

Upgrade to a smart electric panel and receive a rebate up to \$2,000

Get help with the cost of upgrading to a smart electric panel when switching from natural gas to electric appliances and adding a Level 2 EV charger.

Income-qualified customers may be eligible for bonus incentives up to \$2,000

Traditional electric panels are sized so all appliances can be used at the same time.

Smart panels:

- Monitors electric loads
- Pauses preselected circuits when total energy use exceeds the panel capacity
- Resumes paused loads when usage drops below maximum capacity

Benefits of a smart panel include more efficient use of the electric panel and utility's distribution system, and reduced cost of electric upgrades.
