Intoximeters Alco Sensor FST "TestSafe" Mouthpiece

In response to the COVID 19 Corona virus, Intoximeters, Inc. has developed the "TestSafe" mouthpiece attachment for the Alco-Sensor FST Device. The TestSafe Mouthpiece provides an additional line of defense to PPE and other safe testing procedures. The TestSafe mouthpiece is designed to trap expelled bacterial and viral particles from an exhaled breath sample.

For the handheld Alco-Sensor FST, the mouthpiece is designed to plug into the current mouthpiece straw, which in turn attaches to the instrument. The TestSafe mouthpiece is a one-time use device. Refer to the attached data sheet for more information.

The Department has purchased 100 TestSafe Mouthpieces to test and evaluate. These mouthpieces will be placed in the PAS mouthpiece tray next to the row of PAS devices in patrol. Please provide feedback on the TestSafe mouthpieces to Sgt. Horn.
