophenol (PCP) tank. The tank was located on the north side of the former equipment repair building on the west side of the property. The PCP tank was utilized by Beaver Lumber Company from approximately 1965 until the late 1980s for the lumber treating process. Wood products were dipped into the tank and were hung over the tank for a few hours. The wood products were then placed on unpaved ground until they dried. During the removal of a nearby waste oil UST in 1985 (discussed in next paragraph), PCP was detected in a soil sample collected during installation of groundwater monitoring well MW-3 (subsequently referred to as MW-1). In the late 1980s, the PCP dipping tank was removed. From October 2000 until March 2006, several investigations and remedial actions took place on the subject property. These actions included the advancement of more than 30 soil borings, the installation of 18 additional wells (three remained from Leaking Underground Storage Tank Assessments, which are discussed below), excavation of the dipping tank source area along with off-site contaminated soil disposal, the application of Oxygen Release Compound™ (ORC™) into the excavation, stockpiled soil sampling from the excavation, white rot fungus treatment of the soil stockpile, cone penetrometer tests (CPTs), and the injection of Hydrocarbon Release Compound™ (HRC™) in barrier configurations along the plume of contamination. In June 2003, the source area excavation was backfilled with 40 percent of the soil stockpile (the portion meeting reuse criteria) and the remaining portion of the excavation was backfilled with imported clean fill. The soil stockpile that did not meet re-use criteria (60 percent) was transported to a non-hazardous landfill for disposal. According to the San Francisco Bay Regional Water Quality Board (SFBRWQB) Geotracker website, the site received closure for the PCP contamination on March 9, 2006. Based on the remedial activities performed onsite and the closure granted by the SFBRWQB, no further investigation in connection with the former PCP tank is required.

- The subject property was formerly developed with five underground storage tanks (USTs), including one 550-gallon waste oil UST, one 1,000-gallon gasoline UST, one 2,000-gallon gasoline UST, and two 10,000-gallon gasoline USTs. On February 20, 1992 and April 16, 1992, the USTs were removed. Confirmation samples were analyzed for Total Petroleum Hydrocarbons as gasoline and diesel (TPH-g and TPH-d), Benzene, Toluene, Ethylbenzene, and Xylene (BTEX), Total Oil and Grease (TOG), lead, and Halogenated Volatile Organic Compounds (HVOCs). TPH diesel and gasoline concentrations were found in two samples that were above action levels, and several other samples detected concentrations below action levels. HVOC concentrations were not detected. Concentrations of lead below action levels were detected in samples collected in the vicinity of the waste oil UST. A release was reported on the same date as the second removal. Beaver Lumber Company was identified as the responsible party. In addition, a 200-gallon waste oil UST was removed in 1985, in which sampling and removal procedures were not adequately documented. Due to the lack of sampling, the UST removed in 1985 was included in the 1992 release incident.

On March 31, 2000, five exploratory soil borings were drilled in the vicinity of the USTs and soil and groundwater samples were collected. TPH-g and TPH-d and MTBE were discovered in the soil samples, and elevated levels of benzene and TPH-g and TPH-d were found in one groundwater sample. Three monitoring wells (MW-1 through MW-3) were installed on the subject property in the vicinity of the former USTs in June 1992. In January 2001, six exploratory borings were conducted further downgradient from the UST area. Soil and groundwater samples were analyzed for TPH-g, TPH-d, MTBE, and BTEX. TPH and MTBE were detected in several borings. Benzene was detected in one sample.

In February 2001, several previously installed monitoring wells were sampled, which yielded concentrations of contaminants that appeared to be at lower levels than previous sampling events. According to a *Fuel Leak Site Case Closure Report* issued by the Santa Clara Valley Water District (SCVWD) on February 7, 2002, it was determined that onsite contaminant levels significantly attenuated since 1992, and that a majority of the remaining contamination appeared to be located in the vicinity of the former UST area located on the eastern portion of property. It was determined that all required corrective action activities have been performed onsite in relation to the 1992 UST removal and subsequent release. The SCVWD concluded that the remaining onsite contamination does not pose a threat to the regional groundwater, human health, or the environment and that no further action was necessary. Based on the regulatory status, no further investigation in connection with the former LUST case is required.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- On August 12, 1993, a 10,000-gallon UST was installed at the subject property. The UST consisted of a vaulted 10,000-gallon UST that contained one 4,000-gallon diesel fuel chamber and one 6,000-gallon gasoline chamber. The UST was double-walled and was constructed of fiberglass-reinforced plastic. On April 29, 2001, Alpha Geo Services (AGS)

removed the UST. The tank was cleaned onsite and was transported to a different Beaver Lumber Company site. After the removal, samples were taken from the walls and floors of the tank cavity and a water sample was taken from the tank pit. The samples were analyzed for TPH-d, TPH-g, BTEX, and MTBE. Concentrations of TPH-d were found in two samples, which were well below action limits. In addition, the water sample yielded concentrations of TPH-d that were well below action limits. The consultant concluded that no further investigations were necessary for the UST removal. The removal was documented and approved by the Santa Clara Fire Department on July 30, 2001, and the UST received closure. Based on the confirmation sampling results and the closure from the Santa Clara Fire Department, no further investigation in connection with the former UST is required.

- According to a *Documentation Report for Destruction of 10 A-Zone Monitoring Wells* issued by Stellar Environmental Solutions, Inc. (Stellar) on March 23, 2006, the SFRWCB granted closure to the site concerning the onsite PCP contamination on March 9, 2006. The SFRWCB requested that eleven (11) on-site monitoring wells be properly decommissioned. Stellar reported that it could not access one of the onsite monitoring wells, MW-16S, due to a large pile of construction debris being located on top of the well. However, Stellar properly decommissioned ten (10) remaining wells and included regulatory documentation in the appendices of their report. Based on the fact that the site has received closure for the PCP contamination, AEI recommends that MW-16S be decommissioned according to federal and local regulations.
- A large construction debris pile is located on top of the onsite monitoring well. AEI recommends that this pile be removed immediately in order for the monitoring well to be properly decommissioned. A second pile was observed just north of the larger debris pile on the property. The source of the debris is unknown. AEI also recommends that this material be properly disposed offsite in the event that it is related to the former excavation activities conducted on the property.
- A concrete wash pad is located on the southwestern section of the subject property. No stains, or pools of liquid were observed in the vicinity of the wash pad, and it is no longer in use. According to a *Phase I Environmental Site Assessment performed by E2C, Inc.* on September 18, 2000, stained surfaces and oily water was observed in the vicinity of the wash pad. Further investigation was warranted for the concrete wash pad at the time. According to a *Site Closure Report* submitted on May 31, 2001 to the Santa Clara Fire Department (SCFD), two soil borings were advanced in the vicinity of the concrete wash area. Samples were taken at 6 and 8 inches bgs. Samples were analyzed for Total Oil and Grease. Both samples yielded results that were below detection limits. No documentation concerning the closure response was available at the SCFD. However; based on the sampling results, the concrete wash pad is not expected to represent a significant environmental concern.
- Two automobile engines were observed on the southeastern portion of the subject property. The pavement below the engines was stained. AEI recommends that the engines be removed immediately in order to prevent a significant release of motor oil in to the subsurface.

- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 535-555 Reed Street in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time. However, AEI recommends that the abandoned vehicle engines be removed from the site, and that the remaining on-site groundwater monitoring well be accessed and properly decommissioned.

In addition, due to the presence of low levels of constituents of concern detected in the soil and groundwater on the property, any redevelopment activities should include health and safety plans to address potential worker contact with these areas. Engineering controls or higher construction costs may result from the low levels that remain in place.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 535-555 Reed Street in the City of Santa Clara, Santa Clara County, California (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I Environmental Site Assessment is to identify potential environmental liabilities associated with the presence of hazardous materials, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 Significant Assumptions

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. Except as set forth in this report, AEI Consultants has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. AEI Consultants assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes

the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 Limitations

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-05.

If requested by the client, these non-scope issues are discussed in Section 6.2. Otherwise, the purpose of this investigation is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-05 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-05.
- 2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
- 3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market

conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 Data Gap and Data Failure

According to ASTM E1527-05, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-05 “data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met”. Pursuant to ASTM Standards, historical sources are required to document property use back to the property’s first developed use or back to 1940, whichever is earlier.

The following data gaps were identified during the course of this investigation.

- On May 11, 2007, the Santa Clara County Environmental Health Department (SCCEHD) was contacted to review files on the subject property and nearby sites of concern. Due to the time constraints associated with this report, AEI was not able to obtain records from the SCCEHD. However, the Santa Clara Fire Department handles all records in relation to hazardous materials, and therefore, files concerning the subject property at the SCCEHD are not likely to provide any further information than what has been obtained.
- Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations, this data gap is not expected to significantly alter the overall findings of this investigation.

Due to time constraints, the client has requested that AEI issue this report despite the above-listed limitations.

1.5 Reliance

This investigation was prepared for the sole use and benefit of DuPont Fabros Development LLC. Neither this report, nor any of the information contained herein shall be used or relied upon for any purpose by any person or entity other than DuPont Fabros Development LLC.

2.0 SITE AND VICINITY DESCRIPTION

2.1 Site Location and Description

The subject property is located on the north side of Reed Street in a mixed commercial and industrial area of Santa Clara. The property totals approximately 6.9 acres and is improved with eight (8) one-story warehouse/storage buildings, one (1) one-story office building, and one (1) one-story equipment building totaling approximately 800,000 square feet. The buildings are vacant; excluding one warehouse building located on the eastern boundary of the property, which is utilized for vehicle parking by Avis Rental Cars. In addition to the subject property buildings, the property is improved with asphalt-paved parking areas. The property was developed with the office building, the equipment building, and three of the warehouses in the late 1940s. The five remaining warehouse buildings were constructed in phases in the late 1960s and early 1970s.

The subject property was identified in the regulatory database as a Leaking Underground Storage Tank (LUST) site, a California Facility Index Database (FID) UST site, a HAZNET waste manifest site, a Cortese Hazardous Waste and Substance Site, a Spills, Leaks, Investigations and Cleanups (SLIC) site, a Historical Underground Storage Tank (UST) site, a Historical LUST site, and a SWEEPS UST site.

The Assessor's Parcel Number (APN) for the subject property is 230-03-080. Heating and cooling systems on the subject property are fueled by natural gas and electricity provided by Pacific Gas & Electric, respectively. Potable water and sewage disposal are provided by municipal services.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 Site and Vicinity Characteristics

The subject property is located in a mixed commercial and industrial area of Santa Clara. The immediately surrounding properties consist of a multi-tenant industrial building and AMI Recycling to the north; Harrington Industrial Plastics and three multi-tenant retail centers to the east; Reed Street followed by Enterprise Rental Cars and Akins Collision Center to the south; and a multi-tenant commercial building, a vacant industrial/commercial building, and Kapa Auto Supply Wholesaler to the west beyond railroad tracks.

Two east adjacent properties, a north adjacent property, and a west adjacent property were identified as small quantity generators of hazardous waste. A west adjacent property was identified as an ENVIROSTOR and a LUST site. These listings are further discussed in Section 5.3.

2.3 Geology and Hydrogeology

According to information obtained from the US Geological Survey (USGS), the area surrounding the subject property is underlain by sedimentary deposits of the Cenozoic-era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Botella Series. According to subsurface investigations performed on the property, the soils underneath the subject property consist of silty and sandy clays up to a depth of 11 and ½ feet below ground surface (bgs), followed by clayey silt.

Based on a review of the USGS San Jose West, California Quadrangle Topographic Map, the subject property is situated approximately 53 feet above mean sea level, and the local topography is relatively flat. The nearest surface water is Coyote Creek, located approximately ¾-mile to the northeast. Based on groundwater monitoring data obtained from previous subsurface investigations performed at the subject property, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast and is expected to be encountered at 5 feet bgs.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Based on a review of historical sources, the subject property was formerly developed with agricultural land since at least 1939 until the late 1940s. The site was occupied by the Pacific Redwood Casket Company from the late 1940s until approximately 1966 on the southern portion of the property. The site was occupied by Beaver Lumber from at least 1970 until the early 2000s. Several commercial/industrial tenants have additionally occupied the property, including Variety Merchandising in 1970, Sports Boats, Inc. in 1990, Renewed Truck and Trailer from at least 1989 until 1991, and Cope & McPhetres Marine in 1999. According to a previous Phase I ESA, the operations by these later tenants consisted of office activities, warehouse storage activities, truck and truck accessory sales, and boat sales. Environmental concerns associated with the historical occupancy of the property are further discussed below and in Sections 3.2.1, 4.2.6 and 5.3.

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

3.1 Aerial Photograph Review

On May 14, 2007, AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Date: 1939 Scale: 1" = xxx' OR 1:xxxx	Date: 1982 Scale: 1" = xxx' OR 1:xxxx
Date: 1956 Scale: 1" = xxx' OR 1:xxxx	Date: 1993 Scale: 1" = xxx' OR 1:xxxx
Date: 1965 Scale: 1" = xxx' OR 1:xxxx	Date: 1999 Scale: 1" = xxx' OR 1:xxxx
Date: 1974 Scale: 1" = xxx' OR 1:xxxx	Date: 2005 Scale: Unknown

In the 1939 aerial photograph, the subject property and all of the adjacent properties appear to be agricultural land. Reed Street and the west adjacent railroad tracks appear to be developed.

In the 1956 aerial photograph, the subject property appears to be developed with five of the current structures that are located towards the southwestern portion of the property. The northern portion of the property and the north adjacent property appear to be agricultural land. The east adjacent property appears to be a storage area for the subject property tenant. The west and south adjacent properties appear to be developed with several industrial/commercial structures. No other significant changes were noted.

No significant changes were noted in the 1965 aerial photograph.

In the 1974 aerial photograph, the subject property and the east, south, and north adjacent properties are developed as they are today, with the exception of one current storage building located on the eastern section of the subject property. No other significant changes were noted.

In the 1982 aerial photograph, the previously discussed storage building appears developed on the subject property. No other significant changes were noted.

No significant changes were noted in the 1993 and 1999 aerial photographs.

In the 2005 aerial photograph, the west adjacent properties appear to be developed with the current commercial/industrial structures.

If available, high-quality copies of reviewed aerial photographs are included as Figure 3.

3.2 Regulatory Agencies

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested. Specifically AULs are comprised of engineering controls (EC) and institutional controls (IC).

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property. *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

3.2.1 Health Department

On May 11, 2007, the Santa Clara County Environmental Health Department (SCCEHD) was contacted to review files on the subject property and nearby sites of concern. Files at the

SCCEHD may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area. Due to the time constraints associated with this report, AEI was not able to obtain records from the SCCEHD. However, the Santa Clara Fire Department handles all records in relation to hazardous materials, and therefore, files concerning the subject property at the SCCEHD likely would not provide any further information than what has been obtained.

3.2.2 Fire Department

On May 18, 2007, the Santa Clara Fire Department (SCFD) was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

AEI was provided the following documentation:

Soil Sampling Below Underground Storage Tanks, Soil Tech Engineering (STE) (April 23, 1992)

STE conducted sampling after the removal of one 550-gallon waste oil UST, one 1,000-gallon gasoline UST, one 2,000-gallon gasoline UST, and two 10,000-gallon gasoline USTs. A total of nine samples were taken from the tank walls and cavities. Contaminated soil was observed during the removal activities. Samples were analyzed for TPH gasoline and diesel, Benzene, Toluene, Ethylbenzene, and Xylene (BTEX), Total Oil and Grease, lead, and Halogenated Volatile Organics. TPH diesel and gasoline concentrations were found in two samples that were above action levels, and several other samples detected concentrations below action levels. Concentrations of lead below action levels were detected in samples performed in the vicinity of the waste oil UST. STE recommended that further investigation be conducted and that a leaking tank incident be reported to the proper agencies. In addition, a 200-gallon waste oil UST was removed in 1985, in which sampling and removal procedures were not adequately documented. Due to these facts, the UST removed in 1985 was included in the 1992 release incident as a concern.

Underground Storage Tank Removal Permit, SCFD (March 3, 1993)

The permit is for the removal of one 550-gallon waste oil UST, one 1,000-gallon gasoline UST, one 2,000-gallon gasoline UST, and two 10,000-gallon gasoline USTs. All of the tanks were single-walled. No further information was provided. AEI presumes this permit is related to the tank removal activities detailed above.

Underground Storage Tank Unauthorized Release (Leak) Report, SCFD (March 9, 1993)

According to the document, three USTs were removed from the site on February 20, 1992 and two USTs were removed on April 16, 1992. Analysis for TPH gasoline and diesel revealed elevated concentrations that were indicative of a release. Beaver Lumber Company is addressed as the responsible party.

Underground Storage Tank Installation Permit, SCFD (August 12, 1993)

The permit is for the installation of one vaulted 10,000-gallon UST, that contains one 4,000-gallon diesel fuel chamber and one 6,000-gallon gasoline chamber.

Underground Storage Tank Permit, SCFD (September 23, 1994)

The document indicated that a permit issued for a 10,000-gallon split gasoline UST was to be renewed. The UST is listed as containing diesel fuel and gasoline in two 4,000 and 6,000-gallon separated chambers. The UST is double-walled and was constructed of fiberglass-reinforced plastic. Several renewal permits were additionally issued for this UST from 1994 until 2004.

UST Removal Report, Alpha Geo Services (AGS) and Enviro Soil Tech Consultants (ESTC) (May 14, 2001)

On April 29, 2001, AGS removed one 10,000-gallon split UST (vaulted 4,000-gallon diesel fuel and 6,000-gallon gasoline USTs). The tank was cleaned onsite and was transported to a different Beaver Lumber Company site. After the removal, samples were taken from the walls and floors of the tank cavity and a water sample was taken from the tank pit. The samples were analyzed for TPH diesel and gasoline, BTEX, and MTBE. Concentrations of TPH diesel were found in two samples, which were well below action limits. In addition, the water sample yielded concentrations of TPH diesel that were well below action limits. ESTC concluded that no further investigations were necessary for the UST removal.

Site Closure, ESTC (May 31, 2001)

In response to a request made by the SCFD, two samples were taken in the vicinity of the former maintenance building. Two borings were advanced on the southwestern corner of the building and in a concrete wash area. Samples were taken at 6 and 8 inches bgs. Samples were analyzed for Total Oil and Grease. Both samples yielded results that were below detection limits. ESTC concluded that the area is not a concern and that the site should reach full closure. No documentation concerning the closure was available at the SCFD.

Hazardous Waste Tank Closure Certification, SCFD (July 30, 2001)

The document indicates that two USTs (one vaulted UST with 4,000 and 6,000-gallon chambers) were removed from the subject property and that contamination was not discovered through confirmation samples. No further information was listed.

3.2.3 Building Department

On May 18, 2007, the Santa Clara Building Department (SCBD) was visited for information on the subject property in order to identify historical tenants and property use. Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

Year(s)	Owner/Applicant	Description of Permit / Building Use
1956	W.J. Nicholson	Construction Permit – Storage Building (535)
1958	Pacific Redwood Casket Company	Certificate of Occupancy (535)
1965	Beaver Lumber Company	Construction Permit – Industrial Building (555)
1966	Beaver Lumber Company	Construction Permit – Office Building (535)
1969	Beaver Lumber Company	Construction Permit – Shed (535)
1974	Beaver Lumber Company	Construction Permit – Industrial Warehouse (535)
1977	Beaver Lumber Company	Addition Permit – Warehouse Building (535)

In addition to the above-listed permits, over 100 permits were issued for minor remodeling/alteration work starting in the 1960s. Environmental concerns associated with the former tenants are further discussed in Sections 4.2.5 and 3.2.2.

3.2.4 Planning Department

On May 18, 2007, the Santa Clara County Planning Department (SCCPD) was contacted for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the SCCPD.

3.2.5 Department of Toxic Substances Control

On May 11, 2007, the Department of Toxic Substances Control (DTSC) was contacted was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the DTSC.

3.2.6 Regional Water Quality Control Board

On May 11, 2007, the San Francisco Regional Water Quality Control Board (SFRWQCB) was contacted was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

AEI received several documents from the SFRWQCB and from the client concerning the corrective action activities for the former PCP tank. The following documents were provided:

Adoption of Site Cleanup Requirements for Beaver Lumber Company Site, SFRWQCB (July 11, 2001)

The letter was issued in order to address the onsite contamination caused by a former Pentachlorophenol (PCP) tank. The PCP tank was located on the north side of the former equipment repair building on the west side of the property. The PCP tank was utilized by Beaver Lumber Company from approximately 1965 until the late 1980s for the lumber treating process. Wood products were dipped into the tank and were hung over the tank for a few hours. The wood products were then placed on unpaved ground until they dried. The report noted that PCP contaminants were discovered in samples taken in the vicinity of the former waste oil tank (removed, sampled, and closed in 1985) located on the south side (approximately 90 feet to the south of the PCP tank) of the equipment repair building. In October 2000, E2C Consultants reportedly collected soil and groundwater samples in the vicinity of the PCP tank. Soil in the area of concern contained concentrations of PCP up to 40 mg/l. Additional investigations performed in February through April of 2001 yielded groundwater concentrations up to 750 micrograms/Liter. Soil contamination was determined to be limited to a small, shallow area in the vicinity of the former PCP tank. Groundwater contamination was determined to have migrated approximately 250 to the north-northeast of the former tank. The vertical extent of the contamination was not yet defined. The SFRWQCB noted that the proper measures must be taken by the subject property owner in order to properly remediate the onsite contamination.

Year 2005 Groundwater Monitoring Documentation Report and Petition for Case Closure, Stellar (December 19, 2005)

The report documented the following activities concerning the PCP contamination:

In May 1985, PCP was detected in a soil sample collected during installation of groundwater monitoring well MW-3 (subsequently referred to as MW-1) associated with a former waste oil underground storage tank (UST). In the late 1980s, the PCP dipping tank was removed. In May 1991, PCP was detected in an exploratory borehole soil sample beneath a former waste oil UST and in a composite sample of surficial soil near the former dipping tank. In 1992, the waste oil UST was removed (Refer to Section 3.2.4). In September 2000, a Phase I Environmental Site Assessment was conducted, which included a recommendation to evaluate PCP contamination extent (Refer to Section 4.2.5).

From October 2000 until October 2001, several borings were advanced onsite, three monitoring wells were installed, and one previously installed monitoring well was sampled in order to address the PCP contamination issue. Two groundwater monitoring events occurred. In January 2002, the PCP dipping tank source area was excavated (and offsite disposal conducted), followed by confirmation soil and grab-groundwater sampling, then application of Oxygen Release Compound™ (ORC™) into the excavation as an interim remedial action. In January 2002, baseline sampling of the stockpiled soil began., followed by the implementation of white rot fungus treatment of the stockpile. Between February and March of 2002, two more groundwater sampling events took place, and post-ORC™ treatment grab-groundwater sampling in the PCP dipping tank source area excavation occurred.

In April 2002, Well MW-1 was decommissioned. In May 2002, groundwater monitoring wells MW-5, MW-6, and MW-7 were installed, and a cone penetrometer test (CPT) remediation

program (14 boreholes, 20 groundwater samples) was conducted. In June 2002-November 2002, groundwater sampling events No. 5-6 were conducted. In November 2002, soil stockpile sampling event No. 5 was conducted. From January 13 through 17, 2003, twelve site groundwater monitoring wells (MW-8-S through MW-19-S) were installed in the three water-bearing zones. From January 22 through 27, 2003, a corrective action program including the injection of Hydrocarbon Release Compound™ (HRC™) in a barrier configuration was conducted (SES, 2003a).

On January 30, 2003, the final soil stockpile sampling event was conducted. In April 2003, site well MW-20-S was installed on the north adjacent property, followed by groundwater sampling event No. 8. In June 2003, the source area excavation was backfilled with 40 percent of the soil stockpile (the portion meeting reuse criteria); remaining portion of the excavation backfilled with imported clean fill. The soil stockpile that did not meet re-use criteria (60 percent) was transported to a nonhazardous landfill for disposal. From January 2003-April 2004, groundwater sampling events No. 7-12 were conducted.

Figures and laboratory analysis concerning each sampling event, remedial activities, and detailing the contamination plume are located in Appendix C: References.

According to the SFRWQCB Geotracker website, the depth to groundwater is approximately 5 feet bgs, and flows in a north-northeasterly direction. The most recent groundwater monitoring report performed on July 28, 2005 indicated that PCP levels were between 0.99 and 13 mg/l in all wells tested. According to the Geotracker website, the site reportedly reached closure for the PCP contamination on March 9, 2006. Based on the remedial activities that took place onsite, and the closure granted, the no further investigation regarding the former PCP Tank is required. A closure letter was not obtained. However, the Geotracker website confirmed that the site is currently classified as “Case Closed.”

3.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resource’s collection of Sanborn Fire Insurance maps on May 14, 2007.

Sanborn maps were available and reviewed for the years 1961 and 1966.

In the 1961 map, the subject property is occupied by the Pacific Redwood Casket Company, which occupies the southern portion of the subject property. Six structures are developed onsite, including a casket manufacturing building, a lumber shed, a lumber storage building, a steam dry kiln building, a sawdust bin, and an unnamed warehouse structure. The northern and eastern sections of the property are undeveloped, but are utilized for lumber storage. The north and west adjacent properties are vacant land. The south and east adjacent properties are not depicted.

In the 1966 map, the subject property is additionally developed with another lumber storage building and two storage sheds. No other significant changes were noted.

3.4 City Directories

A search of historic city directories was conducted for the subject property at through Environmental Data Resources and the Santa Clara Public Library on May 18, 2007. Directories were available and reviewed for the years 1922, 1925, 1926, 1930, 1931, 1935, 1936, 1940, 1942, 1946, 1946, 1950, 1955, 1957, 1960, 1962, 1963, 1966, 1968, 1970, 1974, 1975, 1978, 1980, 1982, 1985, 1986, 1991, 1996, 2000, 2001 and 2006. The following table summarizes the results of the city directory search.

City Directory Search Results

Year(s)	Occupant Listed
1922-1955	Addresses Not Listed in Research Source
1957-1966	Pacific Redwood Casket Company (555), Remaining Address Not Listed in Research Source
1970-1974	Beaver Lumber (535), Variety Merchandising Company (555)
1975	Beaver Lumber, Wilson Wholesale Frames (535), Remaining Address Not Listed in Research Source
1978-1986	Beaver Lumber (535), Remaining Address Not Listed in Research Source
1991	Beaver Lumber (535), Sports Boats, Inc. (555)
1996	Beaver Lumber, Pacific Trench Safety Inc. (535), Remaining Address Not Listed in Research Source
2001-2006	Addresses Not Listed in Research Source

Environmental concerns associated with the former occupants of the property are further discussed in Sections 3.2.2, 3.2.6 and 4.2.5.

4.0 INTERVIEWS AND USER PROVIDED INFORMATION

4.1 Interviews

Pursuant to ASTM E1527-05, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

4.1.1 Interview with Owner

The subject property owner, Mr. Alan Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.2 Interview with Report User

The report user, DuPont Fabros Development, LLC, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.3 Interview with Key Site Manager

The key site manager, Mr. Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.4 Past Owners, Operators and Occupants

Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations, this data gap is not expected to significantly alter the overall findings of this investigation.

4.1.5 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

4.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. In addition, pursuant to ASTM E1527-05, the User completed the *ASTM User Questionnaire*. Please refer to Appendix C: References for a copy of the questionnaire.

4.2.1 Title Records/Environmental Liens/AULs

The User did not provide any title records, AULs or documentation indicating environmental liens encumbering the subject property or any information regarding previous uses or ownership of the subject property that indicated recognized environmental conditions.

4.2.2 Specialized Knowledge

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

4.2.3 Valuation Reduction for Environmental Issues

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

4.2.4 Commonly Known or Reasonably Ascertainable Information

The User did not inform AEI of any commonly known or reasonably ascertainable information about that the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

4.2.5 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by the Client during this investigation. A summary of this information follows:

Phase I Environmental Site Assessment, E2C, Inc. (September 18, 2000)

The report was performed for the subject property as well a north adjacent property. The report confirmed that the subject property was formerly developed agriculturally since at least 1939 until the late 1940s. The site was occupied by the Pacific Redwood Casket Company from the

late 1940s until approximately 1966 on the southern portion of the property. The site was occupied by Beaver Lumber since at least 1970 until the early 2000s. Several commercial/industrial tenants have additionally occupied the property, including Variety Merchandising in 1970, Sports Boats, Inc. in 1990, Renewed Truck and Trailer from at least 1989 until 1991, and Cope & McPhetres Marine in 1999. At the time of the report, the site was occupied by Beaver Lumber Company (535 Reed Street), True Blue Sales (555 Reed Street) and Intext Auto Parts (555 Reed Street). According to the report, Sports Boats, Inc., Renewed Truck and Trailer, and Cope & McPhetres Marine utilized one storage/warehouse building located on the eastern section of the property as well as the onsite office building. The operations consisted of office activities, warehouse storage activities, truck and truck accessory sales, and boat sales. Based on these facts, these former tenants weren't addressed as significant environmental concerns.

The report noted that six USTs were known to have existed onsite. Five of those USTs were removed from the site in 1992 and one waste oil UST was removed in 1986. The report mentions that a release was reported during the 1992 removal event for all six USTs, which is further discussed in Section 3.2.2. Three monitoring wells were installed in 1992 to further delineate the onsite contamination. TPH gasoline and diesel, and BTEX concentrations were detected. Another sampling event took place in 1997, and all analytes were below action limits. At the time of the report, the Santa Clara Valley Water District (SCVWD) requested that further sampling be conducted onsite to further delineate the onsite contamination.

A PCP aboveground tank was noted to have been developed on the north side of the equipment building. The PCP tank was utilized for the lumber treating process. Wood products were dipped into the tank and were hung over the tank for a few hours. The wood products were then placed on unpaved ground until they dried. E2C noted that previous sampling events performed on the subject property yielded the presence of low concentrations of PCP, and that a focused subsurface investigation should be performed in the vicinity of the tank.

The report noted that a concrete wash pad was located on the southwestern portion of the subject property. E2C observed stained surfaces and oily water in the vicinity of the wash pad. Further investigation was warranted for the concrete wash pad.

The property was developed with a 10,000-gallon split UST at the time of the report, which is further discussed in Section 3.2.2.

Three active monitoring wells, at least one inactive monitoring well, and several boring caps were observed onsite. E2C recommended that all inactive features be properly closed.

No other significant concerns were identified.

Fuel Leak Site Case Closure – Case No. 14-197, Santa Clara Valley Water District (February 7, 2002)

The letter indicates that all corrective action activities have been performed onsite in relation to the 1992 UST removal and subsequent release. The SCVWD requested that three monitoring

wells be properly closed. The document included a timeline of the corrective action activities that took place onsite. Activities that were not previously discussed in this Section or in Section 3.2.2 included:

On March 31, 2000, five exploratory soil borings were drilled and sampled in the vicinity of the USTs for soil and groundwater. TPH gas and diesel and MTBE were discovered in the soil samples, and elevated levels of benzene and TPH gas and diesel were found in one groundwater sample.

In January 2001, six exploratory borings were conducted further downgradient from the UST area. Soil and groundwater samples were analyzed for TPH gas and diesel, MTBE, and BTEX. TPH gas and diesel and MTBE were detected in several borings. Benzene was detected in one sample.

In February 2001, several previously installed monitoring wells were sampled, which yielded concentrations of contaminants that appeared to be at lower levels than previous sampling events.

The SCVWD concluded that contaminant levels have significantly attenuated, and that a majority of the remaining contamination appeared to be located in the vicinity of the former UST area located on the eastern portion of property. The SCVWD concluded that the onsite contamination does not pose a threat to the regional groundwater, human health, or the environment.

Figures displaying the locations of the former USTs and the samples are included in Appendix C: References. Based on the closure granted by the SCVWD, no further investigation in connection with the onsite LUST incident is required.

Documentation Report for Destruction of 10 A-Zone Monitoring Wells, Stellar Environmental Solutions, Inc. (Stellar) (March 23, 2006)

According to the report, the site has undergone remedial activities concerning the former PCP tank since 1985. The SFRWCB granted closure to the site on March 9, 2006, and requested that eleven (11) installed monitoring wells be properly decommissioned. Stellar reported that it could not access one of the onsite monitoring wells, MW-16S, due to a large pile of construction debris being located on top of the well. However, Stellar properly decommissioned ten (10) remaining wells and included regulatory documentation in the appendices of their report.

Based on the fact that the site has received a comprehensive NFR Letter indicating that no further remedial action is necessary at the site, AEI recommends that MW-16S be decommissioned according to federal and local regulations.

5.0 REVIEW OF REGULATORY AGENCY RECORDS

The following information was obtained through a search of electronically compiled federal, state, county, and city databases provided by Environmental Data Resources, Inc. (EDR). The database search includes regulatory agency lists of known or potential hazardous waste sites, landfills, hazardous waste generators, and disposal facilities in addition to sites under investigation. The information provided in this report was obtained from publicly available sources. The locations of the sites listed in this report are plotted with a geographic information system utilizing geocoding of site addresses. The accuracy of these locations is generally +/- 300 feet. AEI's field representative has attempted to confirm the locations of listings on or adjacent to the subject property. Refer to the radius map (Appendix B: Regulatory Database Review Report) for the locations of the sites in relation to the subject property.

5.1 Records Summary

DATABASE REVIEWED	SUBJECT PROPERTY	ADJACENT PROPERTY
Identification as National Priorities List (NPL) "Superfund" site	No	No
Identification as a Federal Delisted NPL site	No	No
Identification as CERCLIS and/or CERCLIS/NFRAP site	No	No
Identification as hazardous waste handler and/or generator (RCRA-TSD, LG-GEN and/or SM-GEN)	No	Yes
Identification as RCRA CORRACTS site	No	No
Identification in Federal Institutional Control/Engineering Control Registries	No	N/A
Identification as an Emergency Response Notification Systems (ERNS) site	No	N/A
Identification as Historical State (Historical CalSites SPL/SCL) site	No	No
Identification as an ENVIROSTOR site	No	Yes
Identification as SLIC Site	Yes	No
Identification as solid waste landfill (SWLF)	No	No
Identification as HAZNET site	Yes	No
Identification as registered underground/aboveground storage tanks (UST/AST)	No	No
Identification as leaking underground storage tanks (LUST) site	Yes	Yes

Identification as a State DEED Restriction site	No	N/A
Identification as a State Voluntary Cleanup Program (VCP) site	No	No
Identification as Federal Land Use/Indian Lands of the U.S. sites	No	No
Identification as State/Tribal Brownfields site	No	No
Cortese Hazardous Waste and Substance Sites	Yes	N/A
Historical Underground Storage Tanks (HIST UST) List	Yes	N/A
SWEEPS UST List	Yes	N/A
CA FID Facility Inventory Database UST	Yes	N/A

The subject property was identified as a LUST, HAZNET, Cortese, SLIC, Historical UST, Historical LUST, CA FID UST, and SWEEPS UST site. Two east adjacent properties, a north adjacent property, and a west adjacent property were identified as small quantity generators of hazardous waste. A west adjacent property was identified as an ENVIROSTOR and a LUST site. These listings are further discussed in Section 5.3.

5.2 Contaminant Migration

Migration of petroleum hydrocarbon or volatile organic compound (VOC) contamination is generally via groundwater. Therefore, only those contaminant release sites located hydrologically upgradient relative to the subject property are expected to represent a potential environmental concern to the subject property. Contaminated sites located hydrologically downgradient of the subject property are not expected to represent a potential threat to the groundwater quality beneath the subject property. Sites that are situated hydrologically cross-gradient relative to the subject property are not expected to represent a concern unless close proximity allows for the potential of lateral migration. As discussed in Section 2.3, groundwater in the vicinity of the subject property is assumed to flow to the north-northeast. Migration of VOC contaminants in the vapor phase have also been documented which have the potential to impact the subject property; however, evaluation of vapor phase migration and intrusion is beyond the scope of this assessment.

5.3 Record Details

National Priorities List (NPL) is EPA's national listing of contaminated sites targeted for cleanup because they pose a threat to human health and the environment. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) authorizes and requires the EPA to investigate, categorize, and enforce the cleanup of hazardous waste sites on the NPL. An NPL site on or near a particular property may threaten the environmental integrity of the property or affect its marketability.

No sites within a 1-mile radius of the subject property were identified during the NPL database search.

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No sites within a ½-mile radius of the subject property were identified during the Delisted NPL database search.

CERCLIS and CERCLIS/NFRAP List consists of sites that the EPA has investigated or is presently investigating for release or threatened release of hazardous substances, which may be subject to review in accordance with the terms and conditions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, also known as Superfund). Sites listed on the “No Further Remedial Action Planned” (NFRAP) database are sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund or NPL consideration.

Nine sites within a ½-mile radius of the subject property were identified during the CERCLIS/NFRAP database search. Eight of these sites are identified on the NFRAP database, indicating that no further remedial action is necessary at these sites. The remaining site is plotted as being located in excess of 1/4-mile from the subject property in a cross-gradient position. Based on regulatory status, relative distance, and the direction of groundwater flow, these sites are not considered to be an environmental concern.

Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Information from the RCRA database is divided into three categories: TSD, LG GEN and SM GEN. The TSD category is searched to a 1-mile radius and tracks facilities which treat, store and/or dispose of hazardous waste. LG GEN, or large generators, are facilities that generate more than 1000 kg of hazardous waste per month. SM GEN, or small generators, are facilities that generate between 100 and 1000 kg of hazardous waste per month. The LG-GEN and SM-GEN databases are searched up to a 1/8-mile radius from the subject property.

One site within a 1-mile radius of the subject property was identified during the RCRA-TSD database search.

- The All Metals DBA ECS Refinery site, located at 705 Reed Street, is located approximately 346 feet to the west-southwest (hydrologically cross-gradient) of the subject property. The site is listed as TSD site with several violations on file that are limited to paperwork issues. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.

Thirty-five sites within a 1/8-mile radius of the subject property were identified during the RCRA (LG-and SM-GEN) database search.

- The Akins Collision Center site, located at 530 Reed Street, is located on the easternmost south adjacent property. The site is located hydrologically upgradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.
- The America Camper site, located at 504 Matthew Street, is located on the westernmost north adjacent property. The site is located hydrologically downgradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.
- The Nashua Computer Products Corp site, located at 2070 De La Cruz Boulevard, is located on the southernmost east adjacent property. The site is located hydrologically cross-gradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.
- The SB Power Tool Company Corp site, located at 2130 De La Cruz Boulevard, is located on an east adjacent property. The site is located hydrologically cross-gradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.

The storage, treatment, disposal and/or generation of hazardous materials at the remaining sites is not a significant environmental concern based on the lack of a documented release or factors discussed in prior segments of Section 5.3.

CORRACTS is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing “corrective action”. A “corrective action order” is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility’s boundary and can be required regardless of when the release occurred, even if it predates RCRA.

Two sites within a 1-mile radius of the subject property were identified during the CORRACTS database search.

- The All Metals DBA ECS Refinery site, located at 705 Reed Street, is located approximately 346 feet to the west-southwest (hydrologically cross-gradient) of the subject property. The site is listed as a Materials Recovery Facility and has been assigned a low corrective action

priority. Based on the direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern.

The remaining site is located in excess of ½-mile from the subject property in a cross-gradient position. Based on the distance from the subject property and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

Federal Institutional Control (IC)/Engineering Control (EC) Registries consist of sites with institutional controls (administrative measures such as land use restrictions, deed restrictions and post remediation requirements intended to prevent exposure to contaminants remaining on site), and engineering controls (physical methods to create pathway elimination for regulated substances to enter environmental media or effect human health).

The subject property was not identified in the Federal IC/EC database search.

Emergency Response Notification Systems (ERNS) List is EPA's database of emergency response actions.

The subject property was not identified during the ERNS database search.

Historical California Sites (CalSites) are provided by the California Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC) and include state equivalent NPL (SPL) and CERCLIS (SCL) sites. The CalSites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the CalSites database. The database is no longer updated by the state agency and has been replaced by EnviroStor.

One site within a 1-mile radius of the subject property were identified during the Historical CalSites database search.

This site is located in excess of ½-mile from the subject property in a downgradient position. Based on the distance from the subject property and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

ENVIROSTOR is a database maintained by the DTSC Site Mitigation and Brownfields Reuse Program, which identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (NPL); States Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Fifteen sites within a 1-mile radius of the subject property were identified during the Envirostor database search.

- The Lombardo Diamond Core Drilling site, located at 585 Roberts Avenue, is located approximately 130 feet to the north (hydrologically down-gradient) of the subject property. Metal coating and galvanizing has historically occurred onsite. The SFRWQCB is currently overseeing remedial activities at the property. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The 600 Matthew Street site is located approximately 168 feet to the northwest of the subject property. The site is located hydrologically cross-gradient from the subject property. The site is currently enrolled in the Voluntary Cleanup Program, and is listed as a No Further Action site. Based on the direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern. Refer to the VCP segment of this Section for more information concerning this site.

The remaining sites are located in excess of ¼-mile from the subject property in either cross- or downgradient positions. Based on the distance and direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

SLIC sites are provided by the Regional Water Quality Control Board (RWQCB). This list includes sites that have recorded spills, leaks, investigations, and cleanups.

Eleven sites, including the subject property, within a ⅛-mile radius of the subject property were identified during the SLIC database search.

- The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the SLIC database. The site was monitored by the SFRWQCB and is listed as closed. This listing is in relation to onsite PCP contamination. No further information was provided. Refer to Sections 3.2.6 and 4.2.5 for more information concerning this listing.
- The Lombardo Diamond Core Drilling site, located at 585 Roberts Avenue, is located approximately 130 feet to the north (hydrologically down-gradient) of the subject property. Metal coating and galvanizing has historically occurred onsite. The SFRWQCB is currently overseeing remedial activities at the property. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

The remaining sites are located in excess of ¼-mile from the subject property in either cross- or downgradient positions. Based on the distance and the direction of groundwater flow, the remaining sites are not expected to represent a significant environmental concern.

Solid Waste Landfills (SWLF) is a database generated by the State of California Solid Waste Information System (SWIS), which includes active and inactive landfills and transfer stations within the state maintained by the California Integrated Waste Management Board.

One site within a ½-mile radius of the subject property was identified during the SWLF database search. This site is located in excess of ¼-mile from the subject property in a cross-gradient position. Based on the distance and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

HAZNET Sites database consists of data that is extracted from the copies of hazardous waste manifests received each year by the DTSC.

The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the HAZNET database. The former tenant is listed as having recycled approximately 0.25 tons of oil-containing wastes. No further information was provided. Based on the waste oil UST removal and closure discussed in Sections 3.2.4 and 4.2.5, this listing is not expected to represent a significant environmental concern.

Leaking Underground Storage Tanks (LUST) List is a list produced by the Regional Water Quality Control Board (RWQCB) of known sites with current or former leaking underground storage tanks on the premises.

One-hundred and twenty eight sites, including the subject property, within a ½-mile radius of the subject property were identified during the LUST database search.

- The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified twice in the LUST database. The site received closure for both incidents on February 7, 2002, one of which took place in May 29, 1985. No further information was provided. Refer to Sections 3.2.2, 3.2.6 and 4.2.5 for more information concerning this listing.
- The California Paperboard site, located at 525 Mathew Street, is located approximately 50 feet to the north (hydrologically down-gradient) of the subject property. The site is listed twice. On January 8, 1991, a release of an unknown quantity of gasoline was reported. No information concerning the second listing was listed. The site is currently undergoing pollution characterization for both incidents. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The Nelson Brothers Trucking site, located at 600 Mathew Street, is located on the northernmost west adjacent property. The site is located hydrologically cross-gradient from the subject property. The site is listed three times. On January 29, 1992, a release of an unknown quantity of gasoline was reported. This incident received case closure on December 22, 2000. No information concerning the second and third listings was listed, excluding a Case Closed status that was granted on December 22, 2000. Based on the regulatory status and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

- The Intex Auto Parts site, located at 2290 De La Cruz Boulevard, is located approximately 274 feet to the east (hydrologically cross-gradient) of the subject property. On January 1, 1992, a release of an unknown quantity of gasoline was reported. Pollution characterization activities are currently ongoing. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The Jenic site, located at 448 Robert Avenue, is located approximately 44 feet to the north (hydrologically downgradient) of the subject property. The site is listed twice for the same release. On January 7, 1991, a release of an unknown quantity of gasoline was reported. Pollution Characterization is currently ongoing at the site. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

The remaining sites are located in excess of 1/8-mile from the subject property, have received case closed status, and/or are located in cross- or downgradient positions. Based on the regulatory status, the distance, and/or the direction of the groundwater flow, these sites are not expected to represent a significant environmental concern.

State Deed Restriction (DEED) List is maintained by the DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) and Hazardous Waste Management Program (HWMP). The SMBRP list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. The HWMP has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

The subject property was not identified during the DEED database search.

State Voluntary Cleanup Program (VCP) Sites are incorporated in the DTSC SMBRPD database which identifies sites that have known contamination, or those properties undergoing voluntary investigation and/or cleanup and which are listed in the VCP program.

One site within a 1/2-mile radius of the subject property was identified during the State VCP database search.

- The 600 Matthew Street site is located approximately 168 feet to the northwest of the subject property. The site is located hydrologically cross-gradient from the subject property. The site reached closure on March 21, 2001. Based on the presumed direction of groundwater flow and the regulatory status, this site is not expected to represent a significant environmental concern.

Federal Land Use/Indian Lands of the U.S. is a database of areas administered by the Bureau of Indian Affairs which include areas of 640 acres or more. Included in the database are Federally-administered lands within a reservation which may or may not be considered part of the reservation. Hazardous materials use/storage permits, LUSTs and USTs on Indian Lands may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Federal Land Use/Indian Lands Use database search.

State/Tribal Brownfields is a database of abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment. Various states do not have specific Brownfields programs, and thus the information may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Brownfields database search.

Cortese Hazardous Waste and Substance Sites List is provided by the California EPA Office of Emergency Information. The sites listed in this database are designated by the SWRCB as LUST sites, Integrated Waste Board as SWF/LS sites, and DTSC as Cal Sites. This list is not longer updated by the State Agency.

The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the Cortese database. This listing is presumed to be a duplicate of the LUST listing. Refer to other segments of this Section for information concerning the site's status as a LUST site.

Historical Underground Storage Tanks (HIST UST) List is a comprehensive listing of registered underground and aboveground storage tanks located within the State of California.

The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the HIST UST Database. The site reportedly was developed with one 1,000-gallon gasoline UST, one 10,000-gallon diesel fuel UST, and one 1,000-gallon diesel fuel UST. In addition, the site was developed with one 5,000-gallon "product" tank (assumably the PCP tank), installed in 1969, and one 200-gallon waste oil UST, installed in 1974. Refer to Section 3.2.4 regarding the former USTs at the subject property.

SWEEPS UST List is a comprehensive listing of registered underground storage tanks located within the State of California.

The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the SWEEPS UST Database. The site reportedly was developed with one 4,000-gallon diesel fuel UST and one 6,000-gallon gasoline UST. Refer to Section 3.2.4 concerning the former onsite vaulted UST.

CA FID UST Facility Inventory Database contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board.

The subject property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the CA FID UST Database. No information regarding the listing was listed. Refer to Section 3.2.4 and other segments of this Section for more information concerning the former USTs at the subject property.

Underground/Aboveground Storage Tanks (UST/AST) List is a comprehensive listing of registered underground and aboveground storage tanks located within the State of California.

Four sites within a ¼-mile radius of the subject property were identified during the UST/AST database search. None of these sites are located on or adjacent to the subject property. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

6.0 SITE INSPECTION AND RECONNAISSANCE

On May 18, 2007, a site reconnaissance of the subject property and adjacent properties was conducted by Neil Yodnane of AEI in order to obtain information indicating the likelihood of recognized environmental conditions at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-05 §8.4.2, 8.4.3 and 8.4.4.

6.1 On-Site Observations

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Waste Water Discharges
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wells
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Septic Systems
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Other

The subject property is vacant; excluding one warehouse building located on the eastern boundary of the property, which is occupied by Avis Rental Cars. Onsite operations consist of vehicle storage.

Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Several pole-mounted and/or pad-mounted transformers were observed on the subject property during the site inspection. The transformers are owned and operated by Pacific Gas & Electric, and based on the presumed date of installation, may be PCB containing. According to PG&E, 99% of transformers in the PG&E service area have been replaced with non-PCB containing units; however, sampling of the fluid within the transformers would be required to rule out the presence of PCBs. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Stained Soil or Pavement

Two automobile engines were observed on the southeastern portion of the subject property. The pavement below the engines was stained. AEI recommends that the engines be removed immediately in order to prevent a significant release of motor oil in to the subsurface.

Wells

According to an *A-Zone Well Closure* report performed for the subject property by Stellar Environmental Solutions, Inc. on March 24, 2006, one inactive monitoring well is located on the property on the north side of the equipment repair building. AEI did not observe the monitoring well during the site visit, as it was covered with a large pile of construction debris. As mentioned in Section 4.2.5, AEI recommends that the monitoring well be decommissioned in accordance with all federal and state regulations.

Other

A concrete wash pad is located on the southwestern section of the subject property. No stains, or pools of liquid were observed in the vicinity of the wash pad nad it is no longer in use. According to a *Phase I Environmental Site Assessment performed by E2C, Inc.* on September 18, 2000, stained surfaces and oily water was observed in the vicinity of the wash pad. Further investigation was warranted for the concrete wash pad at the time. According to a *Site Closure Report* submitted by ESTC on May 31, 2001 to the Santa Clara Fire Department, two soil borings were advanced in the vicinity of the concrete wash area. Samples were taken at 6 and 8 inches bgs. Samples were analyzed for Total Oil and Grease. Both samples yielded results that were below detection limits. Based on the sampling results, the concrete wash pad is not expected to represent a significant environmental concern.

A large construction debris pile is located on top of the onsite monitoring well. AEI recommends that this pile be removed immediately in order for the monitoring well to be properly decommissioned. A second pile was observed just north of the larger debris pile on the

property. The source of the debris is unknown. AEI also recommends that this material be properly disposed offsite in the event that it is related to the former excavation activities conducted on the property.

6.2 Non-ASTM Services

Building Components

In general, building components that are in good condition are not expected to represent a health and safety concern to the occupants of a property. Please refer to the table below for a general description of the building components observed during AEI's site inspection.

Observed Building Components

Material	Location	Condition
Drywall Systems	Throughout Office Building	Good
Acoustical Ceiling Tiles	Throughout Office Building	Good
Roofing Systems	Roof	Fair

Building components were observed to be in good to fair condition during AEI's site inspection.

Asbestos-Containing Building Materials

For buildings constructed prior to 1980, the Code of Federal Regulations (29 CFR 1926.1101) states that all thermal system insulation (boiler insulation, pipe lagging, and related materials) and surface materials must be designated as "presumed asbestos-containing material" (PACM) unless proven otherwise through sampling in accordance with the standards of the Asbestos Hazard Emergency Response Act.

Regardless of building construction date, the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) requires that an asbestos survey adhering to AHERA sampling protocol be performed prior to demolition or renovation activities that may disturb ACMs. This requirement is typically enforced by the local air pollution control or air quality management district, and specifies that all suspect asbestos-containing materials (ACMs) be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

In general, the following commonly-encountered building components are considered to be friable materials: acoustical plaster, fireproofing, drywall systems, ceiling tiles, wall and ceiling texturing, thermal systems insulation (TSI), various mastics, and roofing products. The following commonly-encountered building materials are considered to be non-friable: vinyl floor tile, sheet vinyl flooring, and asbestos-cement products.

Lead-Based Paint

Lead-based paint is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g by dry weight) or more of lead. Section 1017 of the Housing and Urban Development Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a lead-based paint hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is

deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a “hazard”, although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, Federally owned housing, and housing receiving Federal assistance are affected by this rule.

In buildings constructed after 1978, it is very unlikely that lead-based paint is present. Due to the age of the subject property buildings, there is a potential that lead-based paint is present. Both interior and exterior painted surfaces were observed to be in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time.

Local regulations may apply to lead-based paint in association with building renovation/demolition and worker/occupant protection. Actual material samples would need to be collected in order to determine if lead-based paint is present.

Radon

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this investigation. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, below the action level of 4.0 pCi/L set forth by the EPA.

Drinking Water Sources and Lead in Drinking Water

Santa Clara County supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were not detected and therefore are well within standards established by the EPA.

Mold/Indoor Air Quality Issues

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates

indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI Consultants observed interior areas of the subject buildings in order to identify the significant presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the Property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the Property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the Property.

Electrical or Mechanical Equipment Likely to Contain Fluids

Several pole-mounted and pad-mounted transformers were observed on the adjacent sites during the site inspection. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Railroad tracks are located adjacent to the west of the subject property. Railroad spurs represent environmental concerns due to the historical application of oils containing polychlorinated biphenyls (PCBs), herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. The railroad tracks located adjacent to the west of the subject property are surrounded by gravel. Based on the presence of gravel, the use of oils, arsenic, and herbicides associated with weed or pest control is expected to be minimal, and therefore does not represent a significant environmental concern.

Drains and Sumps

Several storm drains were observed in the parking areas of the adjacent properties. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on

the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

Findings

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- The subject property was formerly developed with an aboveground Pentachlorophenol (PCP) tank. The tank was located on the north side of the former equipment repair building on the west side of the property. The PCP tank was utilized by Beaver Lumber Company from approximately 1965 until the late 1980s for the lumber treating process. Wood products were dipped into the tank and were hung over the tank for a few hours. The wood products were then placed on unpaved ground until they dried. During the removal of a nearby waste oil UST in 1985 (discussed in next paragraph), PCP was detected in a soil sample collected during installation of groundwater monitoring well MW-3 (subsequently referred to as MW-1). In the late 1980s, the PCP dipping tank was removed. From October 2000 until March 2006, several investigations and remedial actions took place on the subject property. These actions included the advancement of more than 30 soil borings, the installation of 18 additional wells (three remained from Leaking Underground Storage Tank Assessments, which are discussed below), excavation of the dipping tank source area along with off-site contaminated soil disposal, the application of Oxygen Release Compound™ (ORC™) into the excavation, stockpiled soil sampling from the excavation, white rot fungus treatment of the soil stockpile, cone penetrometer tests (CPTs), and the injection of Hydrocarbon Release Compound™ (HRC™) in barrier configurations along the plume of contamination. In June 2003, the source area excavation was backfilled with 40 percent of the soil stockpile (the portion meeting reuse criteria) and the remaining portion of the excavation was backfilled with imported clean fill. The soil stockpile that did not meet re-use criteria (60 percent) was transported to a non-hazardous landfill for disposal. According to the San Francisco Bay Regional Water Quality Board (SFBRWQB) Geotracker website, the site received closure for the PCP contamination on March 9, 2006. Based on the remedial activities performed

onsite and the closure granted by the SFBRWQB, no further investigation in connection with the former PCP tank is required.

- The subject property was formerly developed with five underground storage tanks (USTs), including one 550-gallon waste oil UST, one 1,000-gallon gasoline UST, one 2,000-gallon gasoline UST, and two 10,000-gallon gasoline USTs. On February 20, 1992 and April 16, 1992, the USTs were removed. Confirmation samples were analyzed for Total Petroleum Hydrocarbons as gasoline and diesel (TPH-g and TPH-d), Benzene, Toluene, Ethylbenzene, and Xylene (BTEX), Total Oil and Grease (TOG), lead, and Halogenated Volatile Organic Compounds (HVOCs). TPH diesel and gasoline concentrations were found in two samples that were above action levels, and several other samples detected concentrations below action levels. HVOC concentrations were not detected. Concentrations of lead below action levels were detected in samples collected in the vicinity of the waste oil UST. A release was reported on the same date as the second removal. Beaver Lumber Company was identified as the responsible party. In addition, a 200-gallon waste oil UST was removed in 1985, in which sampling and removal procedures were not adequately documented. Due to the lack of sampling, the UST removed in 1985 was included in the 1992 release incident.

On March 31, 2000, five exploratory soil borings were drilled in the vicinity of the USTs and soil and groundwater samples were collected. TPH-g and TPH-d and MTBE were discovered in the soil samples, and elevated levels of benzene and TPH-g and TPH-d were found in one groundwater sample. Three monitoring wells (MW-1 through MW-3) were installed on the subject property in the vicinity of the former USTs in June 1992. In January 2001, six exploratory borings were conducted further downgradient from the UST area. Soil and groundwater samples were analyzed for TPH-g, TPH-d, MTBE, and BTEX. TPH and MTBE were detected in several borings. Benzene was detected in one sample.

In February 2001, several previously installed monitoring wells were sampled, which yielded concentrations of contaminants that appeared to be at lower levels than previous sampling events. According to a *Fuel Leak Site Case Closure Report* issued by the Santa Clara Valley Water District (SCVWD) on February 7, 2002, it was determined that onsite contaminant levels significantly attenuated since 1992, and that a majority of the remaining contamination appeared to be located in the vicinity of the former UST area located on the eastern portion of property. It was determined that all required corrective action activities have been performed onsite in relation to the 1992 UST removal and subsequent release. The SCVWD concluded that the remaining onsite contamination does not pose a threat to the regional groundwater, human health, or the environment and that no further action was necessary. Based on the regulatory status, no further investigation in connection with the former LUST case is required.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- On August 12, 1993, a 10,000-gallon UST was installed at the subject property. The UST consisted of a vaulted 10,000-gallon UST that contained one 4,000-gallon diesel fuel chamber and one 6,000-gallon gasoline chamber. The UST was double-walled and was constructed of fiberglass-reinforced plastic. On April 29, 2001, Alpha Geo Services (AGS) removed the UST. The tank was cleaned onsite and was transported to a different Beaver Lumber Company site. After the removal, samples were taken from the walls and floors of the tank cavity and a water sample was taken from the tank pit. The samples were analyzed for TPH-d, TPH-g, BTEX, and MTBE. Concentrations of TPH-d were found in two samples, which were well below action limits. In addition, the water sample yielded concentrations of TPH-d that were well below action limits. The consultant concluded that no further investigations were necessary for the UST removal. The removal was documented and approved by the Santa Clara Fire Department on July 30, 2001, and the UST received closure. Based on the confirmation sampling results and the closure from the Santa Clara Fire Department, no further investigation in connection with the former UST is required.
- According to a *Documentation Report for Destruction of 10 A-Zone Monitoring Wells* issued by Stellar Environmental Solutions, Inc. (Stellar) on March 23, 2006, the SFRWCB granted closure to the site concerning the onsite PCP contamination on March 9, 2006. The SFRWCB requested that eleven (11) on-site monitoring wells be properly decommissioned. Stellar reported that it could not access one of the onsite monitoring wells, MW-16S, due to a large pile of construction debris being located on top of the well. However, Stellar properly decommissioned ten (10) remaining wells and included regulatory documentation in the appendices of their report. Based on the fact that the site has received closure for the PCP contamination, AEI recommends that MW-16S be decommissioned according to federal and local regulations.
- A large construction debris pile is located on top of the onsite monitoring well. AEI recommends that this pile be removed immediately in order for the monitoring well to be properly decommissioned. A second pile was observed just north of the larger debris pile on the property. The source of the debris is unknown. AEI also recommends that this material be properly disposed offsite in the event that it is related to the former excavation activities conducted on the property.
- A concrete wash pad is located on the southwestern section of the subject property. No stains, or pools of liquid were observed in the vicinity of the wash pad, and it is no longer in use. According to a *Phase I Environmental Site Assessment performed by E2C, Inc.* on September 18, 2000, stained surfaces and oily water was observed in the vicinity of the wash pad. Further investigation was warranted for the concrete wash pad at the time. According to a *Site Closure Report* submitted on May 31, 2001 to the Santa Clara Fire Department (SCFD), two soil borings were advanced in the vicinity of the concrete wash area. Samples were taken at 6 and 8 inches bgs. Samples were analyzed for Total Oil and Grease. Both samples yielded results that were below detection limits. No documentation concerning the closure response was available at the SCFD. However; based on the sampling results, the concrete wash pad is not expected to represent a significant environmental concern.

- Two automobile engines were observed on the southeastern portion of the subject property. The pavement below the engines was stained. AEI recommends that the engines be removed immediately in order to prevent a significant release of motor oil in to the subsurface.
- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 535-555 Reed Street in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time. However, AEI recommends that the abandoned vehicle engines be removed from the site, and that the remaining on-site groundwater monitoring well be accessed and properly decommissioned.

In addition, due to the presence of low levels of constituents of concern detected in the soil and groundwater on the property, any redevelopment activities should include health and safety plans to address potential worker contact with these areas. Engineering controls or higher construction costs may result from the low levels that remain in place.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40CFR Part 312.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by DuPont Fabros Development LLC to conduct a Phase I Environmental Site Assessment (ESA), in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 2100-2160 De La Cruz Boulevard in the City of Santa Clara, Santa Clara County, California. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

Property Description

The subject property is located on the west side of De La Cruz Boulevard in a mixed commercial and industrial area of Santa Clara. The property totals approximately 1.15 acres and is improved with a one-story multi-tenant retail/commercial building totaling approximately 20,000 square feet. The building is currently occupied by Liberty Lighting, Faultline Express, Bosch Factory Service Center, and Cabinet and Bath, Inc. On-site operations include retail, office, and tool product maintenance activities. In addition to the subject property building, the property is improved with asphalt-paved parking areas and associated landscaping.

According to historical sources, the current subject property building was constructed in 1969 for use as a multi-tenant commercial/office facility. Prior to the construction of the building, the property was agricultural land from at least 1939 until approximately 1956. From at least 1956 until 1969, the subject property was utilized as a storage area for the west adjacent property, the Beaver Lumber Company. Since the building's construction, the subject property has been occupied by several commercial/light industrial tenants, including Do Kay Computer Products and Back Door Deli from 1980 until 1986, and Business by Design and Sunnyvale Printers from 1991-2001. The current tenants have occupied the site since at least 2006.

The immediately surrounding properties consist of Harrington Industrial Plastics to the north, De La Cruz Boulevard followed by two multi-tenant office/retail centers to the east, a multi-tenant office/retail center to the south, and a multi-tenant industrial/commercial building to the west.

Based upon groundwater monitoring data for the west adjacent property, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast, and present at a depth of 5 feet below ground surface (bgs).

Findings

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- No on-site historical recognized environmental conditions were identified during the course of this investigation.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- The subject property has been occupied by several commercial/light industrial tenants since at least 1980, including Do Kay Computer Products from 1980 until 1986, and Sunnyvale Printers from 1991-2001. According to Ms. Pam Robles of the SCFD, Do Kay Computer Products has no record of having handled any hazardous substances onsite. According to Ms. Robles, the former occupant of 2160 De La Cruz Boulevard, Sunnyvale Printers, had reported violations for mislabeling containers and paperwork issues. However, the hazardous waste generated onsite totaled less than 2 gallons. No record of a hazardous waste manifest was on file, and the tenant did not generate enough waste to be required to submit a Hazardous Waste Business Plan. In addition, no floor drains are located in the warehouse area and the 2160 unit was observed to be a small area (approximately 1,500 square feet). It is unlikely that large-scale printing operations utilizing chlorinated solvents occurred onsite. Based on this information, the former tenant, Sunnyvale Printers, is not expected to represent a significant environmental concern.
- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 2100-2160 De La Cruz Boulevard in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the

Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 2100-2160 De La Cruz Boulevard in the City of Santa Clara, Santa Clara County, California (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I Environmental Site Assessment is to identify potential environmental liabilities associated with the presence of hazardous materials, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 Significant Assumptions

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. Except as set forth in this report, AEI Consultants has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. AEI Consultants assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes

the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 Limitations

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-05.

If requested by the client, these non-scope issues are discussed in Section 6.2. Otherwise, the purpose of this investigation is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-05 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-05.
- 2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
- 3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market

conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 Data Gap and Data Failure

According to ASTM E1527-05, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-05 “data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met”. Pursuant to ASTM Standards, historical sources are required to document property use back to the property’s first developed use or back to 1940, whichever is earlier.

The following data gaps were identified during the course of this investigation.

- Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations for the west adjacent property, this data gap is not expected to significantly alter the overall findings of this investigation.

Due to time constraints, the client has requested that AEI issue this report despite the above-listed limitations.

1.5 Reliance

This investigation was prepared for the sole use and benefit of DuPont Fabros Development LLC. Neither this report, nor any of the information contained herein shall be used or relied upon for any purpose by any person or entity other than DuPont Fabros Development LLC.

2.0 SITE AND VICINITY DESCRIPTION

2.1 Site Location and Description

The subject property is located on the west side of De La Cruz Boulevard in a mixed commercial and industrial area of Santa Clara. The property totals approximately 1.15 acres and is improved with a one-story multi-tenant retail/commercial building totaling approximately 20,000 square feet. The building is currently occupied by Liberty Lighting, Faultline Express, Bosch Factory Service Center, and Cabinet and Bath, Inc. On-site operations include retail, office, and tool product maintenance activities. In addition to the subject property building, the property is improved with asphalt-paved parking areas and associated landscaping.

The subject property was identified in the regulatory database as a small quantity generator of hazardous waste, and is further discussed in Section 5.3.

The Assessor's Parcel Number (APN) for the subject property is 230-03-078. Heating and cooling systems on the subject property are fueled by natural gas and electricity provided by Pacific Gas & Electric, respectively. Potable water and sewage disposal are provided by municipal services.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 Site and Vicinity Characteristics

The subject property is located in a mixed commercial and industrial area of Santa Clara. The immediately surrounding properties consist of Harrington Industrial Plastics to the north, De La Cruz Boulevard followed by two multi-tenant office/retail centers to the east, a multi-tenant office/retail center to the south, and a multi-tenant industrial/commercial building to the west.

The south adjacent property was identified as a small-quantity generator of hazardous waste site. The west adjacent property was identified as a Spills, Leaks, Investigations, and Cleanups (SLIC) site, Historical Underground Storage Tanks (HIST UST) site, a Statewide Environmental Evaluation and Planning System (SWEEPS UST) site, California Facility Inventory Database UST (CA FID UST) site, a Leaking Underground Storage Tank (LUST) site, and a Historical LUST site. These listings are further discussed in Section 5.3.

2.3 Geology and Hydrogeology

According to information obtained from the US Geological Survey (USGS), the area surrounding the subject property is underlain by sedimentary deposits of the Cenozoic-era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Botella Series. According to subsurface investigations performed on the west adjacent property, the soils in the vicinity consist of silty and sandy clays to a depth of 11 and ½ feet below ground surface (bgs), followed by clayey silt.

Based on a review of the USGS San Jose West, California Quadrangle Topographic Map, the subject property is situated approximately 52 feet above mean sea level, and the local topography is relatively flat. The nearest surface water is Coyote Creek, located approximately 3/4-mile to the northeast. Based upon groundwater monitoring data from the west adjacent property, the direction of groundwater flow beneath the subject property is inferred to be to the north-northeast. Based on groundwater monitoring data obtained from previous subsurface investigations performed at the west adjacent property, the depth to groundwater in the vicinity of the subject property is expected to be encountered at 5 feet bgs.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

According to historical sources, the current subject property building was constructed in 1969 for use as a multi-tenant commercial/office facility. Prior to the construction of the building, the property was agricultural land from at least 1939 until approximately 1956. From at least 1956 until 1969, the subject property was utilized as a storage area for the west adjacent property, the Beaver Lumber Company. Since the building's construction, the subject property has been occupied by several commercial/light industrial tenants, including Do Kay Computer Products and Back Door Deli from 1980 until 1986, and Business by Design and Sunnyvale Printers from 1991-2001. The current tenants have occupied the site since at least 2006.

The subject property has been occupied by several commercial/light industrial tenants since at least 1980, including Do Kay Computer Products from 1980 until 1986, and Sunnyvale Printers from 1991-2001. According Ms. Pam Robles of the SCFD, Do Kay Computer Products has no record of having handled any hazardous substances onsite. According to Ms. Robles, the former occupant of 2160 De La Cruz Boulevard, Sunnyvale Printers, had reported violations for mislabeling containers and paperwork issues. However, the hazardous waste generated onsite totaled less than 2 gallons. No record of a hazardous waste manifest was on file, and the tenant did not generate enough waste to be required to submit a Hazardous Waste Business Plan. In addition, no floor drains are located in the warehouse area and the 2160 unit was observed to be a small area (approximately 1,500 square feet). It is unlikely that large-scale printing operations utilizing chlorinated solvents occurred onsite. Based on this information, the former tenant, Sunnyvale Printers, is not expected to represent a significant environmental concern.

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

3.1 Aerial Photograph Review

On May 14, 2007, AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

Date: 1939
Scale: 1" = xxx' OR 1:xxxx

Date: 1982
Scale: 1" = xxx' OR 1:xxxx

Date: 1956
Scale: 1" = xxx' OR 1:xxxx

Date: 1993
Scale: 1" = xxx' OR 1:xxxx

Date: 1965
Scale: 1" = xxx' OR 1:xxxx

Date: 1999
Scale: 1" = xxx' OR 1:xxxx

Date: 1974
Scale: 1" = xxx' OR 1:xxxx

Date: 2005
Scale: Unknown

In the 1939 aerial photograph, the subject property and all of the adjacent properties appear to be agricultural land. De La Cruz Boulevard appears to be developed along the eastern boundary of the subject property.

In the 1956 aerial photograph, the subject property appears to be developed with a small dirt road, and a storage area, which appears to be part of the west adjacent industrial property. The stored items appear to be trailers, crates, and cars. The south and west adjacent properties appear to be developed with several industrial buildings, storage vessels, and small temporary structures. No other significant changes were noted.

In the 1965 aerial photograph, the subject property appears to be utilized as a storage area for the west adjacent industrial property with no structures onsite. The stored material appears to be trailers and crates.

In the 1974 aerial photograph, the subject property appears to be developed with the current multi-tenant commercial building. The north adjacent property appears to be developed with the building currently occupied by Harrington Industrial Plastics. The south adjacent property appears to be developed with the current multi-tenant commercial/retail center. The east adjacent properties appear to be developed with the current multi-tenant office/commercial buildings. No other significant changes were noted.

In the 1982 aerial photograph, the west adjacent property appears to be developed with the current industrial buildings. No other significant changes were noted.

No significant changes were noted in the 1993, 1999, and 2005 aerial photographs.

If available, high-quality copies of reviewed aerial photographs are included as Figure 3.

3.2 Regulatory Agencies

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested. Specifically AULs are comprised of engineering controls (EC) and institutional controls (IC).

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or

ground water on the property. *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

3.2.1 Health Department

On May 11, 2007, the Santa Clara County Environmental Health Department (SCCEHD) was contacted to review files on the subject property and nearby sites of concern. Files at the SCCEHD may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

Due to the time constraints associated with this report, AEI was not able to obtain records from the SCCEHD. However, based on the detailed information gathered from other historical sources, such as the aerial photographs and Water Quality Board records, the absence of this information is not expected to alter the findings of this investigation.

3.2.2 Fire Department

On May 18, 2007, the Santa Clara Fire Department (SCFD) was visited for information on the subject property to identify any evidence of previous or current hazardous material usage.

According to Ms. Pam Robles of the SCFD, Do Kay Computer Products has no record of having handled any hazardous substances onsite. According to Ms. Robles, the former occupant of 2160 De La Cruz Boulevard, Sunnyvale Printers, had reported violations for mislabeling containers and paperwork issues. However, the hazardous waste generated onsite totaled less than 2 gallons. No record of a hazardous waste manifest was on file, and the tenant did not generate enough waste to be required to submit a Hazardous Waste Business Plan. In addition, no floor drains are located in the warehouse area and the 2160 unit was observed to be a small area (approximately 1,500 square feet). It is unlikely that large-scale printing operations utilizing chlorinated solvents occurred onsite. Based on this information, the former tenant, Sunnyvale Printers, is not expected to represent a significant environmental concern.

3.2.3 Building Department

On May 18, 2007, the Santa Clara Building Department (SCBD) was visited for information on the subject property in order to identify historical tenants and property use.

Due to the large quantity of building permits reviewed (over 300 permits and certificates of occupancy listed), a listing of the specific building permits is not included in this report. Building permits that may indicate an environmental concern were not encountered during the

SCBD records review. However, AEI noted that an original construction permit for 1969 was on file. Furthermore, a Certificate of Occupancy was issued for Beaver Lumber Company in 1965. Based on the review of historical aerial photographs and the remedial documentation obtained for the west adjacent property (further discussed in Section 5.3), it does not appear that any heavy industrial operations took place onsite or that any underground storage tanks were ever installed onsite. Based on this information, the occupancy of the subject property by Beaver Lumber Company from 1965 until approximately 1969 is not expected to represent a significant environmental concern.

3.2.4 Planning Department

On May 18, 2007, the Santa Clara County Planning Department (SCCPD) was contacted for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the SCCPD.

3.2.5 Department of Toxic Substances Control

On May 11, 2007, the Department of Toxic Substances Control (DTSC) was contacted was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the DTSC.

3.2.6 Regional Water Quality Control Board

On May 11, 2007, the San Francisco Regional Water Quality Control Board (SFRWQCB) was contacted was contacted for information on the subject property to identify any evidence of previous or current hazardous material usage.

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the SFRWQCB.

3.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resource's collection of Sanborn Fire Insurance maps on May 11, 2007. Sanborn maps were available and reviewed for the years 1961 and 1966.

In the 1961 map, the subject property and the north and south adjacent properties are vacant. The west adjacent property is occupied by the Pacific Redwood Casket Company. Several

structures are developed on the west adjacent property, including a casket manufacturing building, a lumber shed, a lumber storage building, a steam dry kiln building, a sawdust bin, and an unnamed warehouse structure. The east adjacent properties are not depicted.

In the 1966 map, the subject property is utilized as a lumber storage area for the Beaver Lumber Company, who is the occupant of the west adjacent property. No other significant changes were noted. Environmental concerns associated with the west adjacent site are further discussed in Section 5.3.

3.4 City Directories

A search of historic city directories was conducted for the subject property through Environmental Data Resources and the Santa Clara Public Library on May 18, 2007. Directories were available and reviewed for the years 1922, 1925, 1926, 1930, 1931, 1935, 1936, 1940, 1942, 1946, 1946, 1950, 1955, 1957, 1960, 1962, 1963, 1966, 1968, 1970, 1974, 1975, 1978, 1980, 1982, 1985, 1986, 1991, 1996, 2000, 2001 and 2006. The following table summarizes the results of the city directory search.

City Directory Search Results

Year(s)	Occupant Listed
1922-1978	Addresses Not Listed in Research Source
1980-1986	Do Kay Computer Products (2100), Back Door Deli (2140), Remaining Addresses not Listed in Research Source
1991-2001	Business By Design (2100), Sunnyvale Printers (2160), Remaining Addresses not Listed in Research Source
2006	Liberty Lighting (2160), Faultline Express (2150), Bosch Factory Service Center (2120), and Cabinet and Bath, Inc. (2100), Remaining Addresses not Listed in Research Source

The subject property has been occupied by several commercial/light industrial tenants since at least 1980, including Do Kay Computer Products from 1980 until 1986, and Sunnyvale Printers from 1991-2001. Environmental concerns associated with these former businesses were previously discussed.

4.0 INTERVIEWS AND USER PROVIDED INFORMATION

4.1 Interviews

Pursuant to ASTM E1527-05, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

4.1.1 Interview with Owner

The subject property owner, Mr. Alan Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.2 Interview with Report User

The report user, DuPont Fabros Development LLC, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.3 Interview with Key Site Manager

The key site manager, Mr. Alan Ream, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

4.1.4 Past Owners, Operators and Occupants

Interviews with past owners and occupants regarding historical onsite operations were not reasonably ascertainable and therefore, this constitutes a data gap. However, based on information obtained from other sources including, historical aerial photographs and previous environmental investigations performed on the west adjacent property, this data gap is not expected to significantly alter the overall findings of this investigation.

4.1.5 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

4.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. In addition, pursuant to ASTM E1527-05, the User completed the *ASTM User Questionnaire*. Please refer to Appendix C: References for a copy of the questionnaire.

4.2.1 Title Records/Environmental Liens/AULs

The User did not provide any title records, AULs or documentation indicating environmental liens encumbering the subject property or any information regarding previous uses or ownership of the subject property that indicated recognized environmental conditions.

4.2.2 Specialized Knowledge

AEI was not informed by the User of any specialized knowledge or experience related to the subject property or nearby properties.

4.2.3 Valuation Reduction for Environmental Issues

The User did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

4.2.4 Commonly Known or Reasonably Ascertainable Information

The User did not inform AEI of any commonly known or reasonably ascertainable information about that the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

4.2.5 Previous Reports and Other Provided Documentation

No prior reports or relevant documentation in association with the subject property were made available to AEI during the course of this investigation.

5.0 REVIEW OF REGULATORY AGENCY RECORDS

The following information was obtained through a search of electronically compiled federal, state, county, and city databases provided by Environmental Data Resources, Inc. (EDR). The database search includes regulatory agency lists of known or potential hazardous waste sites, landfills, hazardous waste generators, and disposal facilities in addition to sites under investigation. The information provided in this report was obtained from publicly available sources. The locations of the sites listed in this report are plotted with a geographic information system utilizing geocoding of site addresses. The accuracy of these locations is generally +/- 300 feet. AEI's field representative has attempted to confirm the locations of listings on or adjacent to the subject property. Refer to the radius map (Appendix B: Regulatory Database Review Report) for the locations of the sites in relation to the subject property.

5.1 Records Summary

DATABASE REVIEWED	SUBJECT PROPERTY	ADJACENT PROPERTY
Identification as National Priorities List (NPL) "Superfund" site	No	No
Identification as a Federal Delisted NPL site	No	No
Identification as CERCLIS and/or CERCLIS/NFRAP site	No	No
Identification as hazardous waste handler and/or generator (RCRA-TSD, LG-GEN and/or SM-GEN)	YES	No
Identification as RCRA CORRACTS site	No	No
Identification in Federal Institutional Control/Engineering Control Registries	No	N/A
Identification as an Emergency Response Notification Systems (ERNS) site	No	N/A
Identification as Historical State (Historical CalSites SPL/SCL) site	No	No
Identification as an ENVIROSTOR site	No	No
Identification as SLIC Site	No	YES
Identification as solid waste landfill (SWLF)	No	No
Identification as HAZNET site	No	No
Identification as registered underground/aboveground storage tanks (UST/AST)	No	No

Identification as leaking underground storage tanks (LUST) site	No	YES
Identification as a State DEED Restriction site	No	N/A
Identification as a State Voluntary Cleanup Program (VCP) site	No	No
Identification as Federal Land Use/Indian Lands of the U.S. sites	No	No
Identification as State/Tribal Brownfields site	No	No
Historical Underground Storage Tanks (HIST UST) List	No	YES
Statewide Environmental Evaluation and Planning System (SWEEPS UST) List	No	YES
CA FID Facility Inventory Database UST	No	YES
Historical Leaking Underground Storage Tanks (HIST LUST) Santa Clara List	No	No

The subject property was identified during the regulatory database search as a RCRA SM-GEN site. The south adjacent property was identified as a SM-GEN site. The west adjacent property was identified as a SLIC, HIST UST site, SWEEPS UST site, CA FID UST site, a HIST LUST and LUST site. These listings are further discussed in Section 5.3.

5.2 Contaminant Migration

Migration of petroleum hydrocarbon or volatile organic compound (VOC) contamination is generally via groundwater. Therefore, only those contaminant release sites located hydrologically upgradient relative to the subject property are expected to represent a potential environmental concern to the subject property. Contaminated sites located hydrologically downgradient of the subject property are not expected to represent a potential threat to the groundwater quality beneath the subject property. Sites that are situated hydrologically cross-gradient relative to the subject property are not expected to represent a concern unless close proximity allows for the potential of lateral migration. As discussed in Section 2.3, groundwater in the vicinity of the subject property is assumed to flow to the north-northeast. Migration of VOC contaminants in the vapor phase have also been documented which have the potential to impact the subject property; however, evaluation of vapor phase migration and intrusion is beyond the scope of this assessment.

5.3 Record Details

National Priorities List (NPL) is EPA's national listing of contaminated sites targeted for cleanup because they pose a threat to human health and the environment. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) authorizes and requires the EPA to investigate, categorize, and enforce the cleanup of hazardous waste sites

on the NPL. An NPL site on or near a particular property may threaten the environmental integrity of the property or affect its marketability.

No sites within a 1-mile radius of the subject property were identified during the NPL database search.

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No sites within a ½-mile radius of the subject property were identified during the Delisted NPL database search.

CERCLIS and CERCLIS/NFRAP List consists of sites that the EPA has investigated or is presently investigating for release or threatened release of hazardous substances, which may be subject to review in accordance with the terms and conditions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, also known as Superfund). Sites listed on the “No Further Remedial Action Planned” (NFRAP) database are sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund or NPL consideration.

Four sites within a ½-mile radius of the subject property were identified during the CERCLIS/NFRAP database search. All of these sites are identified on the NFRAP database, indicating that no further remedial action is necessary at these sites. Based on regulatory status, these sites are not considered to be an environmental concern.

Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Information from the RCRA database is divided into three categories: TSD, LG GEN and SM GEN. The TSD category is searched to a 1-mile radius and tracks facilities which treat, store and/or dispose of hazardous waste. LG GEN, or large generators, are facilities that generate more than 1000 kg of hazardous waste per month. SM GEN, or small generators, are facilities that generate between 100 and 1000 kg of hazardous waste per month. The LG-GEN and SM-GEN databases are searched up to a ¼-mile radius from the subject property.

No sites within a 1-mile radius of the subject property were identified during the RCRA-TSD database search.

Nine sites, including the subject property, within a ¼-mile radius of the subject property were identified during the RCRA (LG-and SM-GEN) database search.

- The subject property, identified as the SB Power Tool Company Corp site located at 2130 De La Cruz Boulevard was identified. This unit is currently occupied by the Bosch Factory Service Center. The site is listed as a SM-GEN site with no violations on file. No further

information was available. Based on the lack of a documented release and the minor operations observed with the current tool maintenance tenant, this listing is not expected to represent a significant environmental concern. According Ms. Pam Robles of the SCFD, there are no records on file at the SCFD indicating that this former tenant handled hazardous substances onsite. Furthermore, no floor drains are located inside the subject property building. No evidence of a release was observed within the Bosch Factory Service Center unit, and hazardous materials currently utilized (discussed in Section 6.1) are not expected to represent a significant environmental concern. Based on this information, this listing is not expected to represent a significant environmental concern.

- The Nashua Computer Products Corp site, located at 2070 De La Cruz Boulevard, is located on the south adjacent property. The site is located hydrologically upgradient from the subject property. The site is listed as a SM-GEN site with no violations on file. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern

The storage, treatment, disposal and/or generation of hazardous materials at the remaining sites is not a significant environmental concern based on the lack of a documented release or factors discussed in prior segments of Section 5.3.

CORRACTS is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing “corrective action”. A “corrective action order” is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility’s boundary and can be required regardless of when the release occurred, even if it predates RCRA.

Two sites within a 1-mile radius of the subject property were identified during the CORRACTS database search. These sites are located in excess of ¼-mile from the subject property and have been assigned low corrective action priorities. Based on the distance and regulatory status, these sites are not expected to represent a significant environmental concern.

Federal Institutional Control (IC)/Engineering Control (EC) Registries consist of sites with institutional controls (administrative measures such as land use restrictions, deed restrictions and post remediation requirements intended to prevent exposure to contaminants remaining on site), and engineering controls (physical methods to create pathway elimination for regulated substances to enter environmental media or effect human health).

The subject property was not identified in the Federal IC/EC database search.

Emergency Response Notification Systems (ERNS) List is EPA’s database of emergency response actions.

The subject property was not identified during the ERNS database search.

Historical California Sites (CalSites) are provided by the California Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC) and include state equivalent NPL (SPL) and CERCLIS (SCL) sites. The CalSites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the CalSites database. The database is no longer updated by the state agency and has been replaced by EnviroStor.

One site within a 1-mile radius of the subject property was identified during the Historical CalSites database search. This site is located in excess of ½-mile from the subject property in a downgradient position. Based on the distance from the subject property and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

ENVIROSTOR is a database maintained by the DTSC Site Mitigation and Brownfields Reuse Program, which identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (NPL); States Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Thirteen sites within a 1-mile radius of the subject property were identified during the Envirostor database search. These sites are located in excess of ¼-mile from the subject property in either cross- or downgradient positions. Based on the distance and direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

SLIC sites are provided by the Regional Water Quality Control Board (RWQCB). This list includes sites that have recorded spills, leaks, investigations, and cleanups.

One site within a ⅛-mile radius of the subject property was identified during the SLIC database search.

- The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the SLIC database. The site is located hydrologically cross-gradient from the subject property. The site was monitored by the SFRWQCB and is listed as closed. This listing is in relation to onsite pentachlorophenol (PCP) contamination. According to the groundwater monitoring data obtained from the SFRWQCB Geotracker website, groundwater at the property flows to the north-northeast and is present at a depth of 5 bgs. The plume of PCP contamination is limited to the northwestern section of the site. According to the Geotracker website, the nearest monitoring well to the subject property, MW-10S, is located approximately 300 feet to the west of the subject property. The most recent groundwater monitoring event prior to closure took place on July 28, 2005, and MW-

10S yielded concentrations of 0.99 milligrams per liter (mg/L) for PCP, which is well below the State Action Level. Based on these facts, the direction of groundwater flow and regulatory status, this site is not expected to represent a significant environmental concern.

Solid Waste Landfills (SWLF) is a database generated by the State of California Solid Waste Information System (SWIS), which includes active and inactive landfills and transfer stations within the state maintained by the California Integrated Waste Management Board.

No sites within a ½-mile radius of the subject property were identified during the SWLF database search.

HAZNET Sites database consists of data that is extracted from the copies of hazardous waste manifests received each year by the DTSC.

The subject property was not identified during the HAZNET database search.

Underground/Aboveground Storage Tanks (UST/AST) List is a comprehensive listing of registered underground and aboveground storage tanks located within the State of California.

Two sites within a ¼-mile radius of the subject property were identified during the UST/AST database search. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

Leaking Underground Storage Tanks (LUST) List is a list produced by the Regional Water Quality Control Board (RWQCB) of known sites with current or former leaking underground storage tanks on the premises.

Eighty-two sites within a ½-mile radius of the subject property were identified during the LUST database search.

- The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified twice in the LUST database. The site is located hydrologically cross-gradient from the subject property. The site received closure for both incidents on February 7, 2002, one of which took place in May 29, 1985. According to the SFRWQCB Geotracker website, the nearest monitoring well in relation to the onsite LUST incidents is MW-3, which is located approximately 150 feet to the northwest of the subject property. The most recent groundwater monitoring event before the site reached closure on February 28, 2001 yielded no concentrations of Total Petroleum Hydrocarbons for gas or diesel, Benzene, Toluene, Ethylbenzene, and Xylene (BTEX), Methyl tert-Butyl Ether (MTBE), and Total Oil and Gas. Based on these facts, the regulatory status and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

- The Intex Auto Parts site, located at 2290 De La Cruz Boulevard, is located approximately 503 feet to the north (hydrologically downgradient) of the subject property. On January 1, 1992, a release of an unknown quantity of gasoline was reported. Pollution characterization activities are currently ongoing. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The California Paperboard site, located at 525 Mathew Street, is located approximately 586 feet to the north-northwest (hydrologically cross- to down-gradient) of the subject property. The site is listed twice. On January 8, 1991, a release of an unknown quantity of gasoline was reported. No information concerning the second listing was listed. The site is currently undergoing pollution characterization for both incidents. Based on the direction of groundwater flow, this site is not expected to represent a significant environmental concern.

The remaining sites are located in excess of 1/8-mile from the subject property, have received case closed status, and/or are located in cross- or downgradient positions. Based on the regulatory status, the distance, and/or the direction of the groundwater flow, these sites are not expected to represent a significant environmental concern.

State Deed Restriction (DEED) List is maintained by the DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) and Hazardous Waste Management Program (HWMP). The SMBRP list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. The HWMP has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

The subject property was not identified during the DEED database search.

State Voluntary Cleanup Program (VCP) Sites are incorporated in the DTSC SMBRPD database which identifies sites that have known contamination, or those properties undergoing voluntary investigation and/or cleanup and which are listed in the VCP program.

One site within a 1/2-mile radius of the subject property was identified during the State VCP database search. This site is located in excess of 1/4-mile from the subject property in a cross-gradient position. Based on the distance and direction groundwater flow, this site is not expected to represent a significant environmental concern.

Federal Land Use/Indian Lands of the U.S. is a database of areas administered by the Bureau of Indian Affairs which include areas of 640 acres or more. Included in the database are Federally-administered lands within a reservation which may or may not be considered part of

the reservation. Hazardous materials use/storage permits, LUSTs and USTs on Indian Lands may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Federal Land Use/Indian Lands Use database search.

State/Tribal Brownfields is a database of abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment. Various states do not have specific Brownfields programs, and thus the information may also be incorporated in the State database listings.

No sites within a ½-mile radius of the subject property were identified during the Brownfields database search.

Historical Underground Storage Tanks (HIST UST) List is a comprehensive listing of historical underground and aboveground storage tanks located within the State of California.

Nineteen sites within a ¼-mile radius of the subject property were identified during the HIST UST database search.

The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the HIST UST Database. The site reportedly was developed with one 1,000-gallon gasoline UST, one 10,000-gallon diesel fuel UST, one 1,000-gallon diesel fuel UST. In addition the site was developed with one 5,000-gallon “product” tank (assumingly the PCP tank), installed in 1969, and one 200-gallon waste oil UST, installed in 1974. Refer to the LUST segment of this Section for more information concerning this property.

The remaining sites are not located adjacent to the subject property. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

SWEEPS UST List is a comprehensive listing of registered underground storage tanks located within the State of California.

Eight sites within a ¼-mile radius of the subject property were identified during the SWEEPS UST database search.

The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the SWEEPS UST Database. The site reportedly was developed with one 4,000-gallon diesel fuel UST and one 6,000-gallon gasoline UST. Refer to the LUST segment of this Section for more information concerning this property. The remaining sites are not located adjacent to the subject property. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

CA FID UST Facility Inventory Database contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board.

Eight sites within a 1/4-mile radius of the subject property were identified during the CA FID UST database search.\

The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the CA FID UST Database. No information regarding the listing was listed. Refer to the LUST segment of this Section for more information concerning this property. The remaining sites are not located adjacent to the subject property. Due to the lack of a documented release or factors discussed in the LUST segment of Section 5.3, the storage of hazardous materials within registered tanks is not a significant environmental concern.

Historical Leaking Underground Storage Tanks (LUST) Santa Clara List is a list produced by the Regional Water Quality Control Board (RWQCB) of known sites with historical leaking underground storage tanks on the premises.

Forty sites within a 1/2-mile radius of the subject property were identified during the Historical Santa Clara LUST database search.

- The west adjacent property, identified as Beaver Lumber Company at 535 Reed Street, was identified in the HIST LUST database. The site is located hydrologically cross-gradient from the subject property. The site received closure on February 28, 2002. Based on the regulatory status and the direction of groundwater flow, this site is not expected to represent a significant environmental concern.
- The Intex Auto Parts site, located at 2290 De La Cruz Boulevard, is located approximately 503 feet to the north (hydrologically downgradient) of the subject property. The site is listed as active. No other information was provided. Refer to the LUST segment of this section for further information concerning this site.
- The California Paperboard site, located at 525 Mathew Street, is located approximately 586 feet to the north-northwest (hydrologically cross- to down-gradient) of the subject property. The site is listed twice. The site is listed as active. No other information was provided. Refer to the LUST segment of this section for further information concerning this site.

The remaining sites are located in excess of 1/8-mile from the subject property, have received case closed status, and/or are located in cross- or downgradient positions. Based on the regulatory status, the distance, and/or the direction of the groundwater flow, these sites are not expected to represent a significant environmental concern.

6.0 SITE INSPECTION AND RECONNAISSANCE

On May 18, 2007, a site reconnaissance of the subject property and adjacent properties was conducted by Neil Yodnane of AEI in order to obtain information indicating the likelihood of

recognized environmental conditions at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-05 §8.4.2, 8.4.3 and 8.4.4.

6.1 On-Site Observations

Identified		Observation
Yes	No	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Hazardous Substances and/or Petroleum Products in Connection with Property Use

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Other

The building is currently occupied by Liberty Lighting, Faultline Express, Bosch Factory Service Center, and Cabinet and Bath, Inc. On-site operations include retail, office, and tool product maintenance activities.

Hazardous Substances and/or Petroleum Products in Connection with Property Use

Potentially hazardous and harmful chemicals are used and stored onsite in the Bosch Factory Service Center and the maintenance areas of the building. Paints, small lubricant bottles, thinners, janitorial chemicals and cleaning supplies utilized onsite are kept in locked storage areas in quantities less than one gallon located in the warehouse portion of the unit. Based on the small quantities of these substances and good housekeeping, this is not expected to represent a significant environmental concern.

Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic polychlorinated biphenyls (PCBs) were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such

equipment: <50 ppm of PCBs is considered “Non-PCB”; between 50 and 500 ppm is considered “PCB-Contaminated”; and >500 ppm is considered “PCB-Containing”. Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

One pad-mounted transformer was observed on the subject property during the site inspection. The transformers are owned and operated by Pacific Gas & Electric, and based on the presumed date of installation, may be PCB containing. According to PG&E, 99% of transformers in the PG&E service area have been replaced with non-PCB containing units; however, sampling of the fluid within the transformers would be required to rule out the presence of PCBs. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Drains, Sumps and Clarifiers

Several storm drains were observed in the parking area of the subject property. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

6.2 Non-ASTM Services

Building Components

In general, building components that are in good condition are not expected to represent a health and safety concern to the occupants of a property. Please refer to the table below for a general description of the building components observed during AEI's site inspection.

Observed Building Components

Material	Location	Condition
Drywall Systems	Throughout	Good
Acoustical Ceiling Tiles	Throughout Retail Areas	Good
Roofing Systems	Roof	Not Inspected

Building components were observed to be in good condition during AEI's site inspection.

Asbestos-Containing Building Materials

For buildings constructed prior to 1980, the Code of Federal Regulations (29 CFR 1926.1101) states that all thermal system insulation (boiler insulation, pipe lagging, and related materials) and surface materials must be designated as "presumed asbestos-containing material" (PACM) unless proven otherwise through sampling in accordance with the standards of the Asbestos Hazard Emergency Response Act.

Regardless of building construction date, the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) requires that an asbestos survey adhering to AHERA sampling protocol be performed prior to demolition or renovation activities that may disturb ACMs. This requirement is typically enforced by the local air pollution control or air quality management district, and specifies that all suspect asbestos-containing materials (ACMs) be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

In general, the following commonly-encountered building components are considered to be friable materials: acoustical plaster, fireproofing, drywall systems, ceiling tiles, wall and ceiling texturing, thermal systems insulation (TSI), various mastics, and roofing products. The following commonly-encountered building materials are considered to be non-friable: vinyl floor tile, sheet vinyl flooring, and asbestos-cement products.

Lead-Based Paint

Lead-based paint is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g by dry weight) or more of lead. Section 1017 of the Housing and Urban Development Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a lead-based paint hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is

deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a “hazard”, although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, Federally owned housing, and housing receiving Federal assistance are affected by this rule.

In buildings constructed after 1978, it is very unlikely that lead-based paint is present. Due to the age of the subject property building, there is a potential that lead-based paint is present. Both interior and exterior painted surfaces were observed to be in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time.

Local regulations may apply to lead-based paint in association with building renovation/demolition and worker/occupant protection. Actual material samples would need to be collected in order to determine if lead-based paint is present.

Radon

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this investigation. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, below the action level of 4.0 pCi/L set forth by the EPA.

Drinking Water Sources and Lead in Drinking Water

Santa Clara County supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were not detected and therefore are well within standards established by the EPA.

Mold/Indoor Air Quality Issues

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates

indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI Consultants observed interior areas of the subject building in order to identify the significant presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the Property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the Property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the Property.

Electrical or Mechanical Equipment Likely to Contain Fluids

Several pole-mounted and pad-mounted transformers were observed on the adjacent sites during the site inspection. No spills, staining or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Drains and Sumps

Several storm drains were observed in the parking areas of the adjacent properties. No hazardous substances or petroleum products were noted in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

Wells

According to an *A-Zone Well Closure* report performed for the west adjacent property by Stellar Environmental Solutions, Inc. on March 24, 2006, one inactive monitoring well is located on the west adjacent property. AEI did not observe the monitoring well during the site visit. Monitoring wells have the potential to be a conduit to the subsurface. However, the monitoring well is located approximately 300 feet to the west and assessment of the west adjacent property

indicates that contamination is limited to its own boundaries. Based on these facts, the adjacent monitoring well is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

Recognized environmental conditions (RECs) are defined by the ASTM Standard Practice E1527-05 as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. AEI's investigation has revealed the following recognized environmental conditions associated with the subject property or nearby properties:

- No on-site recognized environmental conditions were identified during the course of this investigation.

Historical recognized environmental conditions (HRECs) are defined by the ASTM Standard Practice E1527-05 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. AEI's investigation has revealed the following historical recognized environmental conditions associated with the subject property or nearby properties:

- No on-site historical recognized environmental conditions were identified during the course of this investigation.

Environmental issues include environmental concerns identified by AEI that warrant discussion but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-05. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- The subject property has been occupied by several commercial/light industrial tenants since at least 1980, including Do Kay Computer Products from 1980 until 1986, and Sunnyvale Printers from 1991-2001. According Ms. Pam Robles of the SCFD, Do Kay Computer Products has no record of having handled any hazardous substances onsite. According to Ms. Robles, the former occupant of 2160 De La Cruz Boulevard, Sunnyvale Printers, had reported violations for mislabeling containers and paperwork issues. However, the hazardous waste generated onsite totaled less than 2 gallons. No record of a hazardous waste manifest was on file, and the tenant did not generate enough waste to be required to submit a Hazardous Waste Business Plan. In addition, no floor drains are located in the warehouse area and the 2160 unit was observed to be a small area (approximately 1,500 square feet). It is unlikely that large-scale printing operations utilizing chlorinated solvents occurred onsite. Based on this information, the former tenant, Sunnyvale Printers, is not expected to represent a significant environmental concern.
- The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used onsite. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely.

Furthermore, the subject property is developed and used for commercial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time. If redevelopment of the subject property is planned for residential use, the owner/user of the report should contact the local planning department to determine whether sampling relating to the former agricultural use of the subject property is required.

Conclusions, Opinions, and Recommendations

We have performed a Phase I Environmental Site Assessment for the property located at 2100-2160 De La Cruz Boulevard in the City of Santa Clara, Santa Clara County, California, in conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property. AEI recommends no further investigations for the subject property at this time.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40CFR Part 312.

APPENDIX H
QUALIFICATIONS

Scott Van de Mark – Associate Consultant

Education:

Yale School of Forestry and Environmental Studies, Master of Environmental Studies,
New Haven, CT

University of Vermont, Bachelor of Arts, Economics and Environmental Studies
Burlington, Vermont

Summary of Professional Experience:

Mr. Van de Mark has over 17 years of experience as an environmental professional in both the for-profit and nonprofit environmental fields. Mr. Van de Mark worked for four years as a staff scientist for a full service environmental consulting company in Falls Church, VA and Pittsburgh, PA. Mr. Van de Mark served as the Director of Special Projects for eleven years at a statewide environmental nonprofit corporation in Pennsylvania.

Staff Scientist responsibilities at Environmental Strategies Corporation from 1987 to 1991 included conducting environmental compliance audits, environmental risk assessments and Phase II environmental site investigations, including extensive surface and groundwater quality monitoring and sampling experience.

As the Director of Special Projects for the Pennsylvania Environmental Council, responsible for the development and management of water quality trading policy and demonstration projects, climate policy and greenhouse inventory projects.

Ellen L. Caldaro – Senior Project Manager

B.S. – Bachelor of Science, Environmental Science, concentration Biology,
Long Island University-Southampton Campus

Ms. Caldaro has over 10 years experience in the environmental service and due diligence industry. Her project experience includes: Phase I Environmental Site Assessments (PHI), Phase II Limited Subsurface Investigations (PHII), and Real Estate Transaction Screens. Ms. Caldaro has implemented long term monitoring programs for regulatory agencies. In addition, Ms. Caldaro has experience in asbestos, lead and mold assessments and sampling.

Project experience for Ms. Caldaro includes:

- Phase I Environmental Site Assessments, Real Estate Transaction Screens and Property Condition Assessments.
- Peer review of Phase I Environmental Site Assessments conducted by technical staff in Florida and Georgia for compliance with Client and ASTM standards.
- The design and implementation of appropriate scopes of work for Phase II soil and groundwater investigations for a variety of suspected contaminants for due diligence and liability purposes.
- Groundwater Monitoring Well Installation and Monitoring Projects.
- The design and implementation of an emergency drench shower and eye wash station compliance inspection program for a local hospital system.

Ms. Caldaro provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments and Transaction Screens.
